

Contents

- 1 Introduction to Smart Grids 1**
 - 1.1 What Is a Smart Grid 4
 - 1.1.1 Clean Energy 4
 - 1.1.2 Energy Management 8
 - 1.1.3 Consumer Participation in Energy Management 11
 - 1.1.4 Grid Modernization 11
 - 1.2 Smart Grid Domains and Their Interconnections 13
 - 1.3 Objectives of the Smart Grid Communication Network 14
 - 1.4 Overview of the Book 18
 - References 21

- 2 Elements of Power Systems for Networking Practitioners 23**
 - 2.1 Voltage, Current, Power, and Energy 23
 - 2.1.1 Direct Current (DC) System 23
 - 2.1.2 Alternating Current (AC) System 25
 - 2.1.3 Phasors 31
 - 2.2 Power Generation 34
 - 2.3 Transmission Systems 36
 - 2.4 Distribution Systems 41
 - 2.5 Faults, Circuit Breakers, Switches, and Reclosers 42
 - References 45

- 3 Elements of Communication Networking for Power System Practitioners 47**
 - 3.1 Elements of Data Communication Networks 48
 - 3.1.1 Links and Nodes 49
 - 3.1.2 Connection-Oriented and Connectionless Services 50
 - 3.1.3 Elements of Packet Communication 51
 - 3.1.4 Classification of Networks 54

3.2	Protocols and Protocol Layers	54
3.2.1	OSI Reference Model	55
3.2.2	Practical Protocol Layering in Network Standards and Products	58
3.3	Data Networking Technologies	62
3.3.1	Physical Layer (PHY)	62
3.3.2	Link Layer	67
3.3.3	MPLS	74
3.3.4	Network Layer: IP	77
3.3.5	TCP and UDP	81
3.4	Protocol Emulation, Tunneling, Encapsulation, and Gateways	82
3.5	MPLS Services and Protocol Emulation	84
3.6	Networking Standards.....	87
	References	88
4	Conventional Applications in Utility Operations.....	91
4.1	Distribution Management and Transmission Management.....	92
4.2	SCADA	93
4.2.1	Traditional SCADA	93
4.2.2	Substation Automation	95
4.2.3	SCADA Evolution with IEC 61850 Set of Standards.....	96
4.2.4	Networking for SCADA.....	98
4.3	Teleprotection	100
4.3.1	What Is Teleprotection	100
4.3.2	Teleprotection Requirements.....	101
4.3.3	Networking for Teleprotection	102
4.4	CCTV	104
4.4.1	Video Surveillance at Substations	104
4.4.2	Networking for CCTV	105
4.5	Mobile Workforce Communication	106
4.6	Business Voice and Data	108
	References	108
5	Smart Grid Applications.....	111
5.1	Advanced Metering Infrastructure (AMI).....	111
5.1.1	Smart Meter Measurements	112
5.1.2	Networking for AMI	113
5.1.3	Smart Meter Standards	115
5.2	Distribution Automation (DA).....	117
5.2.1	Networking for DA	118
5.3	Distributed Generation (DG)	120
5.3.1	DG at Consumption Locations Versus Stand-Alone DG	120
5.3.2	AC Versus DC	121
5.3.3	Managing DG Connections to the Grid.....	121

5.4	Distributed Storage	122
5.5	Electric Vehicles (EVs)	125
5.6	Home Area Networks (HANs)	126
5.7	Microgrids	128
5.8	Retail Energy Markets	130
5.9	Demand Response	131
5.9.1	Demand Response Methods	133
5.10	Wide Area Situational Awareness and Synchrophasors	137
5.10.1	Synchrophasors	138
5.10.2	NASPINet	139
5.10.3	PMUs in Distribution Systems	141
5.11	Flexible AC Transmission System (FACTS)	141
5.12	Dynamic Line Rating (DLR)	142
5.13	Summary of Applications	143
	References	145
6	A Communication Network Architecture for the Smart Grid	149
6.1	Architecture Framework	150
6.1.1	Core-Edge Architecture	150
6.1.2	Smart Grid Network Protocols	151
6.1.3	Smart Grid Domains and Smart Grid Communication Network	152
6.2	Wide Area Network	153
6.2.1	WAN Architecture	153
6.2.2	WAN over Network Service Provider Networking Service	155
6.3	Local Traffic Aggregation	157
6.4	Putting It All Together	160
6.5	Field Area Networks	161
6.5.1	FAN Protocol Options	161
6.5.2	Summary of FAN Networking Technologies	162
6.6	Logical End-to-End Connectivity (A Few Examples)	162
6.6.1	Automated Demand Response	162
6.6.2	Volt, VAR, Watt Control in Distribution System	164
6.6.3	Wide Area Situational Awareness and Control	166
	References	167
7	An Overview of Smart Grid Network Design Process	169
7.1	An Overview of the Network Design Process	170
7.2	Network Traffic	172
7.2.1	Smart Grid Traffic Characterization	173
7.2.2	A Case Study: Smart Grid Bandwidth Requirement in an LTE Macrocell	179
7.3	Traffic Aggregation and Routing Architecture	182
7.3.1	Routing Protocols	184
7.3.2	Label-Switched Paths	185

7.4	Network Performance	186
7.4.1	Delays and Priorities	186
7.4.2	QoS Considerations in Smart Grid Network	189
7.4.3	Per-Hop Behavior.....	190
7.4.4	QoS Implementation Practices in Current Data Networks	191
7.4.5	Differentiated Services for Smart Grid Application Functions	194
7.4.6	QoS with MPLS	198
7.5	Network Reliability	199
7.6	Network Security Elements	203
7.7	Network Scalability	205
	References.....	205
8	Network Security	209
8.1	Importance of Smart Grid Security.....	210
8.2	Regulations, Standards, and Best Practices	211
8.3	Smart Grid Security Architecture.....	212
8.4	Security Zones.....	216
8.4.1	Transmission Zone	216
8.4.2	Distribution SCADA Zone	218
8.4.3	Distribution Non-SCADA Zone	220
8.4.4	Interconnect Zone	223
8.5	Additional Security-Related Operations	223
	References.....	224
9	WAN and FAN Technologies for the Smart Grid	227
9.1	Wide Area Network	229
9.1.1	Fiber Infrastructure	229
9.1.2	SONET/SDH	231
9.1.3	Ethernet	234
9.1.4	Optical Transport Network.....	237
9.1.5	WAN Extension with Microwave Infrastructure	238
9.1.6	WAN over Network Service Provider Networks	239
9.2	Wireline Technologies for Field Area Networks.....	239
9.2.1	Point-to-Point TDM Connections.....	239
9.2.2	Frame Relay Service	240
9.2.3	Metro Ethernet Service	241
9.2.4	MPLS Services	241
9.2.5	(Wireline) Broadband Services	242
9.2.6	Evolution of Power Line Communication for FANs	244
9.3	Wireless Technologies for Field Area Networks.....	249
9.3.1	Wireless Broadband Access Services.....	249
9.3.2	Private Wireless Networks	252
9.3.3	LTE for FANs	256

9.4	Network Ownership	260
9.4.1	Benefits of Private (Utility-Owned) Networks	260
9.4.2	Benefits of NSP Networks	261
9.4.3	Utility Options	262
	References	262
10	Smart Grid Data Management.....	265
10.1	Characterization of Smart Grid Data	267
10.1.1	Technology Challenges	267
10.2	Secure Information and Data Management Architecture.....	268
10.2.1	Design Requirements	270
10.3	Secure Data Management.....	271
10.3.1	Secure End-to-End Protocols	272
10.3.2	Data Management Platform	275
10.4	Applications of Smart Grid Data	277
10.4.1	Utility-Centric Applications	279
10.4.2	Consumer-Centric Analytics	280
10.4.3	Market-Centric Analytics	281
	References	282
11	Communication Network Transformation.....	285
11.1	Assessment of Present Mode of Operation and Gap Analysis	287
11.1.1	Applications.....	287
11.1.2	Utility-Owned Networking Assets and Networks.....	292
11.1.3	NSP Network Services	294
11.1.4	Network Elements and Network Configuration	295
11.1.5	Network Requirements	296
11.1.6	Network Operations and Network Management	298
11.2	Target Network Architecture and High-Level Network Design....	298
11.3	WAN Expansion and Modernization	301
11.4	Evolution of FANs	303
11.5	Migration to the Target Network Architecture	308
11.5.1	Two-Phase Migration for Utilities with Significant Fiber Assets.....	309
11.5.2	Migration Phasing Based on Geographical Division	313
11.5.3	Migration Phasing Based on Application	314
11.5.4	Migration Phasing Based on a Greenfield WAN.....	315
11.5.5	Final Phase of Migration to the Target Network Architecture	315
11.6	Evolution of Operations Support Systems and Network Operations	321
11.6.1	Evolution of Operations Support Systems.....	321
11.6.2	Evolution of Network Operations and Network Management	323

Communication Networks for Smart Grids

Making Smart Grid Real

Budka, K.C.; Deshpande, J.G.; Thottan, M.

2014, XVIII, 369 p. 119 illus., 32 illus. in color.,

Hardcover

ISBN: 978-1-4471-6301-5
