

Contents

- 1 Rational** 1
 - 1.1 Introduction. 1
 - 1.2 The Problem Statement. 1
 - 1.3 Research Hypothesis and Objectives. 5
 - 1.4 Work Plan and Structure of the Thesis 6
 - 1.5 Chapter Summary 8
 - References 9
- 2 Theoretical Background** 11
 - 2.1 Introduction. 11
 - 2.2 Digital Elevation Model: Sources and Implications 11
 - 2.3 Interpolation Techniques in Drainage Network Estimation 14
 - 2.4 Flood Hazard: Concepts and Definitions. 19
 - 2.5 Types and Causes of Flood Events. 20
 - 2.6 Climate Change and its Variability in Europe 22
 - 2.7 Climate Change Scenario for Barcelonnette Area. 27
 - 2.8 Land Use Change and Anthropogenic Factors 29
 - 2.9 Historical Changes in Land Use in Barcelonnette Area. 31
 - 2.10 Physical Characteristic of Flood Hazard 38
 - 2.11 Presentation of Hazard Assessment 40
 - 2.12 Chapter Summary 41
 - References 42
- 3 Methodology** 51
 - 3.1 Introduction. 51
 - 3.2 DEM Quality Control Modeling 52
 - 3.2.1 Interpolation Techniques. 52
 - 3.2.2 Statistical Analysis 62
 - 3.2.3 Hydrological Analysis 63

3.3	Adding Feature Surface to DEM	65
3.4	RAS: Geometric Data.	65
3.5	Creating Cross Section Using HEC-GeoRAS Model	65
3.6	Discharge Data Modeling	67
3.7	Roughness Values	67
3.8	Calibration Procedures	68
3.9	Hydrodynamic Modeling.	70
3.9.1	Basic Theory of the Models SOBEK and HEC-RAS.	70
3.9.2	Modeling Approaches.	71
3.9.3	HEC-RAS: Calculation Procedures.	71
3.9.4	SOBEK: Calculation Procedures	74
3.9.5	Data Requirements, Processing, and Preparation: Setting Up the Models	77
3.9.6	Output Data.	79
3.10	Scenarios	80
3.10.1	DEM Scenario.	80
3.10.2	River Change Scenario	82
3.10.3	Dyke Scenario	82
3.10.4	Model Scenario	84
3.11	Flood Frequency Analysis.	85
3.11.1	Return Period	85
3.11.2	Gumbel Extreme Value Distribution.	86
3.12	Trend Detection in Hydrometeorological Variables	87
3.12.1	Detection of Randomness	88
3.12.2	Detection of Homogeneity	88
3.12.3	Detection of Trend: Mann–Kendall Test.	89
3.12.4	Sequential Mann–Kendall Test	91
3.13	Land Use Change Modeling	92
3.14	Chapter Summary	92
	References	93
4	Study Area	101
4.1	Introduction.	101
4.2	Barcelonnette Area.	101
4.3	Geographical Characteristics of the Ubaye River in the Whole Watershed	102
4.4	Climate.	104
4.4.1	Precipitation	105
4.4.2	Temperature	107
4.4.3	Snow Depth	107
4.5	Hydrology-Discharge	109
4.6	Land Use	114

4.7	Geology and Geomorphology	117
4.8	Soil	119
4.9	Chapter Summary	121
	References	121
5	Available Data	123
5.1	Introduction.	123
5.2	Data Description	123
5.3	Chapter Summary	125
	References	126
6	Results.	127
6.1	Introduction.	127
6.2	DEM Quality Control Modeling	128
6.2.1	Interpolation Techniques.	128
6.2.2	Statistical Analysis.	131
6.2.3	Hydrological Analysis	140
6.3	Adding Feature Surface to DEM	143
6.4	RAS-Geometric Data	144
6.5	Creating Cross Section in the HEC-GeoRAS Model.	145
6.6	Discharge Data Modeling	147
6.7	Roughness Values	148
6.8	Calibration Procedures	152
6.9	Hydrodynamic Modeling.	155
6.10	Scenarios	155
6.10.1	DEM Scenario.	155
6.10.2	River Change Scenario	166
6.10.3	Dyke Scenario.	173
6.10.4	Model Scenario	189
6.11	Flood Frequency Analysis.	190
6.11.1	Return Period	190
6.11.2	Gumbel Extreme Value Distribution.	195
6.12	Trend Detection in Hydrometeorological Variables	202
6.12.1	Detection of Randomness	203
6.12.2	Detection of Homogeneity	204
6.12.3	Detection of Trend: Mann–Kendall Test	205
6.12.4	Sequential Mann–Kendall Test	206
6.13	Land Use Change Modeling	213
6.14	Chapter Summary	219
	References	220
7	Overall Conclusion and Discussion	221
7.1	Overall Conclusion.	221
7.2	Discussion.	227

8 Perspectives	231
8.1 Risk Analysis and Management	231
8.2 Web-GIS Platform	232
8.3 Application of Remote Sensing-Based Data	232
8.4 Application of GCMs and RCMs Data	233
References	233
Summary	235
Appendix (1)	239
Appendix (2)	241
Appendix (3)	243
Appendix (4)	245

Response of Flood Events to Land Use and Climate
Change

Analyzed by Hydrological and Statistical Modeling in
Barcelonnette, France

Ramesh, A.

2013, XVIII, 249 p., Hardcover

ISBN: 978-94-007-5526-0
