

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Classical Local Theory	1
1.1.1	Shortcomings in Failure Prediction	2
1.1.2	Remedies	3
1.2	Nonlocal Theories	5
1.2.1	Basics of Peridynamic Theory	7
1.2.2	Attributes and Its Present State	8
	References	14
<b>2</b>	<b>Peridynamic Theory</b>	<b>19</b>
2.1	Basics	19
2.2	Deformation	20
2.3	Force Density	21
2.4	Peridynamic States	23
2.5	Strain Energy Density	23
2.6	Equations of Motion	24
2.7	Initial and Constraint Conditions	28
2.7.1	Initial Conditions	28
2.7.2	Constraint Conditions	29
2.7.3	External Loads	30
2.8	Balance Laws	32
2.9	Bond-Based Peridynamics	36
2.10	Ordinary State-Based Peridynamics	38
2.11	Nonordinary State-Based Peridynamics	39
	References	43
<b>3</b>	<b>Peridynamics for Local Interactions</b>	<b>45</b>
3.1	Equations of Motion	45
3.2	Relationship Between Cauchy Stresses and Peridynamic Forces	47
3.3	Strain Energy Density	48

<b>4</b>	<b>Peridynamics for Isotropic Materials . . . . .</b>	<b>53</b>
4.1	Material Parameters . . . . .	53
4.1.1	Three-Dimensional Structures . . . . .	57
4.1.2	Two-Dimensional Structures . . . . .	61
4.1.3	One-Dimensional Structures . . . . .	66
4.2	Surface Effects . . . . .	68
	Reference . . . . .	74
<b>5</b>	<b>Peridynamics for Laminated Composite Materials . . . . .</b>	<b>75</b>
5.1	Basics . . . . .	75
5.2	Fiber-Reinforced Lamina . . . . .	77
5.3	Laminated Composites . . . . .	79
5.4	Peridynamic Material Parameters . . . . .	89
5.4.1	Material Parameters for a Lamina . . . . .	89
5.4.2	Material Parameters for Transverse Deformation . . . . .	98
5.5	Surface Effects . . . . .	104
	Reference . . . . .	113
<b>6</b>	<b>Damage Prediction . . . . .</b>	<b>115</b>
6.1	Critical Stretch . . . . .	115
6.2	Damage Initiation . . . . .	121
6.3	Local Damage . . . . .	121
6.4	Failure Load and Crack Path Prediction . . . . .	122
	References . . . . .	124
<b>7</b>	<b>Numerical Solution Method . . . . .</b>	<b>125</b>
7.1	Spatial Discretization . . . . .	127
7.2	Volume Correction Procedure . . . . .	129
7.3	Time Integration . . . . .	130
7.4	Numerical Stability . . . . .	132
7.5	Adaptive Dynamic Relaxation . . . . .	136
7.6	Numerical Convergence . . . . .	139
7.7	Surface Effects . . . . .	142
7.8	Application of Initial and Boundary Conditions . . . . .	143
7.9	Pre-existing Crack and No-Fail Zone . . . . .	143
7.10	Local Damage for Crack Growth . . . . .	144
7.11	Spatial Partitioning . . . . .	146
7.12	Utilization of Parallel Computing and Load Balancing . . . . .	148
	References . . . . .	150
<b>8</b>	<b>Benchmark Problems . . . . .</b>	<b>151</b>
8.1	Longitudinal Vibration of a Bar . . . . .	151
8.2	Bar Under Tension . . . . .	153
8.3	Isotropic Plate Under Uniaxial Tension or Uniform Temperature Change . . . . .	154
8.4	Lamina Under Uniaxial Tension or Uniform Temperature Change . . . . .	157
8.5	Block of Material Under Tension . . . . .	160

8.6	Block of Material Under Transverse Loading . . . . .	163
8.7	Block of Material Under Compression . . . . .	164
8.8	Block of Material with a Spherical Cavity Under Radial Extension . . . . .	167
	Reference . . . . .	169
<b>9</b>	<b>Nonimpact Problems . . . . .</b>	<b>171</b>
9.1	Plate with a Circular Cutout Under Quasi-Static Loading . . . . .	171
9.2	Plate with a Pre-existing Crack Under Velocity Boundary Conditions . . . . .	173
9.3	Bimaterial Strip Subjected to Uniform Temperature Change . . . . .	177
9.4	Rectangular Plate Subjected to Temperature Gradient . . . . .	178
	References . . . . .	180
<b>10</b>	<b>Impact Problems . . . . .</b>	<b>181</b>
10.1	Impact Modeling . . . . .	181
10.1.1	Rigid Impactor . . . . .	181
10.1.2	Flexible Impactor . . . . .	183
10.2	Validation . . . . .	183
10.2.1	Impact of Two Identical Flexible Bars . . . . .	184
10.2.2	A Rigid Disk Impacting on a Rectangular Plate . . . . .	186
10.2.3	Kalthoff-Winkler Experiment . . . . .	188
	References . . . . .	190
<b>11</b>	<b>Coupling of the Peridynamic Theory and Finite Element Method . . . . .</b>	<b>191</b>
11.1	Direct Coupling . . . . .	193
11.2	Validation of Direct Coupling . . . . .	197
11.2.1	Bar Subjected to Tensile Loading . . . . .	197
11.2.2	Plate with a Hole Subjected to Tensile Loading . . . . .	199
	References . . . . .	201
<b>12</b>	<b>Peridynamic Thermal Diffusion . . . . .</b>	<b>203</b>
12.1	Basics . . . . .	203
12.2	Nonlocal Thermal Diffusion . . . . .	204
12.3	State-Based Peridynamic Thermal Diffusion . . . . .	205
12.4	Relationship Between Heat Flux and Peridynamic Heat Flow States . . . . .	211
12.5	Initial and Boundary Conditions . . . . .	213
12.5.1	Initial Conditions . . . . .	215
12.5.2	Boundary Conditions . . . . .	215
12.6	Bond-Based Peridynamic Thermal Diffusion . . . . .	219
12.7	Thermal Response Function . . . . .	219
12.8	Peridynamic Microconductivity . . . . .	220
12.8.1	One-Dimensional Analysis . . . . .	220

12.8.2	Two-Dimensional Analysis . . . . .	221
12.8.3	Three-Dimensional Analysis . . . . .	222
12.9	Numerical Procedure . . . . .	223
12.9.1	Discretization and Time Stepping . . . . .	224
12.9.2	Numerical Stability . . . . .	225
12.10	Surface Effects . . . . .	227
12.11	Validation . . . . .	230
12.11.1	Finite Slab with Time-Dependent Surface Temperature . . . . .	230
12.11.2	Slab with Convection Boundary Condition . . . . .	231
12.11.3	Plate Under Thermal Shock with Insulated Boundaries . . . . .	234
12.11.4	Three-Dimensional Block with Temperature and Insulated Boundaries . . . . .	235
12.11.5	Dissimilar Materials with an Insulated Crack . . . . .	237
12.11.6	Thick Plate with Two Inclined Insulated Cracks . . . . .	240
	References . . . . .	244
<b>13</b>	<b>Fully Coupled Peridynamic Thermomechanics . . . . .</b>	<b>245</b>
13.1	Local Theory . . . . .	247
13.2	Nonlocal Theory . . . . .	248
13.3	Peridynamic Thermomechanics . . . . .	248
13.3.1	Peridynamic Thermal Diffusion with a Structural Coupling Term . . . . .	249
13.3.2	Peridynamic Deformation with a Thermal Coupling Term . . . . .	252
13.3.3	Bond-Based Peridynamic Thermomechanics . . . . .	254
13.4	Nondimensional Form of Thermomechanical Equations . . . . .	256
13.4.1	Characteristic Length and Time Scales . . . . .	257
13.4.2	Nondimensional Parameters . . . . .	257
13.5	Numerical Procedure . . . . .	260
13.6	Validation . . . . .	263
13.6.1	A Semi-infinite Bar Under Thermal Loading . . . . .	264
13.6.2	Thermoelastic Vibration of a Finite Bar . . . . .	266
13.6.3	Plate Subjected to a Shock of Pressure and Temperature, and Their Combination . . . . .	267
13.6.4	A Block of Material Under Thermal Loading . . . . .	270
	References . . . . .	277
	<b>Appendix . . . . .</b>	<b>279</b>
A.1	Concept of State . . . . .	279
A.2	The Fréchet Derivative . . . . .	284
	<b>Index . . . . .</b>	<b>285</b>
