1	Experimental Methods for Investigation of Porous Materials and Powders	1
	Yury Mironovich Volfkovich and Vladimir Sergeevich Bagotsky	
1.1	Classical Methods	1
1.1.1	Methods for Investigation of Structural Properties	1
1.1.2	Methods for Investigation of Wetting Properties	2
1.2	The Method of Standard Contact Porosimetry	3
1.2.1	Principles of the Method	3
1.2.2	Possibilities of MSCP for the Investigation of Porous Structure	4
1.2.3	Investigation of Wetting and Sorption Properties of Porous Materials	5
	References	6
 Part I Technical Materials		
2	Paper	9
	Yury Mironovich Volfkovich	
2.1	History	9
2.2	Production	11
2.3	The Structure, Properties, and Applications	12
2.4	Porosity	13
2.5	Sorption Properties of the Paper	13
2.6	Banknote Paper	14
2.7	Carbon Paper of Fuel Cell	18
2.8	Gas Diffusion Layer	18
	References	18
3	Components of Power Sources/(or of Electrochemical Energetics)	19
	Yury Mironovich Volfkovich and Vladimir Sergeevich Bagotsky	
3.1	Fuel Cells and Their Components	19
3.1.1	The Catalytic Layer	20
3.1.2	Catalysts in Fuel Cells	24

3.1.3	The Gas-Diffusion Layer (GDL)	31
3.1.4	Membranes	33
3.1.5	Membrane-Electrode Assemblies	38
3.1.6	Conclusions	40
3.2	Primary and Secondary Batteries	41
3.2.1	Lead Acid Batteries	42
3.2.2	Silver–Zinc Batteries.	44
3.2.3	Sealed Alkaline and Acid Batteries.	46
3.2.4	Lithium-Ion Batteries	47
3.2.5	Lithium Thionyl Chloride Primary Elements	53
3.2.6	Lithium-Air Batteries	56
3.3	Electrochemical Supercapacitors.	61
3.3.1	Main Properties of Electric Double-Layer Capacitors	61
3.3.2	Nanoporous Carbons Obtained by Different Methods	68
	References	78
4	Powder Metallurgy	83
	Mikhail Mikhailovich Serov	
4.1	Comparative Analysis of the Properties of the Porous Body.	83
4.2	Processes of Powder Metallurgy for Porous Materials.	89
4.2.1	Methods for Forming Porous Materials	90
4.3	Sintering of Porous Materials.	96
4.4	Application of Porous Materials	100
	References	101
5	Thermal Insulating Materials	103
	Yuliya Sergeevna Dzyazko and Boris Yakovlevich Konstantinovsky	
5.1	Functions and Types of Thermal Insulation	103
5.2	Porosity and Its Measurements.	105
5.3	Functional Properties Affected by Porosity: Measurements of Thermal Conductivity	111
5.4	Heat Transfer.	113
5.5	Compressive Strength	119
5.6	Controlled Pore Formation in Thermal Insulating Materials. . .	122
5.7	Conclusions	126
	References	127

6	Characteristics and Structure of Powdered Medical Substances Used in the Pharmaceutical Industry	129
	Mikhail L'vovich Ezerskiy and Vladimir Sergeevich Bagotsky	
6.1	Structural Parameters of Medical and Auxiliary Substances and Methods for Their Measurements.	129
6.1.1	Particle Size (Degree of Dispersion)	130
6.1.2	Adsorption and Wetting Properties	131
6.1.3	Technological (Rheological and Packing) Properties	131
6.2	Biopharmaceutical Properties of Some Sulfanilamide Powders, Suspensions, and Tablets	132
