1	Introduction	1
1.1	Introduction	1
1.1.1	Seed (Sexual Propagule)	2
1.2	Seed Transmission of Viruses	2
1.2.1	History of Seed-Transmitted Plant Virus Research	4
1.3	Seed Transmission of <i>Partitiviridae</i>	5
1.4	Seed Transmission of Viroids	5
1.4.1	Extent of Seed Transmission	6
1.5	Viruses Erroneously Listed as Seed Transmitted	7
1.5.1	Seed-Transmitted Plant Virus Names That Appeared Only Once in the Literature	8
1.5.2	Establishing Certain Erotic Positive Seed- Transmitted Viruses to Be Non-seed Transmissible	9
	References	32
2	Identification and Taxonomic Groups	55
2.1	Identification	56
2.2	Classification of Viruses	56
2.3	Variability in Certain Seed-Transmitted Viruses	62
	References	65
3	Economic Significance of Seed-Transmitted Plant Virus Diseases	67
3.1	Introduction	67
3.2	Assessment of Crop Losses	67
3.3	Viruses and Seed Viability	69
3.4	Factors Affecting Yield Losses	69
	References	70
4	Virus Transmission	75
4.1	Vector Transmission	75
4.1.1	Aphids	76
4.1.2	Beetles	77
4.1.3	Thrips	77
4.1.4	Whiteflies	78
4.1.5	Mites	78
4.1.6	Nematodes	78
4.1.7	Bumblebees	79

4.1.8	Fungi	79
4.1.9	Mealybug	79
4.2	Nonvector Transmission	80
4.2.1	Mechanical Spread	80
4.2.2	Wind	80
4.2.3	Water	80
4.2.4	Obligate Symbiosis	80
4.3	Conclusions	81
	References	81
5	Mechanism of Seed Transmission	85
5.1	Embryology and Development of Seed Structures	85
5.2	Distribution of Virus in the Seed	87
5.3	Virus Longevity in Seeds	88
5.4	Genetics of Seed Transmission	88
5.5	Factors Influencing Rate of Seed Transmission	88
5.5.1	Number of Infection Sources	90
5.5.2	Virus Strain/Isolate	90
5.5.3	Mixed Infections	90
5.5.4	Host Species	90
5.5.5	Stage of Infection	92
5.5.6	Environmental Factors	92
5.6	Reasons for Failure of Seed Transmission	93
5.6.1	Inability to Infect Embryos	93
5.6.2	Inability of Virus Survival in the Embryos	94
5.7	Conclusions	95
	References	95
6	Detection of Plant Viruses in Seeds	101
6.1	Introduction	101
6.1.1	Seed Health Testing	102
6.1.2	Low Seed Transmission/ Symptomless Carriers ...	103
6.2	Biological Methods	105
6.2.1	Visual Examination	105
6.2.2	Grow-Out Test	107
6.2.3	Indicator Hosts	108
6.2.4	Biological Properties	109
6.3	Physical Methods	109
6.3.1	Inclusion Bodies	109
6.3.2	Electron Microscopy	111
6.4	Serological Techniques	111
6.4.1	Monoclonal and Polyclonal Antibodies	112
6.4.2	Immunodiffusion Tests	114
6.4.3	Labelled Antibody Techniques	116
6.4.4	Dot-Immunobinding Assay (DIBA or DIA)	126
6.4.5	Disperse Dye Immunoassay (DIA)	128
6.4.6	Rapid Immunofilter Paper Assay (RIPA)	128
6.4.7	Immunosorbent Electron Microscopy (ISEM)	129

6.5	Biotechnology/Molecular Biology-Based Virus Diagnosis .	131
6.5.1	Introduction	131
6.5.2	Molecular Hybridisation	132
6.5.3	Double-Stranded RNA (dsRNA) Analysis	133
6.5.4	Gel Electrophoresis	134
6.5.5	Nucleic Acid-Specific Hybridisation	135
6.5.6	Array Technologies	137
6.5.7	Polymerase Chain Reaction (PCR)-Based Detection	138
6.5.8	Real-Time PCR	143
6.6	Molecular Markers	144
6.7	Conclusions	145
	References	145
7	Ecology and Epidemiology of Seed-Transmitted Viruses	165
7.1	Introduction	166
7.1.1	Primary Inoculum Source	166
7.2	Host Plant	167
7.3	Vectors	170
7.3.1	Factors Influencing Vector Movement	170
7.4	Pollen Transmission	172
7.4.1	Epidemiological Role of Pollen-Transmitted Viruses	173
7.5	Viruses	177
7.6	Conclusion	178
