

# Contents

- 1 Introduction . . . . . 1**
  - 1.1 Design via Simulation . . . . . 1
  - 1.2 Single Physics Versus Multiphysics Simulation. . . . . 3
  - 1.3 Challenges of Multiphysics Simulation. . . . . 5
  - 1.4 The Role of Structural Optimization Methods. . . . . 6
    - 1.4.1 Topology Optimization . . . . . 7
    - 1.4.2 Size and Shape Optimization . . . . . 8
  - References . . . . . 9
  
- 2 Overview of Physics for Electromechanical Systems . . . . . 11**
  - 2.1 Electronic System Components . . . . . 12
  - 2.2 Magnetic Components . . . . . 14
  - 2.3 RF Components. . . . . 15
  - 2.4 Motors and Actuators. . . . . 17
  - References . . . . . 19
  
- 3 Governing Equations for Electromechanical Systems. . . . . 21**
  - 3.1 Single Physics Structural Mechanics Example. . . . . 21
  - 3.2 Joule Heating . . . . . 25
  - 3.3 Thermal Stress . . . . . 27
  - 3.4 Conjugate Heat Transfer. . . . . 28
  - 3.5 Low Frequency Electromagnetics . . . . . 30
  - 3.6 High Frequency Electromagnetics . . . . . 34
  - References . . . . . 39
  
- 4 Optimization Methods for Electromechanical Systems. . . . . 41**
  - 4.1 Topology Optimization. . . . . 41
    - 4.1.1 Level Set Function Approach . . . . . 52
  - 4.2 Parametric Size Analysis . . . . . 55
  - References . . . . . 57

<b>5 Electromechanical System Simulation and Optimization Studies . . . . .</b>	<b>61</b>
5.1 Electronic System Component Analysis and Design . . . . .	62
5.1.1 Design Optimization of Electrothermal Systems . . . . .	63
5.1.2 Design Optimization of Thermal-Structural Systems . . . . .	68
5.1.3 Design Optimization of Thermal-Fluid Systems . . . . .	76
5.1.4 Design Optimization of Thermomagnetic Convective Systems . . . . .	90
5.1.5 Design Optimization of Thermal Composites . . . . .	100
5.2 Magnetic Component Analysis and Design . . . . .	113
5.2.1 Multiphysics Analysis of Magnetic Components . . . . .	114
5.2.2 Analysis Example: 2-D Inductor Model . . . . .	116
5.2.3 Design Optimization of 2-D Inductor . . . . .	119
5.3 RF Component Analysis and Design . . . . .	123
5.3.1 Design Optimization of Microstrip Device . . . . .	124
5.3.2 Design Optimization of Dielectric Resonator Antenna . . . . .	132
5.4 Actuator Analysis and Design . . . . .	149
5.4.1 Design Optimization for Magnetostructural Coupling . . . . .	150
5.4.2 Simultaneous Design Optimization of Permanent Magnet, Coils, and Ferromagnetic Material . . . . .	157
5.5 Electric Motor Analysis and Design . . . . .	168
5.5.1 Design Optimization of Switched Reluctance Motors . . . . .	168
5.5.2 Multiphysics Analysis of Interior Permanent Magnet Motors . . . . .	178
References . . . . .	183
<b>6 Extensions to New Topics . . . . .</b>	<b>189</b>
6.1 Scaling-Up of Systems . . . . .	189
6.2 Treatment of Surfaces and Interfaces . . . . .	191
6.3 Free Versus Constrained Systems-Toward Manufacturability . . . . .	192
References . . . . .	196
<b>7 Appendix: Sample Multiphysics Optimization Code . . . . .</b>	<b>199</b>
7.1 MATLAB <sup>®</sup> Example Program for Multiphysics Topology Optimization of Electrothermal Systems . . . . .	200
References . . . . .	208
<b>Index . . . . .</b>	<b>209</b>

Multiphysics Simulation  
Electromechanical System Applications and  
Optimization

Dede, E.M.; Lee, J.; Nomura, T.

2014, XVIII, 212 p. 144 illus., 80 illus. in color.,

Hardcover

ISBN: 978-1-4471-5639-0
