1	Introduction	1
1.1	Manufacturing Automation	1
1.2	Process Control in Manufacturing	2
1.3	Stamping Process	4
1.4	Stamping Process Control	6
1.5	Purpose and Scope	8
	References	9
2	Equipment and Material Flow Control	11
2.1	Types of Stamping Presses	11
2.2	Mechanical Presses	12
2.3	Hydraulic Presses	13
2.4	Variable Binder Force Control	17
2.5	Overview of Machine and Process Control	19
	References	21
3	Recent Advances in Stamping Control	23
3.1	Developments in Stamping Control	23
3.1.1	Die Try-Out	23
3.1.2	Closed-Loop Machine Control	24
3.1.3	In-Process Control	26
3.1.4	Cycle-to-Cycle Control	28
3.2	Active Binder Control Systems	29
3.2.1	Segmented Blank Holder System	30
3.2.2	Pulsating BHF Control System	30
3.2.3	Active Drawbead Control System	31
3.2.4	Reconfigurable Discrete Die	32
3.3	Process Variables and Sensors	34
3.3.1	Punch Force	34
3.3.2	Draw-In	34
3.3.3	Wrinkling	36
3.4	Concluding Remarks	37
	References	37

4	Machine Control	41
4.1	Machine Control Objectives	41
4.2	Design of Variable Binder Force Systems	42
4.3	Controller Design	44
4.4	Controller Implementation	47
4.5	Experimental Results	49
	References	51
5	Laboratory Development of Process Control	53
5.1	Background on Process Control for Stamping	53
5.2	Experimental Facility and Model Development	55
5.3	Establishing the Reference Punch Force	56
5.4	Process Controller Design	56
5.5	Punch Force Reference Trajectory Design	60
5.6	Concluding Remarks	62
	References	63
6	Process Control	65
6.1	Process Modeling and Control	65
6.2	System Identification	67
6.2.1	Experimental System	67
6.2.2	Experimental Data for System Identification	67
6.2.3	Process Model Structure	70
6.2.4	Parameter Estimation for Process Modeling	72
6.3	Process Control Design Based on MIMO Model	76
6.3.1	Design of the PI Process Controller	77
6.3.2	Simulation Results with PI Controller Based on Estimated Model	79
6.3.3	Experimental Results	81
6.4	Concluding Remarks	83
	References	84
7	Auto-Tuning and Adaptive Control	87
7.1	Automatic Tuning and Adaptive Process Control	87
7.2	Stamping Process Model and Estimation	90
7.3	Preliminary Experiment with Process Variables	90
7.4	Auto-Tuning Based on Relay Feedback	91
7.4.1	Structure of the Process Controller	91
7.4.2	The Auto-Tuning Method	92
7.5	Design and Implementation of Direct MRAC	93
7.5.1	Direct MRAC Process Controller Structure	93
7.5.2	Robustness of MRAC to Parameters Variations	98
7.5.3	Parameter-Constrained Estimation	99
7.6	Simulation Results	100

7.7	Experimental Validation	103
7.7.1	Lubrication Change	103
7.7.2	Material Thickness Variation	104
7.8	Concluding Remarks	105
	References	106
8	Direct and Indirect Adaptive Process Control	109
8.1	Adaptive Control Applications	109
8.2	Prior Information for Adaptive Control	112
8.2.1	Perturbation Process Model Structure	113
8.2.2	Process Controller Structure	114
8.3	Direct and Indirect Adaptive Control	114
8.3.1	Direct Model Reference Adaptive Control (MRAC)	114
8.3.2	Indirect Adaptive Control Using Look-Up Table.	115
8.4	Simulation and Experimental Results	122
8.4.1	Simulation Results	122
8.4.2	Experimental Validation	125
8.5	Discussion and Remarks	129
8.6	Summary and Conclusions	130
	References	131
9	Concluding Remarks	133
9.1	Summary	133
9.2	Benefits of Process Control in Stamping	134
9.3	Future Research and Extensions	136
	References	137
	Index	139

Process Control for Sheet-Metal Stamping
Process Modeling, Controller Design and Shop-Floor
Implementation

Lim, Y.; Venugopal, R.; Ulsoy, A.G.

2014, XI, 140 p. 79 illus., 67 illus. in color., Hardcover

ISBN: 978-1-4471-6283-4
