<b>CHAPTER 1</b>	<b>SOURCE ZONE REMEDIATION: THE STATE OF THE PRACTICE</b>	<b>1</b>
1.1	Introduction	1
1.2	Chlorinated Solvent Source Zones	3
1.2.1	Evolution of Understanding	3
1.2.2	Life Cycle of a Chlorinated Solvent Source Zone	5
1.3	Historical Remediation Trends	11
1.3.1	Source Containment	14
1.4	State of the Practice	14
1.4.1	The Source Zone Remediation Challenge (Chapter 2)	14
1.4.2	DNAPL Source Zone Characterization and Delineation (Chapter 3)	15
1.4.3	Advanced Diagnostic Tools (Chapter 4)	16
1.4.4	Modeling Source Zone Remediation (Chapter 5)	16
1.4.5	Modeling Plume Response to Source Treatment (Chapter 6)	17
1.4.6	Flux-Based Site Assessment and Management (Chapter 7)	17
1.4.7	Hydraulic Displacement of Dense Nonaqueous Phase Liquids (Chapter 8)	18
1.4.8	<i>In Situ</i> Chemical Oxidation (Chapter 9)	18
1.4.9	<i>In Situ</i> Chemical Reduction for Source Remediation (Chapter 10)	19
1.4.10	Surfactant and Cosolvent Flushing (Chapter 11)	19
1.4.11	<i>In Situ</i> Bioremediation of Chlorinated Ethene Source Zones (Chapter 12)	20
1.4.12	Natural Attenuation of Chlorinated Solvent Source Zones (Chapter 13)	21
1.4.13	<i>In Situ</i> Thermal Treatment of Chlorinated Solvent Source Zones (Chapter 14)	21
1.4.14	Combined Remedies (Chapter 15)	22
1.4.15	Cost Analyses for Remedial Options (Chapter 16)	23
1.4.16	Groundwater Remediation, Management, and the Use of Alternative Endpoints at Highly Complex Sites (Chapter 17)	23
1.4.17	Future Directions and Research Needs for Source Zone Remediation (Chapter 18)	23
1.5	Summary	24
	References	25
<b>CHAPTER 2</b>	<b>THE SOURCE ZONE REMEDIATION CHALLENGE</b>	<b>29</b>
2.1	Introduction	29
2.2	Source Management Options	31

2.3	Performance Prediction Limitations .....	34
2.4	Source Characterization and Monitoring .....	35
2.4.1	Overview of a DNAPL Site .....	35
2.4.2	Life Cycle of a DNAPL Site Investigation and Remedy .....	37
2.4.3	Characterization and Monitoring Challenges .....	37
2.4.4	Conventional Methods .....	39
2.4.5	Innovative Methods .....	39
2.5	Remediation Technologies .....	41
2.5.1	Hydraulic Displacement .....	41
2.5.2	<i>In Situ</i> Chemical Oxidation .....	41
2.5.3	<i>In Situ</i> Chemical Reduction .....	41
2.5.4	Surfactant and Cosolvent Flushing .....	42
2.5.5	<i>In Situ</i> Bioremediation .....	42
2.5.6	Natural Attenuation of Sources .....	42
2.5.7	<i>In Situ</i> Thermal Treatment .....	43
2.6	Source Remediation Issues .....	43
2.6.1	DNAPL Remediation Effectiveness .....	43
2.6.2	Technology Applicability .....	45
2.6.3	Contaminant Distribution .....	46
2.7	Benefits of Source Depletion .....	48
2.7.1	Source Depletion and Mass Discharge .....	49
2.7.2	Source Depletion and Plume Behavior .....	52
2.8	Risks of Implementing Source Depletion Technologies .....	53
2.9	Estimating Impacts of Source Depletion on Life Cycle Costs .....	54
2.10	Summary and Future Needs .....	55
	References .....	56

### **CHAPTER 3 DNAPL SOURCE ZONE CHARACTERIZATION AND DELINEATION .....**

		63
3.1	Introduction .....	63
3.2	Assessing DNAPL Presence .....	64
3.2.1	Visual Observation (Line of Evidence A) .....	65
3.2.2	Soil Concentration .....	66
3.2.3	Site Use/Site History (Line of Evidence D) .....	69
3.2.4	Vapor Concentrations (Line of Evidence E) .....	70
3.2.5	Hydrophobic Dye Testing (Line of Evidence F) .....	71
3.2.6	Groundwater Concentrations (Line of Evidence G) .....	71
3.3	Assessing the Presence of Diffused Mass .....	75
3.4	Source Zone Delineation .....	77
3.5	Mass Estimates .....	79
3.5.1	Calculation Procedures for Estimating Mass .....	79

Contents	xxix
3.6 Summary .....	81
References .....	82
<b>CHAPTER 4 ADVANCED DIAGNOSTIC TOOLS</b> .....	83
4.1 Introduction .....	83
4.1.1 What Are Diagnostic Tools? .....	83
4.1.2 Why Are Diagnostic Tools Needed? .....	83
4.1.3 Overview of Tools Discussed in This Chapter .....	84
4.1.4 Utility of Diagnostic Tools for Optimizing Remedial Strategies .....	85
4.2 Value Added Through Application of Diagnostic Tools .....	85
4.2.1 Value of Information Analysis .....	85
4.2.2 Basis for Selection of Diagnostic Tools .....	86
4.3 Depth Discrete Sampling .....	87
4.3.1 Multilevel Monitoring Systems .....	87
4.3.2 Rock Matrix Characterization .....	91
4.4 Mass Flux/Mass Discharge Measurement Tools .....	94
4.4.1 Uses .....	94
4.4.2 Description of Techniques .....	94
4.4.3 Advantages/Disadvantages .....	94
4.4.4 Status and Attributes for Selection .....	95
4.5 Compound-Specific Isotope Analysis .....	97
4.5.1 Description .....	97
4.5.2 Regulatory Acceptance .....	98
4.5.3 Attributes for Selection .....	98
4.6 Molecular Biological Tools .....	100
4.6.1 Overview .....	100
4.6.2 Regulatory Acceptance .....	103
4.6.3 Attributes for Selection .....	103
4.7 Value of Information Analysis Summary .....	105
4.7.1 Summary of Diagnostic Tools .....	105
4.7.2 Summary of Attributes for Selection .....	105
4.7.3 Recommendations for Use .....	107
References .....	108
<b>CHAPTER 5 MODELING SOURCE ZONE REMEDIATION</b> .....	113
5.1 Introduction .....	113
5.2 Analytical Versus Numerical Models .....	115

5.3	The Components of a Remediation Model .....	116
5.4	The Modeling Process .....	123
5.5	Examples .....	127
5.5.1	Numerical Simulation of DNAPL Remediation in Unconsolidated Media Using Chemical Oxidation .....	127
5.5.2	Application of <i>In Situ</i> Chemical Oxidation for DNAPL Remediation in Fractured Rock .....	130
5.5.3	Application of Steam Flushing for DNAPL Remediation .....	136
5.6	Summary .....	140
	References .....	140
<b>CHAPTER 6</b>	<b>MODELING PLUME RESPONSES TO SOURCE TREATMENT .....</b>	<b>145</b>
6.1	Introduction .....	145
6.2	Key Issues to Consider in Modeling Plume Responses .....	146
6.3	Modeling Limitations .....	153
6.4	Available Models .....	154
6.5	REMChlor Description .....	156
6.6	Illustrative Examples of REMChlor Simulations .....	160
6.6.1	Comparing Source and Plume Remediation Effects .....	160
6.6.2	Modeling a Permeable Reactive Barrier .....	164
6.6.3	Modeling Remediation of a High-Strength Persistent Source .....	166
6.6.4	Combining Source and Plume Remediation .....	166
6.7	Modeling Plume Responses at Challenging Sites .....	172
6.7.1	Layered Sand–Clay Sequences .....	172
6.7.2	Fractured Bedrock Sites .....	176
6.8	Conclusions .....	181
	References .....	182
<b>CHAPTER 7</b>	<b>FLUX-BASED SITE ASSESSMENT AND MANAGEMENT .....</b>	<b>187</b>
7.1	Introduction .....	187
7.2	Mass Discharge and Mass Flux as Measures in Site Characterization and Management .....	190
7.2.1	Fundamental Background .....	190
7.2.2	Relationship of Mass Depletion and Mass Discharge and Flux .....	192
7.2.3	Site Mass Balance Considerations .....	193
7.2.4	Mass Discharge and Flux During Plume Evolution .....	195
7.2.5	Estimating Source Strength Functions .....	195
7.2.6	Remedial Considerations .....	197

Contents	xxxi
7.3 Methods for Mass Discharge and Mass Flux Measurement .....	198
7.3.1 Transect Method .....	199
7.3.2 Passive Flux Meters .....	200
7.3.3 Integral Pump Tests .....	201
7.4 Fort Lewis DNAPL Case Study for Mass Flux Evaluation .....	201
7.4.1 Remedial Design Considerations .....	203
7.4.2 Mass Balance Considerations .....	206
7.5 Borden Coal Tar Emplacement Experiment Case Study for Mass Flux Evaluation .....	208
7.5.1 Source Strength Predictions .....	210
7.5.2 Source Mass Estimation .....	212
7.5.3 Borden Coal Tar Plume Behavior .....	213
7.6 Conclusions .....	213
References .....	214
<b>CHAPTER 8 HYDRAULIC DISPLACEMENT OF DENSE NONAQUEOUS PHASE LIQUIDS .....</b>	<b>219</b>
8.1 Introduction .....	219
8.2 Screening Calculations .....	220
8.2.1 Fundamentals of Multiphase Flow .....	220
8.2.2 Height of DNAPL Pools .....	223
8.2.3 Volume of DNAPL in a Pool .....	225
8.2.4 DNAPL Saturation Corresponding to Measured Soil Concentration .....	227
8.2.5 Hydraulic Gradient Required to Mobilize Pooled DNAPL .....	227
8.3 State of the Practice .....	230
8.3.1 Evaluation and Implementation Process .....	230
8.3.2 Three-Dimensional Numerical Modeling of Hydraulic Displacement .....	231
8.4 Case Histories .....	237
8.4.1 Chlorinated Solvent Hydraulic Displacement Remedy Design .....	237
8.4.2 Creosote DNAPL Hydraulic Displacement Performance .....	247
8.5 Summary .....	249
References .....	250
<b>CHAPTER 9 <i>IN SITU</i> CHEMICAL OXIDATION .....</b>	<b>253</b>
9.1 Technology Description .....	253
9.1.1 Overview of ISCO .....	253
9.1.2 Historical Evolution of ISCO .....	254
9.1.3 Retrospective Analysis of ISCO Performance and Costs .....	256
9.1.4 ISCO System Selection, Design, and Implementation .....	257

9.2	Key Concepts of ISCO and DNAPL Source Zones .....	258
9.2.1	Chemically Reactive Zones and Mass Transfer .....	258
9.2.2	Oxidant Properties .....	260
9.2.3	Oxidant Reactions in the Subsurface .....	265
9.3	Current Practices for DNAPL Source Zone Treatment using ISCO .....	267
9.4	Remedial Design Issues and Approaches .....	271
9.4.1	DNAPL Source Zones and Viability of ISCO .....	271
9.4.2	Remedial Design Issues .....	271
9.4.3	Remedial Design and Implementation .....	282
9.5	Project Monitoring and System Optimization .....	286
9.5.1	Program Components and Elements .....	286
9.5.2	Monitoring Phases .....	287
9.6	Status and Areas for Advancements .....	291
9.6.1	Status .....	291
9.6.2	Areas for Advancement .....	292
	References .....	294
<b>CHAPTER 10 <i>IN SITU</i> CHEMICAL REDUCTION FOR SOURCE REMEDIATION .....</b>		<b>307</b>
10.1	Introduction .....	307
10.1.1	Technology Development .....	308
10.1.2	State of the Practice .....	309
10.2	Technical Background .....	312
10.2.1	Chlorinated Solvent Degradation Under Reducing Conditions .....	312
10.2.2	Reductants Contributing to ISCR .....	314
10.2.3	Treatment of Source Zones .....	319
10.2.4	Strategies for Delivery .....	322
10.2.5	Combined Remedies .....	328
10.3	Implementation .....	329
10.3.1	Site Delineation and Characterization .....	329
10.3.2	Technology Assessment and Selection .....	330
10.3.3	Technology Design and Implementation .....	331
10.3.4	Case Studies .....	332
10.4	Synthesis and Recommendations .....	336
10.4.1	Advantages and Limitations: Lessons Learned .....	336
10.5	Future Prospects and Needs .....	337
10.5.1	Near-Term Prospects Without Additional Research .....	337
10.5.2	Longer-Term Research Needs .....	337
	References .....	338

<b>CHAPTER 11</b>	<b>SURFACTANT AND COSOLVENT FLUSHING</b>	353
11.1	Introduction	353
11.1.1	Surfactants	355
11.1.2	Cosolvents	357
11.2	Surfactant and Cosolvent Recovery Mechanisms	358
11.2.1	Enhanced Solubility (Solubilization)	359
11.2.2	NAPL Displacement (“Mobilization”)	364
11.3	Surfactant Flushing Case Studies	370
11.3.1	Hill Air Force Base Operable Unit 2	370
11.3.2	Bachman Road Site, Oscoda, Michigan	374
11.3.3	Surfactant Flushing Potential and Limitations	377
11.4	Cosolvent Flushing Case Studies	378
11.4.1	Sages Dry Cleaner Site	379
11.4.2	Cosolvent Flushing Implementation and Limitations	383
11.5	Combined Remediation Strategies for <i>In Situ</i> Flushing	383
11.6	Summary and Conclusions	385
	References	386
<b>CHAPTER 12</b>	<b><i>IN SITU</i> BIOREMEDIATION OF CHLORINATED ETHENE SOURCE ZONES</b>	395
12.1	Introduction	395
12.2	Technology Description	397
12.2.1	Technical Basis	397
12.2.2	Enhanced Dissolution and Source Removal During ISB	398
12.2.3	Microbiology of Chlorinated Ethene Biodegradation	402
12.2.4	Practical Implications	405
12.3	Technical Challenges	405
12.3.1	Toxicity	405
12.3.2	pH	406
12.3.3	Substrate Delivery to the Contaminant	407
12.4	Advantages and Limitations	407
12.4.1	Advantages	407
12.4.2	Limitations	408
12.5	Implementation Options	409
12.5.1	Primary or Polishing Technology	410
12.5.2	Active or Passive Treatment	411
12.5.3	Mass Removal or Source Containment	411
12.5.4	Biostimulation or Bioaugmentation	412
12.5.5	Combining ISB with Other Technologies	412

12.6	Design Considerations .....	414
12.6.1	Site-Specific Challenges .....	414
12.6.2	Amendment Alternatives .....	416
12.6.3	Electron Donor Requirements .....	418
12.6.4	Injection and Delivery .....	418
12.7	Remedial Objectives .....	419
12.8	Predicting Performance .....	421
12.8.1	Modeling ISB at a Field Scale .....	423
12.9	Operations and Monitoring Issues .....	430
12.9.1	Operating and Optimizing ISB Systems .....	430
12.9.2	Monitoring ISB Systems .....	430
12.10	Case Studies .....	434
12.10.1	Rice University Experimental Controlled Release System: Biostimulation and Bioaugmentation .....	435
12.10.2	Dover AFB: Bioaugmentation and Lactate Recirculation .....	437
12.10.3	Fort Lewis East Gate Disposal Yard: Whey Injections .....	438
12.10.4	Tarheel Army Missile Plant, North Carolina: Edible Oil Injection .....	440
12.11	Lessons Learned .....	441
12.12	Future Developments .....	442
12.12.1	Improved Understanding and Treatment of Low-Permeability Regions .....	442
12.12.2	Improving Delivery to DNAPL Accumulations .....	443
12.12.3	ISB at Fractured Rock Sites .....	443
12.12.4	Long-Term Performance Predictions and Improvements .....	443
	References .....	444
<b>CHAPTER 13 NATURAL ATTENUATION OF CHLORINATED SOLVENT SOURCE ZONES .....</b>		<b>459</b>
13.1	Introduction .....	459
13.1.1	MNA as a Source Zone Remedy .....	460
13.1.2	Factors Affecting Applicability .....	461
13.1.3	Life Cycle of Chlorinated Solvent Sources .....	462
13.2	Key Attenuation Processes .....	467
13.2.1	Vaporization and Volatilization .....	468
13.2.2	DNAPL Dissolution .....	469
13.2.3	Desorption .....	474
13.2.4	Matrix Diffusion .....	474
13.2.5	Abiotic Degradation .....	477
13.2.6	Biotic Degradation .....	477

13.3	Remedial Goals and Metrics for Source Zone MNA .....	478
13.3.1	Reducing Source Zone Concentrations and Mass Discharge .....	478
13.3.2	Effect on Source Longevity .....	480
13.3.3	Potential for Attaining MCLs .....	481
13.3.4	Costs .....	481
13.3.5	Sustainability and Intangible Goals .....	482
13.4	State of the Practice .....	482
13.4.1	Regulatory Practices .....	483
13.4.2	Changing Source Paradigms and Impacts on Management .....	485
13.4.3	Source Zone MNA Evaluation Techniques .....	485
13.4.4	Options for Implementation .....	491
13.5	Modeling Source Zone Monitored Natural Attenuation .....	493
13.5.1	Simple Data Extrapolation Modeling .....	493
13.5.2	Analytical Models .....	495
13.5.3	Numerical Models .....	495
13.6	Operations, Monitoring and Optimization .....	496
13.6.1	Observational Approach and Comparison to Predictions .....	496
13.7	Case Studies .....	497
13.7.1	Survey of Source Zone MNA Applications .....	497
13.7.2	Hypothetical Case Study .....	497
13.7.3	Midwest Manufacturing Facility Case Study .....	499
13.8	Summary .....	501
13.8.1	Processes .....	501
13.8.2	Methods .....	501
13.8.3	Applications .....	502
	References .....	502
<b>CHAPTER 14</b>	<b><i>IN SITU</i> THERMAL TREATMENT OF CHLORINATED SOLVENT SOURCE ZONES .....</b>	<b>509</b>
14.1	Introduction .....	509
14.2	Fundamental Mechanisms .....	510
14.2.1	Vapor Formation .....	510
14.2.2	Partitioning .....	514
14.2.3	Fluid Properties .....	519
14.3	Descriptions of Thermal Technologies .....	522
14.3.1	Steam-Enhanced Extraction .....	523
14.3.2	Thermal Conductive Heating .....	525
14.3.3	Electrical Resistance Heating .....	528
14.3.4	Large-Diameter Auger Mixing with Steam Injection .....	531
14.3.5	Radio Frequency Heating .....	532

14.4	Synthesis of Available Data .....	532
14.4.1	Data Summary .....	532
14.4.2	Lessons Learned .....	538
14.4.3	Recommendations for Technology Selection, Application and Performance Assessment .....	538
14.5	Case Studies .....	541
14.5.1	NAS Alameda Point, California .....	541
14.5.2	Fort Lewis, Washington .....	544
14.5.3	Former Naval Air Warfare Center, Trenton, New Jersey .....	548
14.6	Summary .....	553
	References .....	554
<b>CHAPTER 15</b>	<b>COMBINED REMEDIES .....</b>	<b>559</b>
15.1	Introduction .....	559
15.1.1	Evolution of Combined Remedies .....	559
15.1.2	Reasons to Use Combined Remedies .....	561
15.1.3	Challenges in Combining Technologies .....	561
15.2	General Types of Combined Remedies .....	563
15.3	Strategies for Combining Remedial Technologies .....	564
15.3.1	Sequential Technology Combinations .....	565
15.3.2	Concurrent Technology Combinations .....	576
15.4	Prior Applications of Selected Technology Combinations .....	577
15.4.1	ISCO–ISB Sequential Combination .....	577
15.4.2	Surfactant/Cosolvent–ISCO Combinations .....	581
15.4.3	ISCR–ISB Combinations .....	585
15.4.4	ISCR–ISCO Combinations .....	588
15.4.5	<i>In Situ</i> Thermal Treatment: ISCO/ISCR/ISB Combinations .....	588
15.4.6	Surfactant–ISB Combinations .....	589
15.4.7	Contingent Combined Remedies .....	590
15.5	Summary .....	590
	References .....	592
<b>CHAPTER 16</b>	<b>COST ANALYSES FOR REMEDIAL OPTIONS .....</b>	<b>599</b>
16.1	Introduction .....	599
16.2	Cost Analysis Process .....	600
16.2.1	Template Site Descriptions .....	600
16.2.2	Cost Categories and Components .....	602
16.3	Remediation Options Evaluated .....	604
16.3.1	Case 1: Permeable Source Area .....	604
16.3.2	Case 2: Low Permeability Source Area .....	611

16.4	Cost Analyses .....	615
16.4.1	Case 1: Permeable Source Area .....	615
16.4.2	Case 2: Low Permeability Source Area .....	619
16.5	Summary .....	624
	References .....	625
 <b>CHAPTER 17 GROUNDWATER REMEDIATION AND THE USE OF ALTERNATIVE ENDPOINTS AT HIGHLY COMPLEX SITES .....</b>		 627
17.1	Introduction .....	627
17.2	Overview of Remedial Approaches at Complex Sites .....	630
17.3	Active Groundwater Remediation .....	630
17.3.1	Description .....	630
17.3.2	Case Studies: Active Remediation .....	632
17.4	Passive Groundwater Remediation .....	634
17.4.1	Description .....	634
17.4.2	Case Study: Passive Remediation .....	635
17.5	Long Term Management .....	636
17.5.1	Description .....	636
17.5.2	Case Studies: Long Term Management .....	637
17.5.3	Alternative Endpoints .....	639
17.5.4	Identification of ARARs .....	640
17.5.5	Case Studies: Identification of ARARs .....	640
17.5.6	Description of ARAR Waivers .....	641
17.5.7	Case Studies: ARAR Waivers .....	643
17.5.8	Description of Alternate Concentration Limits .....	646
17.5.9	Case Studies: ACLs .....	647
17.6	Summary and Conclusions .....	648
	References .....	648
 <b>CHAPTER 18 FUTURE DIRECTIONS AND RESEARCH NEEDS FOR SOURCE ZONE REMEDIATION .....</b>		 653
18.1	Introduction .....	653
18.2	Remediation Research in Context .....	655
18.3	Research Needs for Site Characterization .....	656
18.3.1	Source Zone Delineation and Mass Estimation .....	656
18.3.2	Source Zone Architecture and Depletion .....	657
18.3.3	Increased Resolution and Fine-Scale Mapping .....	658

18.4	Research Needs for Remediation .....	658
18.4.1	Long-Term Impacts of Source Zone Remediation .....	659
18.4.2	Remedial Fluid Delivery .....	660
18.4.3	Combined Remedies .....	660
18.4.4	Diagnostic and Performance Assessment Tools .....	660
18.4.5	Improved Containment and <i>Ex Situ</i> Treatment .....	661
18.4.6	Economic Analyses .....	661
18.4.7	Technology Performance Models .....	662
18.4.8	Impacts of Management Strategies .....	662
18.4.9	Challenging Site Conditions .....	662
18.5	Technology Transfer Needs .....	663
