

Contents

1	Introduction to Graphs	1
1.1	Definitions of Graphs	1
1.2	Some Applications of Graphs	2
1.3	Incidence and Degree	4
1.4	Isomorphism	5
1.5	Complete Graph	7
1.6	Bipartite Graph	7
1.6.1	Complete Bipartite Graph	7
1.7	Directed Graph or Digraph	9
2	Subgraphs, Paths and Connected Graphs	11
2.1	Subgraphs and Spanning Subgraphs (Supergraphs)	11
2.2	Operations on Graphs	12
2.3	Walks, Trails and Paths	14
2.4	Connected Graphs, Disconnected Graphs, and Components	15
2.5	Cycles	17
	Exercises	21
3	Euler Graphs and Hamiltonian Graphs	25
3.1	Euler Tour and Euler Graph	25
3.2	Hamiltonian Path	27
3.2.1	Maximal Non-Hamiltonian Graph	27
3.3	Complement and Self-Complementary Graph	31
	Exercises	32
4	Trees and Fundamental Circuits	35
4.1	Trees	35
4.2	Some Properties of Trees	37

4.3	Spanning Tree and Co-Tree	40
4.3.1	Some Theorems on Spanning Tree	40
4.4	Fundamental Circuits and Fundamental Cut Sets	41
4.4.1	Fundamental Circuits.	41
4.4.2	Fundamental Cut Set	42
	Exercises	46
5	Algorithms on Graphs	49
5.1	Shortest Path Algorithms	49
5.1.1	Dijkstra's Algorithm	49
5.1.2	Floyd–Warshall's Algorithm.	57
5.2	Minimum Spanning Tree Problem	66
5.2.1	Objective of Minimum Spanning Tree Problem	67
5.2.2	Minimum Spanning Tree	68
5.3	Breadth First Search Algorithm to Find the Shortest Path.	78
5.3.1	BFS Algorithm for Construction of a Spanning Tree.	79
5.4	Depth First Search Algorithm for Construction of a Spanning Tree	80
	Exercises	85
6	Matrix Representation on Graphs	95
6.1	Vector Space Associated with a Graph.	95
6.2	Matrix Representation of Graphs	96
6.2.1	Incidence Matrix.	96
6.2.2	Adjacency Matrix	101
6.2.3	Circuit Matrix/Cycle Matrix	105
	Exercises	112
7	Cut Sets and Cut Vertices	115
7.1	Cut Sets and Fundamental Cut Sets	115
7.1.1	Cut Sets.	115
7.1.2	Fundamental Cut Set (or Basic Cut Set)	116
7.2	Cut Vertices	116
7.2.1	Cut Set with respect to a Pair of Vertices	117
7.3	Separable Graph and its Block	118
7.3.1	Separable Graph	118
7.3.2	Block	118
7.4	Edge Connectivity and Vertex Connectivity	119
7.4.1	Edge Connectivity of a Graph	119
7.4.2	Vertex Connectivity of a Graph	119
	Exercises	123

8 Coloring	125
8.1 Properly Colored Graph	125
8.2 Chromatic Number	126
8.3 Chromatic Polynomial	127
8.3.1 Chromatic Number Obtained by Chromatic Polynomial	127
8.3.2 Chromatic Polynomial of a Graph G	128
8.4 Edge Contraction	131
Exercises	133
9 Planar and Dual Graphs	135
9.1 Plane and Planar Graphs	135
9.1.1 Plane Graph	135
9.1.2 Planar Graph	135
9.2 Nonplanar Graph	136
9.3 Embedding and Region	136
9.3.1 Embedding	136
9.3.2 Plane Representation	137
9.4 Regions or Faces	137
9.5 Kuratowski's Two Graphs	137
9.5.1 Kuratowski's First Graph	138
9.5.2 Kuratowski's Second Graph	138
9.6 Euler's Formula	138
9.7 Edge Contractions	143
9.8 Subdivision, Branch Vertex, and Topological Minors	143
9.9 Kuratowski's Theorem	146
9.10 Dual of a Planar Graph	149
9.10.1 To Find the Dual of the Given Graph	149
9.10.2 Relationship Between a Graph and its Dual Graph	151
9.11 Edge Coloring	153
9.11.1 k -Edge Colorable	153
9.11.2 Edge-Chromatic Number	153
9.12 Coloring Planar Graph	154
9.12.1 The Four Color Theorem	154
9.12.2 The Five Color Theorem	155
9.13 Map Coloring	156
Exercises	157
10 Network Flows	159
10.1 Transport Networks and Cuts	159
10.1.1 Transport Network	159
10.1.2 Cut	161

10.2	Max-Flow Min-Cut Theorem	162
10.3	Residual Capacity and Residual Network	165
10.3.1	Residual Capacity	165
10.3.2	Residual Network	166
10.4	Ford-Fulkerson Algorithm	166
10.5	Ford-Fulkerson Algorithm with Modification by Edmonds-Karp	167
10.5.1	Time Complexity of Ford-Fulkerson Algorithm	167
10.5.2	Edmonds-Karp Algorithm	167
10.6	Maximal Flow: Applications	175
10.6.1	Multiple Sources and Sinks	175
10.6.2	Maximum Bipartite Matching	175
	Exercises	176
	Appendix	179
	References	209
	Index	211
