

Contents

1	CAN Estimators from Dependent Observations.	1
1.1	Preliminaries.	1
1.2	Martingales.	3
1.3	Mixing Sequences	4
1.4	Empirical Processes of Dependent Observations	9
1.5	CAN Estimation Under Cramér and Other Regularity Conditions	12
	References	17
2	Markov Chains and Their Extensions.	19
2.1	Markov Chains	19
2.2	Parametric Models.	22
2.3	Extensions of Markov Chain Models	29
2.4	Hidden Markov Chains	31
2.5	Aggregate Data from Finite Markov Chains	36
	References	38
3	Non-Gaussian ARMA Models.	39
3.1	Integer Valued Non-Negative Auto-Regressive Models	39
3.2	Auto-Regressive Models for Continuous Random Variables	41
3.3	Processes Obtained by Minification	44
3.4	Product AR Models	45
3.5	More General Non-Gaussian Sequences	46
3.6	Goodness-of-Fit Procedures	50
	References	52
4	Estimating Functions	55
4.1	Conditional Least Square Estimation	55
4.2	Optimal Estimating Functions	56
4.3	Estimating Functions for Stochastic Models	61

4.4	Estimating Functions for a Vector Parameter	65
4.5	Confidence Intervals Based on Estimating Functions	69
4.6	Combining Correlated Estimating Functions	71
	References	74
5	Estimation of Joint Densities and Conditional Expectation	77
5.1	Introduction	77
5.2	Main Results.	79
	References	83
6	Bootstrap and Other Resampling Procedures	85
6.1	Efron's Bootstrap	85
6.2	Markov Chains	87
6.3	Markov Sequences.	89
6.4	Bootstrap for Stationary and Invertible ARMA Series	91
6.5	AR-Sieve Bootstrap	94
6.6	Block-Based Bootstraps for Stationary Sequences	95
6.7	Other Block-Based Sample Reuse Methods for Stationary Observations.	104
6.8	Resampling Based on Estimating Functions	106
	References	108
	Index	111
