

# Contents

<b>1</b>	<b>The Nature of Minerals and Rocks as Materials</b>	<b>1</b>
1.1	General	1
1.2	The Constitution of Minerals	1
1.2.1	Atomic Bonding	1
1.2.2	Crystal Defects	4
1.2.3	Order–Disorder	7
1.3	The Constitution of Rocks	8
1.3.1	Rocks as Aggregates of Grains	8
1.3.2	Simple Grain Boundaries	9
1.3.3	Solute Segregation, Extra Phases, and Void Space at Grain Boundaries	13
	References	16
<b>2</b>	<b>Thermodynamics</b>	<b>21</b>
2.1	General	21
2.2	Equilibrium Thermodynamics	21
2.3	Non-Equilibrium Thermodynamics	24
	References	28
<b>3</b>	<b>Rate Processes</b>	<b>31</b>
3.1	Introduction	31
3.1.1	General Considerations	31
3.1.2	Theory of Rate Processes	32
3.1.3	Temperature and Pressure Dependence	33
3.2	Reaction Kinetics	35
3.2.1	Thermodynamic Approach	35
3.2.2	Kinetic Approach	36
3.2.3	Statistical Approach to Thermal Activation	37
3.2.4	Stress-Assisted Thermal Activation	39

3.3	Changes in Crystalline Organization . . . . .	41
3.3.1	General . . . . .	41
3.3.2	Recovery . . . . .	41
3.3.3	Recrystallization . . . . .	42
3.3.4	Solid-State Transformations and Reactions. . . . .	43
3.3.5	Dissolution and Crystallization . . . . .	45
3.4	Transport Processes in General . . . . .	46
3.5	Atomic Diffusion. . . . .	48
3.5.1	General . . . . .	48
3.5.2	One Mobile Component. . . . .	49
3.5.3	Multicomponent Diffusion . . . . .	51
3.5.4	Atomic Theory of Diffusion. . . . .	54
3.5.5	Polycrystal Diffusion and High Diffusivity. . . . .	58
3.6	Fluid Permeation . . . . .	59
	References . . . . .	65
<b>4</b>	<b>Mechanical Fundamentals . . . . .</b>	<b>71</b>
4.1	Introduction . . . . .	71
4.2	Phenomenological Approach. . . . .	73
4.3	The Athermal Field . . . . .	74
4.3.1	The Stress–Strain Curve. . . . .	74
4.3.2	Low Temperature Creep . . . . .	75
4.4	The Thermal Field. . . . .	76
4.4.1	Stress-Strain-Time Relationships. . . . .	76
4.4.2	Analysis of “Steady State” Deformation . . . . .	80
4.5	Instabilities and Localization. . . . .	82
4.6	Failure Criteria and Flow Laws for General Stress States. . . . .	84
4.7	Mechanistic Approach . . . . .	87
	References . . . . .	88
<b>5</b>	<b>Deformation Mechanisms: Atomic Transfer Flow . . . . .</b>	<b>91</b>
5.1	A General Model. . . . .	92
5.2	Compatibility Considerations . . . . .	96
5.3	Nabarro-Herring Creep. . . . .	97
5.4	Coble Creep . . . . .	99
5.5	Fluid-Transfer Diffusion Creep . . . . .	99
5.6	Reaction-Controlled Creep . . . . .	100
5.7	Dislocation Climb Creep . . . . .	102
	References . . . . .	104
<b>6</b>	<b>Deformation Mechanisms: Crystal Plasticity . . . . .</b>	<b>107</b>
6.1	Basic Geometry of Slip and Twinning . . . . .	107

6.2	Properties of Dislocations in Crystals. . . . .	113
6.2.1	Theoretical Shear Strength and the Concept of a Dislocation . . . . .	113
6.2.2	The Energy of a Dislocation. . . . .	116
6.2.3	The Peierls Potential . . . . .	119
6.2.4	Kinks and Jogs . . . . .	121
6.2.5	Zonal, Extended and Partial Dislocations. . . . .	123
6.2.6	Dislocation Reactions . . . . .	125
6.2.7	Electric Charge on Dislocations . . . . .	126
6.2.8	Dislocations in Minerals . . . . .	127
6.3	Dislocation Interactions . . . . .	128
6.3.1	Interaction with Point Defects . . . . .	129
6.3.2	Interaction with Dispersed Second Phases . . . . .	132
6.3.3	Interaction with Boundaries . . . . .	132
6.3.4	Mutual Interactions Between Dislocations . . . . .	133
6.4	Dislocation Velocity . . . . .	134
6.4.1	Glide Velocity . . . . .	135
6.4.2	Cross-Slip Velocity of Screw Dislocations. . . . .	138
6.4.3	Climb Velocity of Edge Dislocations. . . . .	139
6.5	Dislocation Populations and Their Evolution. . . . .	141
6.5.1	The Configuration of the Dislocation Assemblage. . . . .	141
6.5.2	Dislocation Density and Multiplication . . . . .	147
6.5.3	Recovery and Recrystallization. . . . .	148
6.6	Dislocation Theories of Flow in Single Crystals . . . . .	149
6.6.1	Introduction: Athermal and Thermal Models . . . . .	149
6.6.2	Athermal Models Based on Discrete Obstacles. . . . .	154
6.6.3	Athermal Models Based on Mutual Dislocation Interaction. . . . .	159
6.6.4	Creep in the Athermal Regime . . . . .	163
6.6.5	Thermal Models Based on Viscous Drag. . . . .	165
6.6.6	Thermal Models Based on Mutual Dislocation Interaction. . . . .	168
6.6.7	Thermal Models for Precipitate and Particle Effects . . . .	173
6.7	Dynamics of Mechanical Twinning . . . . .	176
6.8	Crystal Plasticity in Polycrystalline Aggregates. . . . .	177
6.8.1	Introduction: The Compatibility Problem. . . . .	177
6.8.2	Multiplicity of Micromechanisms: The von Mises Criterion. . . . .	179
6.8.3	Grain Boundary Effects and Grain Size Dependence. . . .	182
6.8.4	Relation of Single Crystal to Polycrystal Flow Stresses . . . . .	183
6.8.5	Preferred Orientations and Large Strains . . . . .	186
6.8.6	Polyphase Aggregates . . . . .	187

6.9	The Role of Pressure . . . . .	190
6.9.1	General . . . . .	190
6.9.2	Pressure Effects in the Athermal Regime . . . . .	191
6.9.3	Pressure Effects in the Thermal Regime . . . . .	193
	References . . . . .	198
<b>7</b>	<b>Deformation Mechanisms: Granular Flow . . . . .</b>	<b>209</b>
7.1	Basic Concepts: Kinematics, Compatibility, Dilatancy . . . . .	209
7.1.1	Introduction . . . . .	209
7.1.2	The Pattern of Relative Translations of Granules . . . . .	210
7.1.3	Granule–Granule Relationships at their Boundaries . . . . .	213
7.1.4	Fabric and Memory . . . . .	214
7.2	Granular Flow Controlled by Frictional and Cataclastic Effects . . . . .	215
7.2.1	Introduction . . . . .	215
7.2.2	Pure Particulate Flow . . . . .	215
7.2.3	Cataclastic Granular Flow . . . . .	222
7.2.4	Cohesive Granular Flow . . . . .	224
7.2.5	Effect of Temperature: Creep . . . . .	225
7.3	Granular Flow Controlled by Thermally-Activated Processes . . . . .	227
7.3.1	Introduction: superplasticity . . . . .	227
7.3.2	Mechanisms of Temperature-Sensitive Granular Flow . . . . .	228
7.3.3	A Semi-empirical Theoretical Approach . . . . .	231
	References . . . . .	235
	<b>Index . . . . .</b>	<b>245</b>
