Part I Distribution Theory and Models

1	Progressive Censoring: Data and Models	3
1.1	Progressively Censored Data	4
1.1.1	Progressive Type-II Censoring	5
1.1.2	Progressive Type-I Censoring	10
1.1.3	Progressive Hybrid Censoring	14
1.2	Probabilistic Models in Progressive Censoring	19
2	Progressive Type-II Censoring: Distribution Theory	21
2.1	Joint Distribution	21
2.2	Connection to Generalized Order Statistics and Sequential Order Statistics	24
2.3	Results for Particular Population Distributions	26
2.3.1	Exponential Distributions	26
2.3.2	Reflected Power Distribution and Uniform Distribution	31
2.3.3	Pareto Distributions	33
2.3.4	Progressive Withdrawal and Dual Generalized Order Statistics	33
2.4	Marginal Distributions	35
2.4.1	Exponential Distribution	36
2.4.2	Uniform Distribution	38
2.4.3	General Distributions	38
2.5	Conditional Distributions	44
2.5.1	Markov Property	44
2.5.2	Distributions of Generalized Spacings	46
2.5.3	Block Independence of Progressively Type-II Censored Order Statistics	47
2.5.4	Dependence Structure of Progressively Type-II Censored Order Statistics	51

2.6	Basic Recurrence Relations	53
2.7	Shape of Density Functions	55
2.7.1	Log-Concavity of Uniform Progressively Type-II Censored Order Statistics	56
2.7.2	The Shape of Densities of Uniform Progressively Type-II Censored Order Statistics	57
2.7.3	Unimodality and Log-Concavity of Progressively Type-II Censored Order Statistics Based on F	59
2.8	Discrete Progressively Type-II Censored Order Statistics	61
2.9	Exceedances	65
3	Further Distributional Results on Progressive Type-II Censoring	67
3.1	Characterizations by Progressively Type-II Censored Order Statistics	67
3.1.1	Characterizations by Independence Properties	67
3.1.2	Characterizations by Distributional Properties	69
3.1.3	Characterizations via Regression	70
3.1.4	Characterizations for Discrete Parents	78
3.2	Stochastic Ordering of Progressively Type-II Censored Order Statistics	82
3.2.1	Univariate Stochastic Orders and Its Applications to Progressively Type-II Censored Order Statistics	82
3.2.2	Multivariate Stochastic Orderings and Its Applications to Progressively Type-II Censored Order Statistics	92
3.2.3	Applications to Spacings of Progressively Type-II Censored Order Statistics	95
3.3	Aging Properties	97
3.4	Asymptotic and Extreme Value Results	98
3.4.1	Extreme Value Analysis for Order Statistics	98
3.4.2	Extreme Value Analysis for Progressively Type-II Censored Order Statistics	99
3.4.3	Extreme Value Analysis for Exponential Progressively Type-II Censored order statistics	102
3.4.4	Extreme Value Analysis for Progressively Type-II Censored Order Statistics from a Cumulative Distribution Function F	103
3.4.5	Applications to Upper, Lower, Central, and Intermediate Progressively Type-II Censored Order Statistics	106
3.4.6	Limits for Central Progressively Type-II Censored Order Statistics with Blocked Observations ..	109

3.5	Near Minimum Progressively Type-II Censored Order Statistics	112
4	Progressive Type-I Censoring: Basic Properties	115
4.1	Distribution and Block Independence	115
4.2	Number of Observations	122
5	Progressive Hybrid Censoring: Distributions and Properties	125
5.1	Type-I Progressive Hybrid Censoring	125
5.1.1	Spacings for Exponential Distribution	127
5.1.2	Distributions of Total Time on Test and Related Statistics	130
5.1.3	Moment Generating Function	132
5.2	Type-II Progressive Hybrid Censoring	136
5.2.1	Exponential Distributions	137
5.3	Generalized Progressive Hybrid Censoring	140
6	Adaptive Progressive Type-II Censoring and Related Models	143
6.1	General Model of Adaptive Progressive Type-II Censoring	144
6.2	Particular Models	150
6.2.1	Nonadaptive Type-II Progressive Censoring	150
6.2.2	Ng–Kundu–Chan Model	150
6.2.3	Flexible Progressive Censoring	151
6.2.4	Progressive Censoring with Random Removals	152
7	Moments of Progressively Type-II Censored Order Statistics	155
7.1	General Distributions	155
7.1.1	Representations for Moments	155
7.1.2	Existence of Moments	156
7.2	Moments for Particular Distributions	161
7.2.1	Exponential Distribution	161
7.2.2	Weibull Distributions	162
7.2.3	Reflected Power Distribution	163
7.2.4	Uniform Distribution	164
7.2.5	Pareto Distribution	165
7.2.6	Lomax Distribution	166
7.2.7	Extreme Value Distribution	166
7.3	Recurrence Relations for Moments	167
7.3.1	General Results	167
7.3.2	Results for Particular Distributions	167
7.4	Moments for Symmetric Distributions	179
7.5	Bounds for Moments	182
7.5.1	Bounds Based on the Cauchy–Schwarz Inequality	182
7.5.2	Bound Based on the Method of Greatest Convex Minorant	184
7.5.3	Further Bounds	187
7.6	First-Order Approximations to Moments	190

8	Simulation of Progressively Censored Order Statistics	193
8.1	Generation of Progressively Type-II Censored Order Statistics ..	193
8.1.1	Generation of General Progressively Type-II Censored Order Statistics	196
8.1.2	Generation of Progressively Type-II Censored Order Statistics from a One-Step Censoring Plan	197
8.1.3	Simulation of Progressively Hybrid Censored Data	197
8.2	Progressively Type-I Censored Data	198
8.3	Progressively Type-I Interval Censored Data	199
9	Information Measures	201
9.1	Fisher Information in Progressively Type-II Censored Samples	201
9.1.1	Hazard Rate Representation of Fisher Information	201
9.1.2	Fisher Information via Missing Information Principle ..	206
9.1.3	Fisher Information for Particular Distributions	209
9.1.4	Recurrence Relations for Fisher Information	212
9.2	Fisher Information in Progressive Hybrid Censoring	214
9.3	Tukey's Linear Sensitivity Measure	215
9.4	Entropy	216
9.5	Kullback–Leibler Information	221
9.6	Pitman Closeness	224
10	Progressive Type-II Censoring Under Nonstandard Conditions	229
10.1	Mixture Representation for Progressively Type-II Censored Order Statistics with Arbitrary Distribution	229
10.2	Joint Density Function of Progressively Type-II Censored Order Statistics	231
10.3	Dependence Structure of INID Progressively Type-II Censored Order Statistics	239
10.4	Dependence and Copulas	241
10.5	Progressive Type-II Censoring for Multivariate Observations	243

Part II Inference

11	Linear Estimation in Progressive Type-II Censoring	247
11.1	Preliminaries	247
11.1.1	Least-Squares Estimation	248
11.1.2	Linear Equivariant Estimation	250
11.1.3	First-Order Approximations to BLUEs and BLEEs	251
11.2	Linear Estimation for Particular Distributions	252
11.2.1	Exponential Distributions	252
11.2.2	Generalized Pareto Distributions	255
11.2.3	Weibull and Extreme Value Distributions	262

11.2.4	Laplace Distribution	263
11.2.5	Logistic Distributions	265
11.3	Asymptotic Best Linear Unbiased Estimators for Blocked Progressively Type-II Censored Order Statistics	265
12	Maximum Likelihood Estimation in Progressive Type-II Censoring	267
12.1	Exponential Distribution	268
12.2	Weibull Distribution	274
12.3	Reflected Power Distribution	277
12.4	Uniform Distribution	280
12.5	Pareto Distributions	281
12.6	Laplace Distribution	286
12.7	Some Other Location–Scale Families	295
12.7.1	Weibull Distributions	296
12.7.2	Normal Distributions	297
12.7.3	Log-Normal Distributions	299
12.7.4	Extreme Value Distribution (Type I)	300
12.7.5	Logistic Distribution	300
12.8	Other Distributions	301
12.9	Related Methods	303
12.9.1	Modified Maximum Likelihood Estimation	304
12.9.2	Approximate Maximum Likelihood Estimation	305
12.10	M -Estimation	308
12.11	Order Restricted Inference	310
13	Point Estimation in Progressive Type-I Censoring	313
13.1	Exponential Distribution	314
13.1.1	One-Parameter Exponential Distribution	314
13.1.2	Two-Parameter Exponential Distribution	317
13.1.3	Modified Moment Estimation	319
13.2	Weibull Distributions	320
13.3	Extreme Value Distributions	322
13.4	Normal Distribution	322
13.5	Burr-XII Distribution	324
13.6	Logistic Distributions	325
14	Progressive Hybrid and Adaptive Censoring and Related Inference	327
14.1	Likelihood Inference for Type-I Progressive Hybrid Censored Data	328
14.1.1	Likelihood Inference for Two-Parameter Exponential Distributions	328
14.1.2	Other Distributions	334

14.2	Likelihood Inference for Type-II Progressive Hybrid Censored Data	335
14.2.1	Exponential Distribution	335
14.2.2	Other Distributions	336
14.3	Inferential Results for Adaptive Progressive Type-II Censoring	336
14.3.1	Ng–Kundu–Chan Model	338
14.3.2	Progressive Censoring with Random Removals	339
15	Bayesian Inference for Progressively Type-II Censored Data	341
15.1	Exponential and Weibull Distributions	342
15.2	Rayleigh Distribution	347
15.3	Pareto Distribution	349
15.4	Burr Distributions	351
15.5	Other Distributions	352
16	Point Prediction from Progressively Type-II Censored Samples	355
16.1	Prediction Concepts	355
16.2	Prediction of Failure Times of Censored Units	357
16.2.1	Exponential Distribution	358
16.2.2	Extreme Value Distribution	363
16.2.3	Normal Distribution	366
16.2.4	Pareto Distributions	369
16.3	Prediction of Future Observations	372
16.3.1	Linear Prediction	372
16.3.2	Bayesian Prediction	373
17	Statistical Intervals for Progressively Type-II Censored Data	379
17.1	Exact Confidence Intervals	379
17.1.1	Exponential Distribution	379
17.1.2	Weibull Distribution	384
17.1.3	Pareto Distribution	388
17.1.4	Other Parametric Distributions	391
17.1.5	Nonparametric Confidence Intervals for Quantiles	392
17.1.6	An Excursus: Two-Sample Nonparametric Confidence Intervals from Type-II Censored Data	398
17.2	Conditional Statistical Intervals	402
17.2.1	Inference in a General Location–Scale Family	402
17.2.2	Exponential Distribution	406
17.2.3	Extreme Value Distribution	406
17.2.4	Log-Gamma Distribution	409
17.2.5	Pareto Distribution	410
17.2.6	Laplace Distribution	411
17.2.7	Other Distributions	414
17.3	Asymptotic Confidence Intervals	414

17.4	Prediction Intervals	415
17.4.1	Nonparametric Prediction Intervals	415
17.4.2	Parametric and Bayesian Prediction	415
17.5	Nonparametric Tolerance Intervals	418
17.6	Highest Posterior Density Credible Intervals	418
18	Progressive Type-I Interval Censored Data	421
18.1	Parametric Inference	421
18.2	Optimal Inspection Times	424
18.3	Optimal Progressive Interval Censoring Proportions	425
19	Goodness-of-Fit Tests in Progressive Type-II Censoring	427
19.1	Tests on Exponentiality	427
19.2	Goodness-of-Fit Tests for Other Distributional Assumptions	431
19.2.1	Methods Based on Spacings and Deviation from the Uniform Distribution	431
19.2.2	Tests Based on Empirical Distribution Function	434
19.2.3	Tests Based on Kullback–Leibler Distance	436
20	Counting and Quantile Processes and Progressive Censoring	439
20.1	Counting Process Approach	439
20.1.1	Semiparametric Proportional Hazards Model	447
20.2	Quantile Process Approach	448
21	Nonparametric Inferential Issues in Progressive Type-II Censoring	451
21.1	Precedence-Type Nonparametric Tests	451
21.1.1	Precedence-Type Nonparametric Tests with Progressive Censoring	452
21.1.2	Tests for Hazard Rate Ordering	461
 Part III Applications in Survival Analysis and Reliability		
22	Acceptance Sampling Plans	467
22.1	Exponential Distribution	468
22.1.1	Acceptance Sampling Plans Without Consumer Risk	468
22.1.2	Acceptance Sampling Plans with Consumer Risk	472
22.1.3	Bayesian Variable Sampling Plans with Progressive Hybrid Censoring	474
22.2	Weibull Distribution	475
22.3	Log-Normal Distribution	476
22.4	Reliability Sampling Plans for Interval Censored Data	476
22.5	Capability Indices	477
22.5.1	Exponential Progressively Type-II Censored Order Statistics	477
22.5.2	Other Distributions	480

23	Accelerated Life Testing	481
23.1	Step-Stress Models	481
23.1.1	Inference for Simple Step-Stress Model Under Progressive Type-II Censoring	483
23.1.2	Inference for a Simple Step-Stress Model with Random Change Under Progressive Type-II Censoring	490
23.1.3	Inference for Multiple Step-Stress Model Under Progressive Type-I Censoring	495
23.1.4	Multiple Step-Stress Model with Progressive Censoring: An Approach Based on Sequential Order Statistics	503
23.2	Progressive Stress Models	503
24	Stress–Strength Models with Progressively Censored Data	507
24.1	Exponentially Distributed Stress and Strength	508
24.1.1	Exponentially Distributed Stress and Strength with Known Location Parameter	508
24.1.2	Exponentially Distributed Stress and Strength with Common Unknown Location Parameter	509
24.2	Further Stress–Strength Distributions	512
25	Multi-sample Models	515
25.1	Competing Risk Models	515
25.1.1	Model and Notation	515
25.1.2	Exponential Distribution	516
25.1.3	Weibull Distributions	520
25.1.4	Lomax Distribution	522
25.2	Joint Progressive Censoring	523
25.3	Concomitants	525
25.3.1	Missing Information Principle and EM-Algorithm	527
25.4	Progressively Censored Systems Data	528
25.4.1	Progressive First-Failure Censoring: Series Systems	529
25.4.2	Parallel Systems	529
26	Optimal Experimental Designs	531
26.1	Preliminaries	532
26.2	Probabilistic Criteria	534
26.3	Precision of Estimates	536
26.3.1	Exponential Distribution	538
26.3.2	Generalized Pareto Distributions	538
26.3.3	Extreme Value Distribution	542
26.3.4	Further Distributions	542
26.4	Maximum Fisher Information	544
26.4.1	Single Parameter Case	544

26.4.2	Two-Parameter Case	552
26.4.3	Asymptotically Optimal Censoring Schemes	557
26.4.4	Maximum Fisher Information Plans in Progressive Hybrid Censoring	559
26.5	Other Optimality Criteria and Approaches	559
26.5.1	Maximum Entropy Plans	559
26.5.2	Optimal Estimation of Quantiles	560
26.5.3	Optimization Based on Pitman Closeness	562
26.5.4	Optimal Block Censoring	565
26.5.5	Other Criteria for Optimal Censoring Plans	570
Appendix A	Distributions	571
A.1	Definitions of Distributions	571
A.2	Definitions and Preliminaries	574
A.2.1	Quantile Function	574
A.2.2	Stochastic Orders	575
Appendix B	Additional Demonstrative Data Sets	579
B.1	Progressively Type-II Censored Data	579
B.2	Progressively Type-I Censored Data	581
Notation		585
