1	Introduction	1
	Kenneth Diest	
1.1	Introduction	1
1.2	Ancient Metamaterials	2
1.3	Modern Metamaterials	3
1.3.1	Publications	4
1.3.2	Fabrication	6
1.3.3	Modeling	8
1.3.4	The Union of Fields	14
1.4	Design	16
1.4.1	Optical Properties of Metals	16
1.4.2	Current Designs	22
1.4.3	Future Designs	24
	References	25
2	An Overview of Mathematical Methods for Numerical Optimization	31
	Daniel E. Marthaler	
2.1	Introduction	31
2.2	Mathematical Optimization	32
2.3	Finding Solutions	34
2.4	Algorithms Utilizing Gradient Information	36
2.4.1	Unconstrained Nonlinear Optimization	36
2.4.2	Constrained Nonlinear Optimization	39
2.5	Gradient-Free Algorithms	43
2.5.1	Direct Methods	43
2.5.2	Surrogate Methods	46
2.5.3	Stochastic Search Algorithms	48
2.6	Summary	50
	References	51

3	Optimization with Surrogate Models	55
	Tom Schaul	
3.1	Introduction	55
3.2	Background	57
3.3	Artificial Curiosity	57
3.3.1	Artificial Curiosity as a Guide for Optimization	58
3.3.2	Formal Framework	59
3.4	Exploration–Exploitation Trade-Off	60
3.4.1	Exploration Objective: Information Gain	60
3.4.2	Exploitation Objective: Expected Cost Improvement	60
3.4.3	Combining the Objectives	60
3.5	Curiosity-driven Optimization	62
3.5.1	Models of Expected Cost and Information Gain	62
3.5.2	A Good Model Choice: Gaussian Processes	62
3.5.3	Derivation of Gaussian Process Information Gain	63
3.5.4	Curiosity-Driven Optimization with Gaussian Processes	64
3.6	Minimal Asymptotic Requirements	65
3.6.1	Reaching Optima at Arbitrary Distance	65
3.6.2	Locating Optima with Arbitrary Precision	66
3.6.3	Guaranteed to Find Global Optimum	66
3.6.4	Proof-of-Concept	67
3.7	Discussion	67
	References	69
4	Metamaterial Design by Mesh Adaptive Direct Search	71
	Charles Audet, Kenneth Diest, Sébastien Le Digabel, Luke A. Sweatlock, and Daniel E. Marthaler	
4.1	Introduction	71
4.1.1	Structuring the Optimization Problem	72
4.2	The Mesh Adaptive Direct Search Class of Algorithms	73
4.2.1	General Organization of the MADS Algorithm	73
4.2.2	Handling of Constraints	76
4.2.3	Surrogates and Models	78
4.2.4	Convergence Analysis	81
4.3	NOMAD: A C++ Implementation of the MADS Algorithm	82
4.3.1	Batch and Library Modes	83
4.3.2	Important Algorithmic Parameters	84
4.3.3	Extensions of MADS	85
4.4	Metamaterial Design Using NOMAD	86
4.4.1	Split Ring Resonator Optimization	86
4.4.2	Split Ring Resonator Filters	89
4.4.3	Coupling Quantum Dots to Split-Ring Resonators	90
	References	94

5	Nature Inspired Optimization Techniques for Metamaterial Design	97
	Douglas H. Werner, Jeremy A. Bossard, Zikri Bayraktar, Zhi Hao Jiang, Micah D. Gregory, and Pingjuan L. Werner	
5.1	Introduction	97
5.2	Nature Inspired Optimization Methods	99
5.2.1	Genetic Algorithms	100
5.2.2	Particle Swarm Optimization	103
5.2.3	Covariance Matrix Adaptation Evolutionary Strategy (CMA-ES) Optimization	105
5.3	Metamaterial Surface Optimization Examples	111
5.3.1	Metallo-Dielectric Metamaterial Absorbers for the Infrared	112
5.3.2	Double-Sided AMC Ground Planes for RF	114
5.3.3	Matched Magneto-Dielectric RF Absorbers	118
5.4	Homogenized Metamaterial Optimization Examples	122
5.4.1	Homogenization Technique for an Isotropic Planar Slab	123
5.4.2	Anisotropic Inversion Technique	124
5.4.3	Low-Loss, Multilayer Negative Index Metamaterials for the Infrared and RF	128
5.4.4	Wide-Angle Zero Index Metamaterials for the IR	134
5.4.5	Dispersion Engineering Broadband Negative–Zero–Positive Index Metamaterials	137
	References	142
6	Objective-First Nanophotonic Design	147
	Jesse Lu and Jelena Vuckovic	
6.1	Introduction	147
6.2	The Electromagnetic Wave Equation	148
6.2.1	Physics Formulation	148
6.2.2	Numerical Formulation	149
6.2.3	Solving for H	149
6.2.4	Solving for ϵ^{-1}	150
6.2.5	Bi-linearity of the Wave Equation	150
6.3	The Objective-First Design Problem	151
6.3.1	Design Objectives	151
6.3.2	Convexity	151
6.3.3	Typical Design Formulation	152
6.3.4	Objective-First Design Formulation	152
6.3.5	Field Sub-problem	154
6.3.6	Structure Sub-problem	154
6.3.7	Alternating Directions	154
6.4	Waveguide Coupler Design	155
6.4.1	Choice of Design Objective	156
6.4.2	Application of the Objective-First Strategy	157
6.4.3	Coupling to a Wide, Low-Index Waveguide	157
6.4.4	Mode Converter	158

6.4.5	Coupling to an Air-Core Waveguide Mode	159
6.4.6	Coupling to a Metal–Insulator–Metal and Metal Wire Plasmonic Waveguides	159
6.5	Optical Cloak Design	161
6.5.1	Application of the Objective-First Strategy	161
6.5.2	Anti-reflection Coating	161
6.5.3	Wrap-Around Cloak	162
6.5.4	Open-Channel Cloak	162
6.5.5	Channeling Cloak	164
6.6	Optical Mimic Design	164
6.6.1	Application of the Objective-First Strategy	166
6.6.2	Plasmonic Cylinder Mimic	166
6.6.3	Diffraction-Limited Lens Mimic	167
6.6.4	Sub-diffraction Lens Mimic	169
6.6.5	Sub-diffraction Optical Mask	170
6.7	Extending the Method	170
6.7.1	Three-Dimensional Design	171
6.7.2	Multi-mode	171
6.7.3	Binary Structure	171
6.7.4	Robustness	172
6.8	Conclusions	172
