

Contents

1	Mathematical Descriptions and Models	1
1.1	Introduction	1
1.2	Input–Output Representation	1
1.2.1	The System	1
1.2.2	Linear and Nonlinear	2
1.2.3	Static and Dynamic Systems, Causality	2
1.2.4	Time Invariance	2
1.2.5	Discrete and Continuous Time	3
1.2.6	Discrete and Continuous Values	3
1.2.7	Concept of the State	3
1.3	Linear Discrete Equations	4
1.3.1	Forward Discrete-Time Equation	4
1.3.2	Backward Discrete-Time Equation	7
1.3.3	Difference Equation	7
1.3.4	Solution of Discrete and Difference Equations	9
1.4	The z -Transform and Transfer Characteristics	11
1.4.1	Definition of the z -Transform	11
1.4.2	Properties of the z -Transform	12
1.4.3	Solving Discrete-Time Equations	13
1.4.4	Transfer Function of Connected Systems	15
1.4.5	The Inverse Transformation	16
1.5	Sampling/Holding and Discrete-Time Signals	19
1.5.1	The Sampling and Holding Process	20
1.5.2	Transfer Function of Sampling/Holding Process	21
1.5.3	Discretization for State-Space Representation	25
1.6	Space Discretization of Continuous Signals	26
1.6.1	Sampling/Holding and Discretization Process	26
1.6.2	Discrete-Value Signals	27
1.6.3	Connection of Sampling/Holding Process	27
1.6.4	Space Discretizing Process	28

1.6.5	Binary Arithmetic with a Finite Word Length	31
1.6.6	Truncation and Rounding of Binary Numbers	32
1.7	Exercises	34
Appendix A	Simultaneous Linear Equations and Matrix Expressions	35
Appendix B	Function Space, H_p , L_p , and ℓ_p Spaces	38
Appendix C	Inverse z -Transform	40
Appendix D	Sampling Theorem	42
References	44
2	Discretized Feedback Systems	45
2.1	Introduction	45
2.2	Discretized Control Systems	45
2.3	Discretization and Nonlinear Sector	48
2.3.1	Three Types of Discretization	48
2.3.2	Nominal Gains and Sector Parameters	49
2.4	Equivalent Transformation	53
2.5	Norm Inequalities	57
2.6	Sum of Trapezoidal Areas	59
2.7	Exercises	66
Appendix A	Norms and Inner Products of L_p and ℓ_p Spaces	68
Appendix B	Hölder and Schwarz Inequalities	69
Appendix C	Minkowski Inequalities	70
References	71
3	Robust Stability Analysis	73
3.1	Introduction	73
3.2	Input-Output Stability	73
3.3	Small Gain Theorem and Circle Criterion	74
3.4	Discretized Nonlinear Control Systems	79
3.5	Robust Stability for Discretized Systems	81
3.6	Some Relations to Traditional Theory	85
3.7	Modified Hall Diagram (Off-Axis M-Circles)	92
3.8	Modified Nichols Diagram	96
3.9	Exercises	99
Appendix A	Fourier-Plancherel Transform	99
Appendix B	Parseval Identity	101
Appendix C	Bilinear Transformation and Mapping	104
Appendix D	The Hall Diagram	104
Appendix E	The Nichols Diagram	106
References	107
4	Model Reference Feedback and PID Control	109
4.1	Introduction	109
4.2	Discretized PID Control	109
4.2.1	PID Control Scheme	109
4.2.2	Controller Algorithm	112

4.2.3	Controlled Systems with Time Delay	118
4.3	Model Reference Feedback Control	119
4.3.1	Discrete Model Reference and Observer	119
4.3.2	Bilinear Transformation and Discrete Model	121
4.4	Discretized Nonlinear Characteristics and Inequality Conditions	124
4.4.1	Partition of Nonlinear Characteristics	124
4.4.2	Sum of Trapezoidal Areas	127
4.5	Vector-Matrix Expression for Model Reference Control	129
4.6	Robust Stability Condition for Multi-Nonlinearity Systems	131
4.7	Model Reference Control with Transmission Delay	136
4.8	Exercises	139
	Appendix	140
A.1	Polynomial Operations	140
A.2	Complex Variable Functions	142
A.3	Partial Fraction Expansions	143
	References	145
5	Multi-Loop Feedback Systems	147
5.1	Introduction	147
5.2	Input-Output Stability for Multi-Loop Systems	147
5.3	Stability Condition for Multi-Loop Systems	149
5.4	Input-Output Stability for Two-Control-Input Systems	154
5.5	Multi-Loop Discretized PID Control Systems	156
5.6	Model Reference Multi-Loop Control Systems	172
5.7	Exercises	177
	Appendix A Definition of Ostrowski's M-Matrix	178
	Appendix B Graphical Interpretation of M-Matrices	178
	References	181
6	Interval Polynomials and Robust Performance	183
6.1	Introduction	183
6.2	Sector Nonlinearities and Interval Systems	183
6.3	Characteristic Polynomials with Interval Parameters	188
6.4	Sectorial \mathcal{D} -Stability	190
6.5	Four Corner Polynomials	193
6.6	Division Algorithm	195
6.7	Multiple Edges and Rectangles	197
6.8	Robust Control System Design	202
6.9	Exercises	203
	Appendix A Kharitonov Rectangles	204
	Appendix B Roots of Polynomials and Sturm's Theorem	206
	References	219
7	Relation to Discrete Event Systems	221
7.1	Introduction	221
7.2	Finite State and Event-Driven Systems	221

7.3	State and Event Trajectories	222
7.3.1	Vending Machine	224
7.3.2	Buffer Machine	225
7.3.3	Load Balancing System	226
7.4	Petri Nets	227
7.4.1	Simple Petri Net and Graph	228
7.4.2	Production Network	229
7.4.3	Network Computers	230
7.5	Feedback/Supervisory Control and Stability Concepts	230
7.6	Multiple Metrics and Stability	233
7.7	Exercises	237
Appendix A	Metric Space and Invariant Set	237
Appendix B	Absolute Value of Each Element of Vector-Matrix	238
References	239
Index	241
