
Contents

1	Computational Foundation in Transportation and Transportation Systems Modeling	1
1.1	Introduction	1
1.2	Transportation and Transportation Systems Sector	3
1.3	Models and Their Mathematical Notation	5
1.4	Modeling Formalisms	8
1.4.1	General Formalisms	8
1.4.2	State Models	16
1.4.3	Methodological Principles	19
1.5	Model Validation	30
1.6	Case Study in Transportation Systems Analysis	33
1.7	Exercises	41
	References and Further Readings	42
2	Transportation Models	45
2.1	Introduction	45
2.2	Traffic Flow Models	49
2.2.1	Uncongested Traffic Conditions	50
2.2.2	Congested Traffic Conditions	50
2.2.3	Flow-Density and Speed-Flow Graphs	51
2.2.4	Traffic Flow Scenarios	53
2.2.5	Traffic Flow Behavior	56
2.3	Queuing Models	57
2.3.1	Little's Law	59
2.3.2	Queuing Systems Attributes and Disciplines	61
2.3.3	Queuing Systems Parameters and Performance Measures	65
2.3.4	Kendall's Notation	67
2.3.5	Inventory System	70
2.3.6	Simulation Languages	71
2.3.7	Probability in Queuing Systems	72

2.4	Traffic Demand Models	75
2.5	Congested Network Models	78
2.6	Graph Models	81
2.7	Bottleneck Analysis	85
2.8	ProModel Case Study: Road Intersection	92
2.9	Exercises	104
	References and Further Readings	106
3	Traffic Assignments to Transportation Networks	109
3.1	Introduction	110
3.2	Uncongested Network	112
3.3	Congested Network	113
3.4	Equilibrium Assignment	114
3.5	Multiclass Assignment	117
3.6	Dynamic Traffic Assignment	120
3.7	Transportation Network Synthesis	124
3.8	Case Study: Diverging Diamond Interchange	125
3.8.1	Model Results: Traffic Volume	131
3.8.2	Model Results: Length of Time Traffic Light Green	132
3.8.3	Model Results: Rule for Traffic Light	134
3.9	Exercises	136
	References and Further Readings	137
4	Integration Framework and Empirical Evaluation	139
4.1	Introduction	139
4.2	Overview of the Framework Architecture	142
4.2.1	SOA	142
4.2.2	HLA	143
4.3	Ontology-Based Modeling and Integration in Transportation	152
4.4	Workflow-Based Application Integration in Transportation	155
4.5	Marine Terminal Operation Simulation and Its Empirical Evaluation	156
4.5.1	Marine Terminal Operation Simulation Model	159
4.6	Airport Operation Simulation and Its Empirical Evaluation	165
4.6.1	UML Activity Diagrams	169
4.6.2	SimEvents Model	173
4.6.3	A-SMGCS	178
4.6.4	Runway Incursion	180
4.7	Highway Operation Simulation and Its Empirical Evaluation	183
4.7.1	Swarm Behavior	186
4.8	Vehicle Tracking Based on the Internet of Things Paradigm	189
4.9	Exercises	191
	References and Further Readings	192

5	Simulation Tools in Transportation	195
5.1	Introduction	195
5.2	Classification of Simulation Systems	196
5.2.1	Block-Oriented Simulation Systems	197
5.2.2	Equation-Oriented Simulation Systems	202
5.2.3	Summary of Simulation Systems	203
5.3	Discrete-Event Simulation Systems	206
5.4	Object-Oriented Simulation	213
5.5	Online Simulation	215
5.6	ProModel Case Study in Transportation Analysis	217
5.7	Exercises	225
	References and Further Readings	226
6	Transportation Use Cases	229
6.1	Introduction	230
6.1.1	Model Verification and Validation	234
6.1.2	Model Starting and Stopping Conditions	234
6.1.3	Model Reaches Steady State or Equilibrium	235
6.1.4	Length of Simulation to Achieve Good Results or Sample Size	235
6.1.5	Statistical Confidence Intervals on Simulation Results	237
6.1.6	Analyzing Simulation Results	237
6.2	Coal Terminal Simulation	238
6.2.1	Introduction	238
6.2.2	Coal Terminal Model	238
6.2.3	Ship Unloading and Loading Submodel	241
6.2.4	Verification and Validation	242
6.2.5	Analysis of Results	242
6.2.6	Conclusion	246
6.3	Container Terminal Simulation	247
6.3.1	Introduction	247
6.3.2	Container Terminal Model	248
6.3.3	Ship Unloading and Loading of Container Submodel	249
6.3.4	Verification and Validation	251
6.3.5	Analysis and Results	252
6.3.6	Conclusion	257
6.4	Intermodal Container Terminal Simulation	257
6.4.1	Introduction	257
6.4.2	Intermodal Center	258
6.4.3	Simulation Model	258
6.4.4	Experimental Design	260
6.4.5	Removal of Resources from Baseline Simulation Run 1	264
6.4.6	Increase in Entity Arrivals	266
6.4.7	Removal of Resources from Revised Model	268
6.4.8	Planning for Additional Growth	270
6.4.9	Conclusion	272

6.5	Port Security Inspection	274
6.5.1	Introduction	274
6.5.2	Simulation Model	275
6.5.3	Experimental Design	276
6.5.4	Analysis	282
6.5.5	Conclusion	283
6.6	Interstate Traffic Congestion Simulation Model	284
6.6.1	Introduction	284
6.6.2	Process Model	285
6.6.3	Experimental Design	286
6.6.4	Baseline Simulation Run 1 Results	287
6.6.5	Analysis	290
6.6.6	Conclusions	291
6.7	Interstate Tunnel Traffic Simulation Model	292
6.7.1	Introduction	292
6.7.2	Simulation Model	293
6.7.3	Verification and Validation	293
6.7.4	Experimental Design	294
6.7.5	Baseline Simulation Run	295
6.7.6	Increase in Directional Traffic Split	296
6.7.7	Increase in Truck Traffic	297
6.7.8	Decrease in Passenger Car Traffic and Increase in Truck Traffic	298
6.7.9	Conclusions	298
6.8	Passenger and Freight Operation Airport Simulation Model	300
6.8.1	Introduction	300
6.8.2	Airport Land Side	302
6.8.3	Model Implementation in SimEvents	303
6.8.4	Results	310
6.9	International Student Team Project: Modeling and Simulating an Airport Transportation Operation	311
6.9.1	Introduction	311
6.9.2	Principles of Operation on the Airport Ramp	312
6.9.3	Data Analysis	314
6.9.4	Description of the Model of the Second Scenario	316
6.9.5	Simulation Results	322
6.9.6	Aviation Operation Modeling	323
6.9.7	Scenario Analysis	330
6.9.8	Conclusions	332
	References and Further Readings	333
	Index	335

Introduction to Transportation Analysis, Modeling and
Simulation

Computational Foundations and Multimodal
Applications
