

Contents

1	Introduction	1
1.1	Global Energy Scenario	2
1.2	Threats to Natural Resources	3
1.3	Potential of Hydropower as Possible Alternative	4
1.4	Different Decision-Making Algorithms	6
1.5	Objective and Brief Methodology	7
1.6	Locations Considered as Alternatives	8
1.6.1	The Chenab	8
1.6.2	The Danube	9
1.6.3	The Youkon	11
	References	12
2	Hydropower Plants	15
2.1	Classification of Hydropower Plants	15
2.1.1	Classification with respect to Quantity of Water Available	15
2.1.2	Classification According to Availability of Water Head	17
2.1.3	Classification According to Nature of Load	17
2.2	Advantages of Hydroelectric Plants	18
2.3	Disadvantages of Hydro-Electric Plants	18
	References	19
3	Decision Making Methodology	21
3.1	Procedures of Decision Making	21
3.2	Multi-Attribute Decision Making	23
3.3	Performance Metrics: KAPPA Coefficient of Agreements	24
3.3.1	Interpretation of KAPPA Coefficient of Agreement	25
	References	26
4	Nature-Based Algorithms	27
4.1	Artificial Neural Networks	27
4.2	Genetic Algorithms	29

4.3	Fuzzy Logic	30
4.4	BAT Algorithm.	31
4.5	Analytical Hierarchy Process	31
4.5.1	Advantage of the Analytical Hierarchy Process	31
4.5.2	Principle of the Analytical Hierarchy Process.	32
4.5.3	Steps of the Analytical Hierarchy Process	32
	References	33
5	Methodology	35
5.1	Decision-Making Factors for HPP Location Selection	35
5.2	Nature-Based Algorithm.	39
	References	55
6	Result and Discussion.	57
7	Conclusion.	69
7.1	Limitations	72
7.2	Future Scope.	73

Decision Making Algorithms for Hydro-Power Plant
Location

Majumder, M.; Ghosh, S.

2013, VI, 73 p. 6 illus., Softcover

ISBN: 978-981-4451-62-8
