

Contents

1 Basic Concepts	1
1.1 Introduction	1
1.2 Hydrosystem	2
1.3 Risk and Reliability	2
1.4 Risk Assessment and Management	3
1.5 Uncertainty	4
1.5.1 Purpose of Uncertainty Analysis	5
1.5.2 Measurement of Risk and Uncertainty	5
References	7
2 Probability Theories	9
2.1 Review of Probability Theory	9
2.2 Probability Concepts	10
2.3 Random Variables	12
2.4 Moments of Distribution	14
2.4.1 Estimate Moments From Data Series	18
2.5 Two Random Variables	21
2.6 Commonly Used Probability Distributions in Hydrosystem Engineering	26
2.6.1 Binomial Distribution	26
2.6.2 Poisson Distribution	30
2.6.3 Normal Distribution	31
2.6.4 Log-Normal Distribution	34
2.6.5 Exponential Distribution	37
2.6.6 Gamma Distribution	39
2.6.7 Beta Distribution	42
2.6.8 Uniform Distribution	43
References	44

3 Risk and Uncertainty Analysis	45
3.1 Basic Concept of Uncertainty	45
3.2 Uncertainty Analysis	46
3.2.1 Analytical Techniques	47
3.3 Basic Concepts of Risk and Reliability	51
3.4 Safety Factor and Safety Margin	52
3.5 Performance Function	53
3.6 Reliability Index	55
3.7 First-Order Second-Moment Method	61
3.7.1 Mean-Value First-Order Second-Moment Method	61
3.8 Probabilistic Point Estimation Methods	65
3.8.1 Rosenblueth's Point Estimation Method	66
3.8.2 Bivariate RPEM	69
3.9 Reliability Analysis of Complex System	71
3.9.1 Event-Tree	72
3.9.2 Fault-Tree	73
References	76
4 Monte Carlo Simulation	77
4.1 Introduction	77
4.2 Basics of Monte Carlo Simulation	78
4.3 Generation of Random Numbers	78
4.4 CDF-inverse Method (Continuous Case)	80
4.5 Acceptance-Rejection Method	84
4.6 Generation Random Variates from Probability Distributions	86
4.6.1 Normal Distribution	86
4.6.2 Lognormal Distribution	88
4.6.3 Exponential Distribution	90
4.7 Monte Carlo Integration	91
4.7.1 One-Dimensional Monte Carlo Integration	91
4.7.2 Two-Dimensional Monte Carlo Integration	93
4.8 Hit-and-Miss Method	94
4.9 Variance-Reduction Techniques	99
References	100
5 Evaluation of Dam Overtopping Risk Based on Univariate Frequency Analysis	101
5.1 Introduction	101
5.2 Dam Risk Model	103
5.2.1 Risk Modeling for Flood and Wind Overtopping	105
5.3 Reservoir Routing	106
5.4 Wind Model	106

5.5	Uncertainty Analysis	108
5.5.1	Monte Carlo Simulation	108
5.5.2	Latin Hypercube Sampling	109
5.6	Overtopping Risk for an Existing Dam	110
5.6.1	Study Area and Data Collection	110
5.6.2	Flood Frequency Analysis	111
5.6.3	Wind Frequency Analysis	112
5.6.4	Uncertain Variables	113
5.6.5	Overtopping Risk Due to Different Floods	114
5.6.6	Overtopping Risk Due to Flood and Wind	115
5.7	Conclusions	117
5.8	Future Studies	120
	References	120
6	Evaluation of Dam Overtopping Risk Based on Univariate and Bivariate Flood Frequency Analyses	123
6.1	Introduction	123
6.2	Bivariate Frequency Analysis	125
6.3	Reservoir Routing Analysis	127
6.4	Risk and Uncertainty Analysis	127
6.5	Case Study	128
6.6	Outlier Test	129
6.7	Determination of Uncertainty Factors	129
6.8	Univariate Flood Frequency Analysis	131
6.9	Bivariate Flood Frequency Analysis	133
6.10	Overtopping Risk Based on Univariate Flood Frequency	135
6.11	Overtopping Risk Based on Bivariate Flood Frequency	135
6.12	Conclusion	138
	References	140
	Appendix A	143
	Appendix B	149
	Appendix C	153
	Index	155

Introduction to Risk and Uncertainty in Hydrosystem
Engineering

Goodarzi, E.; Ziaei, M.; Teang Shui, L.

2013, XIII, 157 p., Hardcover

ISBN: 978-94-007-5850-6
