## Preface

Every book has someone who keeps the editors/authors on track, picks up loose ends, proofs, edits, and helps it become a reality. For this book, it was Andi Clifford. Thank you.

Many of our techniques were developed over time through patient outcomes: many published and more unpublished. For the tireless monitoring of our research efforts, we salute and thank research coordinator Vicki Snodgrass Miller at OrthoIndy Cartilage Restoration Center and Tim Bryant at the Cartilage Repair Center. The techniques were honed in the OR. At OrthoIndy, I would like to recognize and thank my regular team, Denise, Mary, Chris, and many others who fill in when needed.

We attempted to augment our work with specific chapters written by leaders in the field. We thank Christian Lattermann for his excellent chapters on tibiofemoral patholaxity and meniscal considerations. As surgeons, we are at times intimidated by imaging and thus very much appreciate the clarity of the chapter by Nehal Shah and Hiroshi Yoshioka. There are many exciting new techniques not available in the USA, but their knowledge is important as this is a global field. We very much appreciate Vincenzo Condello for his contribution in a chapter on meniscal transplant alternatives and Greg Janes for his chapter on MACI.

The publisher graciously requested that we put this work together and then followed through with guidance and a quality support staff, especially Michael D. Sova who helped guide, develop, and coordinate our ideas. We attempted to update and create original illustrations. We not only appreciate the excellent artistic skills of Wendy Vetter and her staff but also very much appreciate their patience as we modified and re-modified the illustrations.

Cartilage Restoration

Practical Clinical Applications

Farr, J.; Gomoll, A.H. (Eds.)

2014, XIV, 253 p. 347 illus., 298 illus. in color.,
