<b>1 Concepts of Soil</b>	<b>1</b>
1.1 Different People Have Different Concepts of Soil	1
1.2 There Are Many Different Definitions of Soil	1
1.3 All Loose Materials on the Surface of the Earth Are Not Soils	2
1.4 Soil Is Not Land Itself; It Is a Part of Land	2
1.5 Soil Is a Natural Body	2
1.6 Soil Is a Three-Dimensional Body	2
1.7 Soil Is a Dynamic Body	3
1.8 Soil Is a Transformer of Energy	3
1.9 Soil Is a Recycler of Materials	3
1.10 Soil Is a Purifier of Water	4
1.11 Soil Is an Ecosystem	4
1.12 Soil Is a Component of the Environment	5
1.13 Major Components of Soils Vary in Volume Proportions	6
1.14 Soil Is a Medium of Plant Growth	6
Study Questions	6
References	6
<b>2 Soil as a Part of the Lithosphere</b>	<b>9</b>
2.1 Lithosphere Is the Outermost Part of the Earth	9
2.2 Lithosphere Interacts with Atmosphere, Hydrosphere, and Biosphere to Form the Pedosphere	9
2.3 Eight Chemical Elements Constitute the Bulk of the Earth's Crust	10
2.4 Chemical Elements in the Earth's Crust Form Minerals Under Natural Conditions	10
2.5 Silicate Minerals Are Important Rock and Soil Constituents	10
2.6 Some Other Minerals Are Also Abundant in Soil	11
2.7 A Few Minerals Constitute the Bulk of the Earth's Crust	11
2.8 Rocks Are Aggregates of Minerals	11
2.9 Igneous Rocks Are Formed by Solidification of Magma and Lava	11
2.10 Sedimentary Rocks Are Mainly Formed by Lithification of Sediments	12
2.11 Metamorphic Rocks Are Formed from Preexisting Rocks by Change in Solid State	12
2.12 Sedimentary Rocks Predominate in the Earth's Surface While Igneous Rocks in the Crust	12
2.13 Soil Characteristics Differ on Rock and Mineral Sources	12
2.14 Weathering Is the Disintegration and Decomposition of Rocks and Minerals	13
2.14.1 Thermal Weathering Is Caused by Variation in Temperature	14
2.14.2 Mechanical Weathering Is Caused by Water, Glacier, Wind, and Organisms	14
2.14.3 Chemical Weathering Brings Chemical Changes in Rocks and Minerals	14

2.14.4	Physical and Chemical Weathering May Enhance Each Other.....	15
2.14.5	The Rate of Weathering Varies with Minerals and Climate.....	15
Study Questions	.....	16
References	.....	16
<b>3</b>	<b>Factors and Processes of Soil Formation</b> .....	17
3.1	A Soil Profile May Be Differentiated into Several Horizons.....	17
3.1.1	There May Be Subordinate Distinctions of Master Horizons.....	18
3.2	Soil-Forming Factors Are Framed in the Fundamental Soil-Forming Equation.....	18
3.3	Soil Formation Depends on the Interaction of Soil-Forming Factors.....	19
3.4	There Are Diverse Effects of Climate on Soil Formation.....	19
3.4.1	Pedoclimate May Be More Important than Atmospheric Climate .....	20
3.4.2	Climate Changes with Time.....	21
3.5	Organisms Provide Organic Inputs and Biochemical Transformations.....	22
3.5.1	Human Affects Soil Formation .....	22
3.6	Parent Material Provides Raw Materials for Soil Development.....	23
3.6.1	Parent Materials Are Diverse in Origin and Characteristics .....	23
3.6.2	Mineral Parent Materials May Be Residual or Transported .....	23
3.7	Relief Is the Configuration of Land Surface .....	25
3.8	Soil Grows and Matures with Time .....	25
3.9	Basic Soil-Forming Processes Operate in the Formation of All Soils.....	26
3.9.1	Additions Are the Inputs of Materials and Energy in Soil.....	26
3.9.2	Soil Materials Are Removed by Physical, Chemical, and Biological processes.....	26
3.9.3	Transformations in Soil Are Physical, Chemical, and Biological in Nature .....	27
3.9.4	Materials in Soil Are Translocated in All Directions .....	27
3.10	Specific Soil-Forming Processes Produce Specific Soils.....	27
3.10.1	Laterization and Latosolization Occur Mainly in Humid Tropics.....	28
3.10.2	Ferralitization Is a Result of Strong Weathering in Tropical Climate .....	28
3.10.3	Podzolization Is the Accumulation of Clay and Humus in Subsoil Under Humid Climate .....	28
3.10.4	Calcification Is the Enrichment of Lime in Soil Profiles .....	28
3.10.5	Salinization and Desalinization Are Processes of Salt Accumulation and Removal, Respectively.....	29
3.10.6	Mottling and Gleization Occur Through Redox Transformations.....	29
Study Questions	.....	29
References	.....	29
<b>4</b>	<b>Soil Classification</b> .....	31
4.1	Soil Taxonomy Is the Most Popularly Used Soil Classification System .....	31
4.2	There Are Some Diagnostic Horizons in Soil Taxonomy.....	32
4.3	Soil Moisture Regimes Indicate Soil Moisture Status .....	33
4.4	Soil Temperature Regimes Differ in Mean Annual and Mean Seasonal Soil Temperatures .....	34
4.5	There Are Some Other Diagnostic Features in Soil Taxonomy.....	34
4.6	There Are Six Categories in Soil Taxonomy .....	34
4.7	Each Soil Order Has Its Own Characteristic Features .....	35

4.7.1	Alfisols Are Well-Developed Soils with High Base Status .....	35
4.7.2	Andisols Are Soils with Andic (Volcanic Ash) Properties .....	36
4.7.3	Aridisols Are Soils of Drylands.....	36
4.7.4	Entisols Are Young Soils That Lack Horizon Development .....	37
4.7.5	Gelisols Are Soils of the Cold Zone .....	38
4.7.6	Histosols Are Soils Developed from Organic Soil Materials .....	38
4.7.7	Inceptisols Are Soils That Show Beginning of Horizon Differentiation .....	39
4.7.8	Mollisols Are Soils of the Grasslands.....	39
4.7.9	Oxisols Are Highly Weathered Tropical Soils with Enrichment of Kaolinite and Oxides of Fe, Al, and Mn.....	40
4.7.10	Spodosols Are Soils with Accumulation of Amorphous Mixtures of Organic Matter and Aluminum in B Horizon .....	41
4.7.11	Ultisols Are Low Base Status Soils with an Argillic or a Kandic Horizon.....	41
4.7.12	Vertisols Are Soils That Crack Deeply and Widely Upon Drying.....	42
4.8	FAO/UNESCO Soil Classification Is Now World Reference Base for Soil Resources .....	42
4.8.1	Correlation of Reference Soil Groups of WRB with Soil Taxonomy.....	47
	Study Questions .....	48
	References.....	48
<b>5</b>	<b>Physical Properties of Soil.....</b>	<b>49</b>
5.1	Soil Has Varied Colors.....	49
5.2	Soils Are Composed of Various Sized Mineral Particles .....	50
5.2.1	Soil Particles Are Classified According to Size.....	50
5.2.2	Close Packing of Soil Particles Creates Some Degree of Fineness or Coarseness Known as Soil Texture .....	50
5.2.3	There Are 12 Soil Textural Classes.....	51
5.2.4	Soil Texture Regulates Soil Behavior .....	51
5.2.5	Crop Plants Need Favorable Soil Textures .....	52
5.2.6	Soil Texture Is Not Easily Altered .....	52
5.3	Soil Structure Is the Arrangement of Soil Particles .....	52
5.3.1	Classes of Soil Structure Are Based on Size of Aggregates .....	53
5.3.2	Grades of Soil Structure Refer to Stability of Peds .....	53
5.3.3	Formation of Soil Structure Results from Complex Processes.....	53
5.3.4	“Soil Structure Is the Key to Soil Fertility” .....	55
5.3.5	Unlike Soil Texture, Soil Structure May Readily Be Altered.....	55
5.3.6	Puddling Is the Process of Destruction of Soil Structure.....	55
5.4	Density Is the Mass Per Unit Volume .....	56
5.5	Pores Are Void Spaces Between Soil Particles and Aggregates .....	56
5.5.1	Percentage of Soil Volume Occupied by Pores Is Known as Porosity .....	57
5.5.2	Anything That Affects Bulk Density Also Affects Porosity.....	57
5.6	Consistence Is Resistance of Soil to Deformation Under Pressure .....	58
5.7	Soils Get Warmth Mainly from Solar Radiation.....	58
5.7.1	Heat Capacity of Unit Mass Is Known as Specific Heat.....	59
5.7.2	Soil Components Differ in Thermal Conductivity and Diffusivity.....	59
5.7.3	Reflectivity of Incident Radiation Is Called Albedo.....	59
5.7.4	Environment and Soil Conditions Affect Soil Temperature .....	60
5.7.5	Soil Temperature Is Related to Air Temperature .....	61
5.7.6	Soil Temperature Regulates Soil Processes and Plant Growth .....	61

5.7.7	Soil Temperature May Be Controlled by Soil Moisture and Soil Cover.....	62
5.8	Soil Air Has a Composition Slightly Different from Atmospheric Air .....	63
5.8.1	Soil Properties, Climate, and Management Affect Soil Air Composition.....	63
5.8.2	Renewal of Soil Air Occurs by Mass Flow and Diffusion.....	63
5.8.3	Soil Air Affects Other Soil Properties and Growth of Plants and Microorganisms.....	64
	Study Questions .....	65
	References.....	65
<b>6</b>	<b>Soil Water, Irrigation, and Drainage.....</b>	<b>67</b>
6.1	Freshwater Is a Limited Resource.....	67
6.2	Movement of Water Through Biosphere, Hydrosphere, Lithosphere, and Atmosphere Forms the Hydrological Cycle.....	67
6.2.1	Precipitation .....	67
6.2.2	Interception .....	68
6.2.3	Evapotranspiration .....	68
6.2.4	Infiltration .....	69
6.2.5	Percolation .....	69
6.2.6	Runoff .....	69
6.3	Some Forces Attract Water in Soil.....	69
6.4	Adhesion and Cohesion Are Forces of Water Retention in Soils .....	69
6.5	Soil Water Content May Be Expressed on Volume and Mass Basis .....	70
6.5.1	Degree of Saturation .....	70
6.6	There Are Several Forms of Soil Water .....	71
6.6.1	Hygroscopic Water.....	71
6.6.2	Gravitational Water .....	71
6.6.3	Capillary Water .....	71
6.7	There Are Some Soil Moisture Constants .....	71
6.7.1	Hygroscopic Coefficient .....	71
6.7.2	Maximum Water-Holding Capacity.....	71
6.7.3	Field Capacity .....	71
6.7.4	Permanent Wilting Point.....	72
6.8	Water That Can Be Absorbed by Plants Is Available Water .....	72
6.9	Water Potential Expresses Energy Relationships of Water.....	73
6.9.1	Matric Potential, $\psi_m$ .....	73
6.9.2	Osmotic Potential, $\psi_s$ .....	73
6.9.3	Pressure Potential, $\psi_p$ .....	73
6.9.4	Gravitational Potential, $\psi_g$ .....	73
6.10	Soil Water Content Can Be Expressed in Relation to Soil Moisture Suction .....	74
6.11	Hysteresis Expresses the Lag of Water Content at the Same Water Potential During Wetting and Drying .....	74
6.12	Soil Water Moves in Saturated and Unsaturated Conditions .....	74
6.12.1	Poiseuille's Equation.....	75
6.12.2	Darcy's Equation.....	75
6.12.3	Saturated Hydraulic Conductivity.....	75
6.12.4	Unsaturated Flow .....	75
6.13	Plant Water Moves Along a Potential Gradient .....	76
6.14	Soil Water Regulates Plant Growth.....	77
6.15	Plants Suffer from Water Stress in Some Situation .....	77
6.16	Some Plants Have the Capacity to Tolerate or Avoid Drought.....	77
6.17	Crop Water Requirement Varies with Crop Types.....	78
6.18	Water Supply Influences Crop Quality .....	78

6.19	Irrigation Water Requirement Includes Crop Water Requirement and Others .....	78
6.19.1	Crop Water Use Efficiency .....	79
6.19.2	Full Irrigation .....	79
6.19.3	Deficit Irrigation.....	79
6.20	Choice of Irrigation Methods Depends on Crop Types and Farm Facilities .....	79
6.20.1	Surface Irrigation .....	80
6.20.2	Uncontrolled Flooding .....	80
6.20.3	Controlled Flooding .....	80
6.20.4	Sprinkler Irrigation.....	81
6.20.5	Drip Irrigation .....	82
6.20.6	Subsurface Irrigation.....	82
6.21	Irrigation Water Should Be of Proper Quality .....	82
6.22	Over Irrigation Is Harmful .....	84
6.23	Waterlogging Is Undesirable for Most Crops .....	84
6.24	Drainage May Be Natural or Artificial .....	84
6.25	Some Land Needs Artificial Drainage .....	85
6.25.1	There Are Many Artificial Drainage Systems.....	85
	Study Questions .....	87
	References.....	87
<b>7</b>	<b>Soil Organic Matter .....</b>	<b>89</b>
7.1	Soil Organic Matter Is a Vital Component of Soil.....	89
7.2	There Are Three Categories of Soil Organic Matter.....	89
7.3	Composition of Soil Organic Matter Is Variable .....	90
7.4	Many Factors Affect Soil Organic Matter Content.....	90
7.5	Soil Organic Matter Performs Many Physical, Chemical, and Biological Functions .....	91
7.6	Humification Is a Complex Process of Decomposition and Resynthesis .....	92
7.7	Managing Soil Organic Matter Is Necessary for Sustainable Soil Fertility .....	93
7.8	Carbon–Nitrogen Ratio Is an Important Index of SOM Decomposition .....	94
7.9	SOM Fractions Represent Different Ages and Rates of Turnover.....	94
7.10	Soil Organic Matter Contributes to Carbon Sequestration .....	95
	Study Questions .....	95
	References.....	95
<b>8</b>	<b>Chemical Properties of Soil.....</b>	<b>97</b>
8.1	Soils Are Composed of Chemical Elements.....	97
8.2	Water in Soil with Dissolved Substances Forms Soil Solution.....	97
8.3	Soil Colloids Are Very Fine Soil Particles.....	98
8.3.1	Inorganic Soil Colloids Mainly Include Aluminosilicate Clay Minerals .....	98
8.3.2	Organic Colloids Are Derivatives of Humus .....	99
8.3.3	Soil Colloids Have Unique Properties .....	99
8.3.4	There Are Electric Charges on Soil Colloids.....	100
8.4	The Soil Is a Seat of Diverse Chemical Reactions.....	101
8.4.1	The Equilibrium Constant Represents the Solubility Product in Dissolution Reactions.....	101
8.4.2	Chelation Is the Complexation of Metals with Organic Substances.....	102
8.4.3	Precipitation Is the Separation of Substances from Solution.....	102
8.4.4	Adsorption Is the Attraction of Gas, Liquid, or Solid on Surfaces of Colloids .....	102

8.4.5	Ion Exchange Is the Replacement of One Ion from Colloidal Surface by Another.....	104
8.5	Soil Reaction Is the State of Acidity or Alkalinity in a Soil.....	106
8.5.1	Soil pH Is Measured from Soil–Water Suspensions .....	106
8.5.2	The pH Value May Be Estimated from $H^+$ and $OH^-$ Ion Concentrations .....	106
8.5.3	Soils Are Classified into Different Categories of Acidity and Alkalinity on the Basis of pH .....	107
8.5.4	Plant Growth Depends on Soil pH.....	108
8.5.5	Plants Have Preferences for pH .....	109
8.5.6	Acidity May Be Active or Reserve .....	109
8.5.7	Soils Have Some Capacity to Resist Change in pH.....	109
8.6	Redox Potential Is the Tendency of a Substance to Accept Electrons.....	109
8.6.1	Aeration Governs Redox Potential in Soil.....	110
8.6.2	There Is a Relationship Between pH and $E_h$ of Soils.....	110
	Study Questions .....	110
	References.....	111
<b>9</b>	<b>Biological Properties of Soils.....</b>	<b>113</b>
9.1	Plant Roots, Rhizoplane, and Rhizosphere Are Unique Ecological Niches.....	113
9.2	Mycorrhizas Are Fungal Roots That Extend Enormously the Adsorbing Surface.....	114
9.3	Soil Organisms Include Macro- and Microflora and Fauna.....	115
9.3.1	Soil Fauna Are Diverse in Population and Function.....	115
9.3.2	Soil Microflora Include Bacteria, Fungi, and Algae .....	119
9.4	Carbon, Nitrogen, Phosphorus, and Sulfur Cycles Are Biogeochemical Cycles.....	121
9.4.1	Carbon Cycle Involves Release and Fixation of $CO_2$ to and from the Atmosphere .....	121
9.4.2	Nitrogen Moves Through Soil–Organism– Atmosphere Pathway in a Cycle .....	122
9.4.3	Phosphorus Cycle Involves Transformations of Organic and Inorganic Phosphorus Substances.....	125
9.4.4	Oxidation and Reduction Are the Main Processes of Sulfur Cycling.....	126
9.5	Management and Properties of Soils Affect Population and Function of Soil Microorganisms.....	127
	Study Questions .....	128
	References.....	128
<b>10</b>	<b>Plant Nutrients and Soil Fertility Management.....</b>	<b>129</b>
10.1	Soil Fertility Is the Capacity of Soils to Supply Plant Nutrients .....	129
10.2	A Nutrient Is a Chemical Element Needed for Normal Growth and Reproduction of Plants.....	129
10.2.1	Nitrogen Constitutes Chlorophyll, Proteins, Enzymes, Nucleic Acids, and Many Other Compounds in Plant .....	130
10.2.2	Phosphorus Constitutes Nucleic Acids, Phospholipids, and Phosphoproteins .....	130
10.2.3	Sulfur Constitutes Some Proteins and Activates Many Enzymes.....	131
10.2.4	Potassium Activates Many Enzymes, Enhances Carbohydrate and Protein Synthesis, and Acts as an Osmoregulator.....	131
10.2.5	Calcium Is a Constituent of Cell Wall and Activator of Many Enzymes .....	132

10.2.6	Magnesium Is a Constituent of Chlorophyll and Activator of Many Enzymes.....	132
10.2.7	Iron Acts in Electron Transfer in Plant Body .....	133
10.2.8	Manganese Acts in Nitrate Assimilation, Hill Reaction, and Electron Transfer.....	133
10.2.9	Copper Is a Structural Element in Regulatory Proteins and a Cofactor of Many Enzymes.....	133
10.2.10	Molybdenum Regulates Nitrogen Metabolism in Plants .....	134
10.2.11	Boron Contributes to Cell Wall Development and Cell Division .....	134
10.2.12	Zinc Is a Constituent of All Six Classes of Enzymes .....	135
10.2.13	Chlorine Controls Stomatal Opening and Internal Water Balance.....	135
10.2.14	Nickel Is a Component of a Number of Enzymes .....	136
10.3	There Are Positive and Negative Interactions of Nutrients in Plant .....	136
10.4	Plants Absorb 14 Nutrients from the Soil .....	137
10.4.1	Soils Should Supply Adequate Nutrients to Plants for Optimum Growth.....	137
10.4.2	Nutrients in Soil May Be Available or Unavailable to Plants.....	137
10.5	Nitrogen Remains Mainly in the Organic Form in Soil.....	138
10.5.1	Nitrate Leaching from Soils Causes Groundwater Contamination.....	138
10.5.2	Soil Is a Source of Atmospheric Nitrogen Oxides.....	138
10.6	Phosphorus Is an Element of Agronomic and Environmental Significance .....	139
10.6.1	Three Major Phosphorus Pools in Soil Include Solution and Active and Fixed Phosphorus .....	139
10.6.2	Inorganic Phosphorus Is One Major Fraction of Soil Phosphorus.....	139
10.6.3	Organic Phosphorus Is Another Major Fraction .....	140
10.6.4	Availability of Phosphorus in Soil Is Governed by Its Chemical Environment .....	140
10.6.5	Phosphorus Availability Is Judged from Its Chemical Extractability.....	140
10.6.6	Inorganic Phosphorus in Soil Undergoes Precipitation–Dissolution Reactions.....	141
10.6.7	Phosphate Sorption–Desorption Regulates Phosphorus Availability in Soil.....	141
10.6.8	Soil Phosphorus May Affect Water Quality.....	142
10.7	Sulfur in Soils Come from Mineral and Organic Matter .....	142
10.8	Potassium in Soil Remains in Soluble, Exchangeable, Fixed, and Mineral-Bound Forms .....	142
10.9	Calcium in Soil Is Both a Nutrient and a Soil Conditioner.....	143
10.10	Magnesium Behaves Similarly to Calcium in Soil .....	143
10.11	Iron Is a Micronutrient and a Marker of Soil Genesis .....	143
10.12	Manganese Is an Active Redox Reactant in Soil .....	144
10.13	Weathered, Leached, and Acid Soils Have Relatively Low Copper Levels.....	144
10.14	Fine-Textured Soils Generally Contain More Zinc Than Sandy Soils .....	144
10.15	Molybdenum Availability Increases with Increasing Soil pH .....	145
10.16	Tourmaline Is the Main Mineral Source of Boron in Soil .....	145
10.17	Chloride Is the Most Mobile Anion in Soils.....	145
10.18	Soils Around Industries Contain the Highest Nickel.....	145
10.19	Nutrients Interact in Soils .....	145

10.20	Any Material That Provides Crops with a Nutrient Is a Fertilizer.....	146
10.20.1	Industrial Fertilizers Are Synthetic Products.....	146
10.20.2	Organic Fertilizers Are Natural Materials .....	150
10.21	Determining the Kind and Dose of Fertilizer Is Called Fertility Evaluation .....	151
10.21.1	Visual Symptoms May Indicate Nutrient Deficiency and Toxicity .....	152
10.21.2	Tissue Test Indicates Nutrient Status in Plants .....	152
10.21.3	Soil Test Is an Efficient Tool of Fertility Evaluation .....	154
10.21.4	Pot Experiments Are Closely Observed Small-Scale Fertilizer Trials.....	155
10.21.5	Field Trials Are Large-Scale Fertilizer Experiments .....	155
10.22	Fertilizer Application Methods Depend on Crops and Fertilizers .....	156
	Study Questions .....	157
	References.....	157
<b>11</b>	<b>Problem Soils and Their Management.....</b>	<b>161</b>
11.1	Problem Soils Have Limitations to Cultivation .....	161
11.2	Dryland Soils Need Sustainable Management for Food Security.....	161
11.2.1	Aridity and Salinity Are the Problems of Dryland Soils .....	161
11.2.2	Some Crops Are Suitable for Drylands .....	162
11.2.3	Supplemental Irrigation Reduces the Risk of Crop Failure .....	162
11.2.4	Mulching Reduces Evaporation Loss of Soil Water .....	163
11.3	Steep Soils Should Be Left Under Natural Condition .....	163
11.4	Low Water Retention Capacity and Low Fertility Are the Problems of Sandy Soils .....	164
11.5	Deep and Wide Cracks and Undesirable Consistence Are the Problems of Vertisols .....	164
11.6	Acid Soils Need Liming and Acid-Tolerant Crops .....	165
11.6.1	Liming Increases Soil pH.....	166
11.7	Acid Sulfate Soils Need Liming and Soil Washing .....	168
11.7.1	Applying Lime.....	169
11.8	Saline and Sodic Soils Are Common in Arid and Coastal Regions .....	169
11.8.1	Saline Soils Accumulate Natural Salts .....	169
11.8.2	Sodic Soils Have High Exchangeable Sodium .....	170
11.8.3	Saline–Sodic Soils Are Both Saline and Sodic.....	172
11.9	Peat May Be Productive, but Reclaiming Peat Soil Is Risky.....	172
	Study Questions .....	173
	References.....	173
<b>12</b>	<b>Soil Resources and Soil Degradation.....</b>	<b>175</b>
12.1	Soil Is a Natural Resource.....	175
12.1.1	There Are Nine Land Quality Classes .....	176
12.2	Soil Degradation Is the Exhaustion of Soil’s Potential to Serve Desired Function.....	176
12.2.1	There Are Five Main Types of Soil Degradation .....	178
12.2.2	Soil Degradation May Be Due to Natural and Anthropogenic Causes .....	178
12.3	Physical Degradation of Soil Includes Compaction, Surface Sealing, and Erosion .....	178
12.3.1	Soil Compaction Is the Consolidation Under Pressure.....	178
12.3.2	Desertification Occurs Mainly in Arid and Semiarid Regions .....	181
12.3.3	Soil Erosion Is the Detachment and Transport of Soil Particles.....	182
12.3.4	There Are Vegetative and Engineering Methods of Erosion Control.....	187

12.3.5	Wind Erosion Is Caused by Blowing Wind .....	190
12.4	Chemical Soil Degradation Results in Undesirable Changes .....	192
12.4.1	Anthropogenic Activities May Lead to Soil Acidification .....	192
12.4.2	Soil Salinization May Result from Soil Mismanagement.....	193
12.4.3	Soils Are Often Polluted by Human Activities .....	194
	Study Questions .....	210
	References .....	210
<b>13</b>	<b>Wetland Soils .....</b>	<b>215</b>
13.1	Wetlands Are Defined in Many Different Ways .....	215
13.2	Wetlands Are Kidneys of Nature .....	215
13.3	Many Wetlands Have Already Been Lost.....	216
13.4	There are Different Types of Wetlands .....	216
13.5	Different Wetland Types Have Different Characteristics.....	217
13.6	There Are Discharge and Recharge Wetlands .....	219
13.7	Wetland Soils Are Varied as Varied Are Wetland Types .....	219
13.7.1	Wetland Mineral Soils Have Mineral Parent Materials .....	220
13.7.2	Wetland Organic Soils Have Organic Soil Materials .....	221
13.7.3	Rice-Based Cropping Patterns Are the Most Important Land Use in Wetland Soils.....	221
13.7.4	A Sequence of Reduction Reactions Occur After Flooding a Soil .....	223
13.7.5	Subaqueous Soils Lie Underwater .....	224
13.8	Nutrient Transformations in Wetland Soils Occur in Low Redox Potentials .....	224
13.8.1	Nitrogen Undergoes Mineralization, Immobilization, Nitrification, Fixation, and Denitrification.....	224
13.8.2	Phosphorus Undergoes Mineralization, Immobilization, Solubilization, and Sorption.....	225
13.8.3	Sulfur Undergoes Mineralization, Immobilization, Oxidation, and Reduction .....	226
	Study Questions .....	226
	References .....	226
<b>14</b>	<b>Forest Soils .....</b>	<b>229</b>
14.1	What Is a Forest and Where Is It Found?.....	229
14.2	Forests Perform Many Important Ecological Functions .....	229
14.3	There Are Many Different Types of Forests .....	229
14.4	There Are Three Main Ecological Types of Natural Forests in the World.....	230
14.4.1	Tropical Forests Are Rich and Diverse .....	230
14.4.2	Temperate Forests Are Relatively Low-Diversity Forests .....	231
14.4.3	Boreal Forests Occur in the Cold Zone.....	231
14.5	Forest Soils Are Soils That Have Developed Under Forest Vegetation.....	231
14.6	Characteristics of Forest Soils That Distinguish Them from Agricultural Soils .....	231
14.6.1	Forest Soils Have Some Limitations in Agricultural Standards .....	231
14.6.2	Forest Soils Bear Permanent Vegetation .....	232
14.6.3	Forest Soil Has Thick Vegetative Covers.....	232
14.6.4	Forest Trees Have Deep Root Systems .....	232
14.6.5	Forest Soils Develop Through Natural Succession.....	232
14.6.6	Forest Soils Usually Possess a Forest Floor.....	233
14.7	Forest Soils Have Some Differences from Agricultural Soils .....	235

14.8	Forest Soils Develop Through Different Processes .....	235
14.9	Different Forest Ecosystems Have Different Soils .....	235
14.9.1	Oxisols and Ultisols Are Typical Tropical Forest Soils.....	236
14.9.2	Alfisols and Spodosols Are Typical Temperate Forest Soils .....	236
14.9.3	Gelisols Are the Typical Boreal Forest Soils .....	237
14.10	There Is a Long History of Plantation Forestry .....	237
14.11	Major Plantation Tree Species Vary with Regions .....	238
14.12	Forest Trees Have Their Own Soil Requirement.....	238
14.13	Forest Plantations Influence Soil Properties .....	239
14.14	Agroforestry Involves Growing Trees and Crops Together .....	240
14.14.1	Alley Cropping.....	241
14.14.2	Silvopasture.....	241
14.15	Deforestation Causes Environmental Degradation .....	241
14.16	Shifting Cultivation Enhances Soil Erosion.....	242
14.17	Nutrient Cycling Maintains Productivity in Forest Ecosystems.....	243
14.17.1	Nutrient Cycling Involves Pools and Fluxes.....	243
14.17.2	Nutrient Recycling Is a Part of the Nutrient Cycling.....	244
14.18	Forests and Forest Soils Are Important Carbon Sequesters.....	247
	Study Questions .....	248
	References.....	249
<b>15</b>	<b>Climate Change and Soil .....</b>	<b>253</b>
15.1	Weather Is a Short-Term and Climate Is a Long-Term Phenomenon .....	253
15.2	Climate Has Significant Effect on Crop and Soil Management.....	253
15.3	Climate Is Changing .....	254
15.3.1	Climate Change Would Lead to Global Warming .....	254
15.3.2	Arctic Sea Ice Would Melt Away.....	254
15.3.3	Rising Sea Level Would Affect Coastal Environments .....	254
15.3.4	Hurricanes, Floods, and Droughts Would Be More Frequent.....	255
15.4	Properties and Functions of Soil Would Change in Response to Climate Change .....	255
15.4.1	Increased CO <sub>2</sub> May Enhance Biomass Production .....	256
15.4.2	Climate Change May Lead to Enhanced Decomposition of Soil Organic Matter .....	256
15.4.3	Climate Change Would Increase Evapotranspiration .....	256
15.4.4	Climate Change Would Make Many Soils Saline.....	257
15.4.5	Climate Change Would Alter Composition and Functions of Soil Microorganisms .....	257
15.4.6	Temperature Rise May Lead to Permafrost Thawing .....	257
15.5	Global Circulation Models Predict Future Climate and Its Impact .....	259
15.6	Soil Management Should Also Aim at Mitigating Climate Change and Adapting to It .....	259
	Study Questions .....	260
	References.....	260
