Part I Theory

1	Mathematical Foundation	3
1.1	Basic Probability	3
1.1.1	Union Bound	3
1.1.2	Independence	4
1.1.3	Pairs of Random Variables	4
1.1.4	The Markov and Chebyshev Inequalities and Chernoff Bound	5
1.1.5	Characteristic Function and Fourier Transform	6
1.1.6	Laplace Transform of the pdf	8
1.1.7	Probability Generating Function	8
1.2	Sums of Independent (Scalar-Valued) Random Variables and Central Limit Theorem	9
1.3	Sums of Independent (Scalar-Valued) Random Variables and Classical Deviation Inequalities: Hoeffding, Bernstein, and Efron-Stein	11
1.3.1	Transform of Probability Bounds to Expectation Bounds	12
1.3.2	Hoeffding’s Inequality	12
1.3.3	Bernstein’s Inequality	14
1.3.4	Efron-Stein Inequality	17
1.4	Probability and Matrix Analysis	17
1.4.1	Eigenvalues, Trace and Sums of Hermitian Matrices	17
1.4.2	Positive Semidefinite Matrices	18
1.4.3	Partial Ordering of Positive Semidefinite Matrices	19
1.4.4	Definitions of $f(\mathbf{A})$ for Arbitrary f	20
1.4.5	Norms of Matrices and Vectors	21
1.4.6	Expectation	23
1.4.7	Moments and Tails	26

1.4.8	Random Vector and Jensen's Inequality	29
1.4.9	Convergence	30
1.4.10	Sums of Independent Scalar-Valued Random Variables: Chernoff's Inequality	30
1.4.11	Extensions of Expectation to Matrix-Valued Random Variables.....	32
1.4.12	Eigenvalues and Spectral Norm	32
1.4.13	Spectral Mapping	33
1.4.14	Operator Convexity and Monotonicity.....	35
1.4.15	Convexity and Monotonicity for Trace Functions.....	36
1.4.16	The Matrix Exponential	38
1.4.17	Golden-Thompson Inequality	38
1.4.18	The Matrix Logarithm	39
1.4.19	Quantum Relative Entropy and Bregman Divergence	40
1.4.20	Lieb's Theorem	42
1.4.21	Dilations	43
1.4.22	The Positive Semi-definite Matrices and Partial Order	44
1.4.23	Expectation and the Semidefinite Order	45
1.4.24	Probability with Matrices.....	45
1.4.25	Isometries	46
1.4.26	Courant-Fischer Characterization of Eigenvalues	46
1.5	Decoupling from Dependence to Independence.....	47
1.6	Fundamentals of Random Matrices	54
1.6.1	Fourier Method	54
1.6.2	The Moment Method	54
1.6.3	Expected Moments of Random Matrices with Complex Gaussian Entries.....	55
1.6.4	Hermitian Gaussian Random Matrices $\text{HGRM}(n, \sigma^2)$	57
1.6.5	Hermitian Gaussian Random Matrices $\text{GRM}(m, n, \sigma^2)$	59
1.7	Sub-Gaussian Random Variables.....	60
1.8	Sub-Gaussian Random Vectors.....	65
1.9	Sub-exponential Random Variables	66
1.10	ε -Nets Arguments.....	67
1.11	Rademacher Averages and Symmetrization	69
1.12	Operators Acting on Sub-Gaussian Random Vectors	72
1.13	Supremum of Stochastic Processes	75
1.14	Bernoulli Sequence	76
1.15	Converting Sums of Random Matrices into Sums of Random Vectors.....	76
1.16	Linear Bounded and Compact Operators	79
1.17	Spectrum for Compact Self-Adjoint Operators.....	80

2	Sums of Matrix-Valued Random Variables	85
2.1	Methodology for Sums of Random Matrices	85
2.2	Matrix Laplace Transform Method	87
2.2.1	Method 1—Harvey’s Derivation	87
2.2.2	Method 2—Vershynin’s Derivation	91
2.2.3	Method 3—Oliveria’s Derivation	94
2.2.4	Method 4—Ahlsvede-Winter’s Derivation	95
2.2.5	Derivation Method 5—Gross, Liu, Flammia, Becker, and Eisert	106
2.2.6	Method 6—Recht’s Derivation	106
2.2.7	Method 7—Derivation by Wigderson and Xiao	107
2.2.8	Method 8—Tropp’s Derivation	107
2.3	Cumulate-Based Matrix-Valued Laplace Transform Method	108
2.4	The Failure of the Matrix Generating Function	109
2.5	Subadditivity of the Matrix Cumulant Generating Function	110
2.6	Tail Bounds for Independent Sums	111
2.6.1	Comparison Between Tropp’s Method and Ahlsvede–Winter Method	114
2.7	Matrix Gaussian Series—Case Study	115
2.8	Application: A Gaussian Matrix with Nonuniform Variances	118
2.9	Controlling the Expectation	119
2.10	Sums of Random Positive Semidefinite Matrices	121
2.11	Matrix Bennett and Bernstein Inequalities	125
2.12	Minimax Matrix Laplace Method	128
2.13	Tail Bounds for All Eigenvalues of a Sum of Random Matrices	128
2.14	Chernoff Bounds for Interior Eigenvalues	131
2.15	Linear Filtering Through Sums of Random Matrices	134
2.16	Dimension-Free Inequalities for Sums of Random Matrices	137
2.17	Some Khintchine-Type Inequalities	140
2.18	Sparse Sums of Positive Semi-definite Matrices	144
2.19	Further Comments	144
3	Concentration of Measure	145
3.1	Concentration of Measure Phenomenon	145
3.2	Chi-Square Distributions	146
3.3	Concentration of Random Vectors	148
3.4	Slepian-Fernique Lemma and Concentration of Gaussian Random Matrices	159
3.5	Dudley’s Inequality	162
3.6	Concentration of Induced Operator Norms	165
3.7	Concentration of Gaussian and Wishart Random Matrices	173
3.8	Concentration of Operator Norms	180
3.9	Concentration of Sub-Gaussian Random Matrices	185

3.10	Concentration for Largest Eigenvalues	190
3.10.1	Talagrand's Inequality Approach	191
3.10.2	Chaining Approach	192
3.10.3	General Random Matrices	193
3.11	Concentration for Projection of Random Vectors	194
3.12	Further Comments	198
4	Concentration of Eigenvalues and Their Functionals	199
4.1	Supremum Representation of Eigenvalues and Norms	199
4.2	Lipschitz Mapping of Eigenvalues	202
4.3	Smoothness and Convexity of the Eigenvalues of a Matrix and Traces of Matrices	203
4.4	Approximation of Matrix Functions Using Matrix Taylor Series	211
4.5	Talagrand Concentration Inequality	216
4.6	Concentration of the Spectral Measure for Wigner Random Matrices	218
4.7	Concentration of Noncommutative Polynomials in Random Matrices	222
4.8	Concentration of the Spectral Measure for Wishart Random Matrices	223
4.9	Concentration for Sums of Two Random Matrices	235
4.10	Concentration for Submatrices	237
4.11	The Moment Method	238
4.12	Concentration of Trace Functionals	243
4.13	Concentration of the Eigenvalues	244
4.14	Concentration for Functions of Large Random Matrices: Linear Spectral Statistics	246
4.15	Concentration of Quadratic Forms	249
4.16	Distance Between a Random Vector and a Subspace	257
4.17	Concentration of Random Matrices in the Stieltjes Transform Domain	261
4.18	Concentration of von Neumann Entropy Functions	264
4.19	Supremum of a Random Process	267
4.20	Further Comments	268
5	Non-asymptotic, Local Theory of Random Matrices	271
5.1	Notation and Basics	272
5.2	Isotropic Convex Bodies	273
5.3	Log-Concave Random Vectors	275
5.4	Rudelson's Theorem	277
5.5	Sample Covariance Matrices with Independent Rows	281

5.6	Concentration for Isotropic, Log-Concave Random Vectors	290
5.6.1	Paouris' Concentration Inequality	290
5.6.2	Non-increasing Rearrangement and Order Statistics	292
5.6.3	Sample Covariance Matrix	293
5.7	Concentration Inequality for Small Ball Probability	295
5.8	Moment Estimates	299
5.8.1	Moments for Isotropic Log-Concave Random Vectors.....	299
5.8.2	Moments for Convex Measures	303
5.9	Law of Large Numbers for Matrix-Valued Random Variables ...	305
5.10	Low Rank Approximation	309
5.11	Random Matrices with Independent Entries.....	313
5.12	Random Matrices with Independent Rows	314
5.12.1	Independent Rows	314
5.12.2	Heavy-Tailed Rows	316
5.13	Covariance Matrix Estimation.....	320
5.13.1	Estimating the Covariance of Random Matrices	322
5.14	Concentration of Singular Values	324
5.14.1	Sharp Small Deviation	325
5.14.2	Sample Covariance Matrices	325
5.14.3	Tall Matrices	326
5.14.4	Almost Square Matrices	326
5.14.5	Square Matrices	327
5.14.6	Rectangular Matrices	327
5.14.7	Products of Random and Deterministic Matrices	329
5.14.8	Random Determinant	331
5.15	Invertibility of Random Matrix.....	334
5.16	Universality of Singular Values	337
5.16.1	Random Matrix Plus Deterministic Matrix	341
5.16.2	Universality for Covariance and Correlation Matrices	345
5.17	Further Comments	349
6	Asymptotic, Global Theory of Random Matrices.....	351
6.1	Large Random Matrices	351
6.2	The Limit Distribution Laws	352
6.3	The Moment Method	353
6.4	Stieltjes Transform	354
6.5	Free Probability	358
6.5.1	Concept.....	358
6.5.2	Practical Significance	359
6.5.3	Definitions and Basic Properties	360

6.5.4	Free Independence	362
6.5.5	Free Convolution.....	364
6.6	Tables for Stieltjes, R- and S-Transforms.....	365

Part II Applications

7	Compressed Sensing and Sparse Recovery	371
7.1	Compressed Sensing	371
7.2	Johnson–Lindenstrauss Lemma and Restricted Isometry Property	374
7.3	Structured Random Matrices	383
7.3.1	Partial Random Fourier Matrices	384
7.4	Johnson–Lindenstrauss Lemma for Circulant Matrices.....	384
7.5	Composition of a Random Matrix and a Deterministic Dictionary	384
7.6	Restricted Isometry Property for Partial Random Circulant Matrices	392
7.7	Restricted Isometry Property for Time-Frequency Structured Random Matrices	400
7.8	Suprema of Chaos Processes	405
7.9	Concentration for Random Toeplitz Matrix	408
7.10	Deterministic Sensing Matrices	410
8	Matrix Completion and Low-Rank Matrix Recovery	411
8.1	Low Rank Matrix Recovery	411
8.2	Matrix Restricted Isometry Property	413
8.3	Recovery Error Bounds	414
8.4	Low Rank Matrix Recovery for Hypothesis Detection	415
8.5	High-Dimensional Statistics.....	416
8.6	Matrix Compressed Sensing.....	417
8.6.1	Observation Model	417
8.6.2	Nuclear Norm Regularization	418
8.6.3	Restricted Strong Convexity.....	418
8.6.4	Error Bounds for Low-Rank Matrix Recovery	419
8.7	Linear Regression	423
8.8	Multi-task Matrix Regression	427
8.9	Matrix Completion.....	429
8.9.1	Orthogonal Decomposition and Orthogonal Projection.....	430
8.9.2	Matrix Completion.....	432
8.10	Von Neumann Entropy Penalization and Low-Rank Matrix Estimation	434
8.10.1	System Model and Formalism	435
8.10.2	Sampling from an Orthogonal Basis	436

8.10.3	Low-Rank Matrix Estimation	437
8.10.4	Tools for Low-Rank Matrix Estimation	439
8.11	Sum of a Large Number of Convex Component Functions	440
8.12	Phase Retrieval via Matrix Completion	443
8.12.1	Methodology	444
8.12.2	Matrix Recovery via Convex Programming	446
8.12.3	Phase Space Tomography	447
8.12.4	Self-Coherent RF Tomography	449
8.13	Further Comments	456
9	Covariance Matrix Estimation in High Dimensions	457
9.1	Big Picture: Sense, Communicate, Compute, and Control	457
9.1.1	Received Signal Strength (RSS) and Applications to Anomaly Detection	460
9.1.2	NC-OFDM Waveforms and Applications to Anomaly Detection	460
9.2	Covariance Matrix Estimation	461
9.2.1	Classical Covariance Estimation	461
9.2.2	Masked Sample Covariance Matrix	463
9.2.3	Covariance Matrix Estimation for Stationary Time Series	474
9.3	Covariance Matrix Estimation	475
9.4	Partial Estimation of Covariance Matrix	476
9.5	Covariance Matrix Estimation in Infinite-Dimensional Data	478
9.6	Matrix Model of Signal Plus Noise $\mathbf{Y} = \mathbf{S} + \mathbf{X}$	479
9.7	Robust Covariance Estimation	485
10	Detection in High Dimensions	487
10.1	OFDM Radar	487
10.2	Principal Component Analysis	488
10.2.1	PCA Inconsistency in High-Dimensional Setting	490
10.3	Space-Time Coding Combined with CS	490
10.4	Sparse Principal Components	490
10.5	Information Plus Noise Model Using Sums of Random Vectors	491
10.6	Information Plus Noise Model Using Sums of Random Matrices	492
10.7	Matrix Hypothesis Testing	494
10.8	Random Matrix Detection	495
10.9	Sphericity Test with Sparse Alternative	501
10.10	Connection with Random Matrix Theory	502
10.10.1	Spectral Methods	502
10.10.2	Low Rank Perturbation of Wishart Matrices	503
10.10.3	Sparse Eigenvalues	503

10.11	Sparse Principal Component Detection	503
10.11.1	Concentration Inequalities for the k -Sparse Largest Eigenvalue	504
10.11.2	Hypothesis Testing with λ_{\max}^k	505
10.12	Semidefinite Methods for Sparse Principal Component Testing	506
10.12.1	Semidefinite Relaxation for λ_{\max}^k	506
10.12.2	High Probability Bounds for Convex Relaxation	508
10.12.3	Hypothesis Testing with Convex Methods	508
10.13	Sparse Vector Estimation	509
10.14	Detection of High-Dimensional Vectors	511
10.15	High-Dimensional Matched Subspace Detection	514
10.16	Subspace Detection of High-Dimensional Vectors Using Compressive Sensing	516
10.17	Detection for Data Matrices	520
10.18	Two-Sample Test in High Dimensions	520
10.19	Connection with Hypothesis Detection of Noncommutative Random Matrices	525
10.20	Further Notes	526
11	Probability Constrained Optimization	527
11.1	The Problem	527
11.2	Sums of Random Symmetric Matrices	529
11.3	Applications of Sums of Random Matrices	536
11.4	Chance-Constrained Linear Matrix Inequalities	542
11.5	Probabilistically Constrained Optimization Problem	543
11.6	Probabilistically Secured Joint Amplify-and-Forward Relay by Cooperative Jamming	547
11.6.1	Introduction	547
11.6.2	System Model	548
11.6.3	Proposed Approach	552
11.6.4	Simulation Results	556
11.7	Further Comments	556
12	Database Friendly Data Processing	559
12.1	Low Rank Matrix Approximation	559
12.2	Row Sampling for Matrix Algorithms	560
12.3	Approximate Matrix Multiplication	562
12.4	Matrix and Tensor Sparsification	564
12.5	Further Comments	566
13	From Network to Big Data	567
13.1	Large Random Matrices for Big Data	567
13.2	A Case Study for Hypothesis Detection in High Dimensions	569
13.3	Cognitive Radio Network Testbed	571
13.4	Wireless Distributed Computing	571

13.5	Data Collection.....	572
13.6	Data Storage and Management	572
13.7	Data Mining of Large Data Sets.....	573
13.8	Mobility of Network Enabled by UAVs	573
13.9	Smart Grid.....	574
13.10	From Cognitive Radio Network to Complex Network and to Random Graph	574
13.11	Random Matrix Theory and Concentration of Measure	574
Bibliography		577
Index.....		603
