

Contents

1	The Grand Energy Challenge	1
1.1	Solar Energy	4
1.2	Scope of This Book	6
	References	7
2	Status of Solar Photovoltaics	9
2.1	The Efficiency	9
2.2	The Cost	12
2.3	The Market	17
	References	20
3	Physics of Solar Cells	21
3.1	Classification of Solar Cells	21
3.2	Operation of Solar Cells	24
3.2.1	Light Absorption in Solar Cells	24
3.2.2	Charge Separation in Solar Cells	27
3.3	Loss Mechanisms in Solar Cells	30
3.3.1	Optical Losses	31
3.3.2	Recombination Losses	35
3.3.3	Resistive Losses	39
3.4	Solar Cell Parameters	43
	References	45
4	Manufacturing of Wafer-Si Solar Cells and Modules	47
4.1	Polycrystalline-Si Feedstock	47
4.2	Monocrystalline-Si Wafers	50
4.3	Wafer-Si Cells and Modules	51
4.4	Alternative Processes for Si Wafers	55
4.5	A First Look at Major Issues in Solar Photovoltaics	58
	References	60

5 Roadblocks to Terawatt Solar Photovoltaics	61
5.1 Requirements for Terawatt Solar Photovoltaics	61
5.1.1 Material Requirements	62
5.1.2 Device Requirements	64
5.1.3 Shortcomings of Current Cell Technologies	65
5.2 Availability of Raw Materials	66
5.2.1 CdTe	67
5.2.2 CIGS	67
5.2.3 Wafer Si	68
5.2.4 Thin-Film Si	69
5.2.5 Summary on Material Availability	70
5.3 Annual Production of Raw Materials	71
5.4 Energy Input for Wafer-Si Cells and Modules	72
5.5 Other Roadblocks to Terawatt Solar Photovoltaics	75
5.5.1 Storage of Solar Electricity	75
5.5.2 Recycling of Solar Modules	77
References	78
6 Pathways to Terawatt Solar Photovoltaics	81
6.1 Terawatt Wafer-Si Solar Photovoltaics	81
6.1.1 Substitution for Front Ag Electrode	82
6.1.2 Energy-Efficient Production of Si Wafers	85
6.1.3 Fast and Kerfless Cutting of Si Ingots	89
6.2 Terawatt Thin-Film Solar Photovoltaics	91
6.2.1 Thin-Film Si Solar Photovoltaics	91
6.2.2 Thin-Film Post-Si Solar Photovoltaics	93
6.3 Terawatt-Scale Storage of Solar Electricity	98
References	102
7 Final Remarks	105
Reference	107
Index	109

Terawatt Solar Photovoltaics
Roadblocks and Opportunities

Tao, M.

2014, XII, 112 p. 42 illus., Softcover

ISBN: 978-1-4471-5642-0
