

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Canonical Coherent States</b>	<b>15</b>
2.1	Minimal Uncertainty States	16
2.2	The Group Theoretical Backdrop	20
2.3	Some Functional Analytic Properties	23
2.4	A Complex Analytic Viewpoint	27
2.5	An Alternative Representation and Squeezed States	31
2.6	Some Geometrical Considerations	34
2.7	Outlook	35
<b>3</b>	<b>Positive Operator-Valued Measures and Frames</b>	<b>37</b>
3.1	Definitions and Main Properties	38
3.1.1	Examples of POV-Measures	41
3.2	The Case of a Tight Frame	43
3.3	Frames and Semi-frames	45
3.3.1	Frames Revisited	45
3.3.2	Upper Semi-frames	46
3.3.3	Lower Semi-frames, Duality	49
3.4	Discrete Frames and Semi-frames	54
3.4.1	Discrete Frames	54
3.4.2	Weighted and Controlled Frames	57
3.4.3	Fusion Frames	57
3.4.4	Discrete Semi-frames	58
3.4.5	Discretization	60
<b>4</b>	<b>Some Group Theory</b>	<b>61</b>
4.1	Homogeneous Spaces, Quasi-Invariant, and Invariant Measures	61
4.1.1	A Simple Example	63
4.1.2	An Example Using the Affine Group	67
4.2	Induced Representations and Systems of Covariance	69
4.2.1	Vector Coherent States	73

4.2.2	Discrete Series Representations of $SU(1,1)$ .....	76
4.2.3	The Regular Representations of a Group .....	83
4.3	An Extended Schur's Lemma .....	84
4.4	Harmonic Analysis on Locally Compact Abelian Groups .....	86
4.4.1	Basic Notions .....	86
4.4.2	Lattices in LCA Groups .....	88
4.4.3	Sampling in LCA Groups .....	89
4.5	Lie Groups and Lie Algebras: A Reminder .....	90
4.5.1	Lie Algebras .....	91
4.5.2	Lie Groups .....	93
4.5.3	Extensions of Lie Algebras and Lie Groups.....	98
4.5.4	Contraction of Lie Algebras and Lie Groups.....	101
<b>5</b>	<b>Hilbert Spaces with Reproducing Kernels and Coherent States .....</b>	<b>105</b>
5.1	A First Look at Reproducing Kernels .....	106
5.2	Some Illustrative Examples .....	111
5.2.1	The Canonical CS .....	111
5.2.2	An Example from a Hardy Space .....	111
5.2.3	An Example of VCS from a Matrix Domain .....	112
5.3	A Second Look at Reproducing Kernels .....	114
5.3.1	A Motivating Example .....	114
5.3.2	Measurable Fields and Direct Integrals.....	115
5.3.3	Example Using a POV Function .....	117
5.4	Reproducing Kernel Hilbert Spaces: General Construction.....	117
5.4.1	Positive-Definite Kernels and Evaluation Maps.....	118
5.4.2	Coherent States and POV Functions .....	122
5.4.3	Some Isomorphisms, Bases, and $\nu$ -Selections .....	125
5.4.4	A Reconstruction Problem: Example of a Holomorphic Map .....	128
5.5	Some Properties of Reproducing Kernel Hilbert Spaces .....	130
<b>6</b>	<b>Square Integrable and Holomorphic Kernels .....</b>	<b>133</b>
6.1	Square Integrable Kernels.....	134
6.2	Holomorphic Kernels .....	136
6.3	Some Examples of Coherent States from Square Integrable Kernels .....	140
6.3.1	Standard Versus Circle Coherent States .....	141
6.3.2	Coherent States for Motion on the Circle .....	141
6.3.3	A General Holomorphic Construction.....	143
6.3.4	Nonlinear Coherent States and Orthogonal Polynomials .	146
6.4	Gazeau–Klauder CS .....	151
6.4.1	Coherent States for Discrete Spectrum Dynamics .....	151
6.4.2	Statistical and Semi-Classical Aspects .....	153
6.4.3	Imposing the Hamiltonian Lower Symbol .....	155
6.4.4	Action-Angle Coherent States .....	156
6.4.5	Two Examples of Action-Angle Coherent States .....	157

6.4.6	Coherent States for Continuum Dynamics .....	160
6.4.7	Coherent States for Discrete <i>and</i> Continuum Dynamics ..	161
6.4.8	A General Expression .....	162
6.5	CS on Quaternionic Hilbert Spaces and Hilbert Modules .....	163
<b>7</b>	<b>Covariant Coherent States</b> .....	165
7.1	Square-Integrable Covariant Coherent States .....	166
7.1.1	A General Definition .....	166
7.1.2	The Gilmore–Perelomov CS .....	168
7.1.3	Vector and Matrix CS: A Geometrical Setting .....	170
7.2	Example: The Classical Theory of Coherent States .....	174
7.2.1	CS of Compact Semisimple Lie Groups.....	174
7.2.2	CS of Noncompact Semisimple Lie Groups .....	177
7.2.3	CS of Non-Semisimple Lie Groups.....	179
7.3	Covariant CS: The General Case .....	180
7.3.1	Generalized Perelomov CS.....	182
7.3.2	Continuous Semi-Frames .....	183
7.3.3	Some Further Generalizations .....	184
7.4	CS on Spheres Through Heat Kernels .....	186
7.5	CS in Loop Quantum Gravity and Quantum Cosmology .....	193
7.6	CS on Conformal Classical Domains .....	194
7.6.1	Beyond Square Integrability and Singular Orbit .....	201
<b>8</b>	<b>Coherent States from Square Integrable Representations</b> .....	203
8.1	Square Integrable Group Representations.....	204
8.1.1	Example: The Connected Affine Group .....	209
8.2	Orthogonality Relations.....	212
8.3	A Class of Semidirect Product Groups.....	216
8.3.1	Three Concrete Examples .....	221
8.3.2	A Broader Setting.....	225
8.4	A Generalization: $\alpha$ - and $V$ -Admissibility .....	226
8.4.1	Example of the Galilei Group .....	231
8.4.2	CS of the Isochronous Galilei Group .....	236
8.4.3	Atomic Coherent States .....	243
<b>9</b>	<b>CS of General Semidirect Product Groups</b> .....	245
9.1	Squeezed States .....	246
9.2	Geometry of Semidirect Product Groups .....	250
9.2.1	A Special Class of Orbits.....	250
9.2.2	The Coadjoint Orbit Structure of $\Gamma$ .....	252
9.2.3	Measures on $\Gamma$ .....	256
9.2.4	Induced Representations of Semidirect Products .....	258
9.3	CS of Semidirect Products .....	260
9.3.1	Admissible Affine Sections .....	267

<b>10</b>	<b>CS of the Relativity Groups</b>	271
10.1	The Poincaré Groups $\mathcal{P}_+^\uparrow(1,3)$ and $\mathcal{P}_+^\uparrow(1,1)$	271
10.1.1	The Poincaré Group $\mathcal{P}_+^\uparrow(1,3)$ in 1 + 3 Dimensions	271
10.1.2	The Poincaré Group $\mathcal{P}_+^\uparrow(1,1)$ in 1 + 1 Dimensions	282
10.1.3	Poincaré CS: The Massless Case	287
10.2	The Galilei Groups $\tilde{\mathcal{G}}(1,1)$ and $\tilde{\mathcal{G}} \equiv \tilde{\mathcal{G}}(3,1)$	290
10.3	The (1+1)-Dimensional Anti-de Sitter Group $SO_o(1,2)$ and Its Contraction(s)	292
<b>11</b>	<b>Integral Quantization</b>	305
11.1	What is Really Quantization?	306
11.2	Sea Star Algebra	307
11.2.1	Exploring the Plane with a Five-Fold Set of Arms	307
11.2.2	What About the Continuous Frame?	311
11.2.3	Probabilistic Aspects	312
11.2.4	Beyond Coherent States: Integral Quantization	312
11.3	Integral Quantization	313
11.3.1	Covariant Integral Quantization	314
11.4	Example: Weyl-Heisenberg Covariant Integral Quantization(s)	316
11.4.1	Quantization with a Generic Weight Function	316
11.4.2	Regular and Isometric Quantizations	318
11.4.3	Elliptic Regular Quantizations	319
11.4.4	Elliptic Regular Quantizations that Are Isometric	321
11.4.5	Hyperbolic Regular Quantizations	321
11.4.6	Hyperbolic Regular Quantizations that Are Isometric	321
11.4.7	Quantum Harmonic Oscillator According to $\varpi$	321
11.4.8	Variations on the Wigner Function	322
11.5	Weyl-Heisenberg Integral Quantizations of Functions and Distributions	323
11.5.1	Acceptable Probes $\rho$	323
11.5.2	Quantizable Functions	325
11.5.3	Quantizable Distributions	328
11.6	Quantization with Coherent States or Frame: General	332
11.6.1	A First Example: Frame Quantization of Finite Sets	333
11.6.2	A Second Example: CS Quantization of Motion on the Circle	339
11.6.3	Quantization With Action-Angle CS for Bounded Motions	342
11.7	Application to Various Systems	344
<b>12</b>	<b>Wavelets</b>	347
12.1	A Word of Motivation	347
12.2	Derivation and Properties of the 1-D Continuous Wavelet Transform	351
12.3	A Mathematical Aside: Extension to Distributions	357

12.4	Interpretation of the Continuous Wavelet Transform .....	362
12.4.1	The CWT As Phase Space Representation .....	362
12.4.2	Localization Properties and Physical Interpretation of the CWT.....	363
12.5	Discretization of the Continuous WT: Discrete Frames .....	365
12.6	Ridges and Skeletons.....	367
12.7	Applications .....	368
12.7.1	Application to NMR Spectroscopy .....	370
<b>13</b>	<b>Discrete Wavelet Transforms .....</b>	<b>379</b>
13.1	The Discrete WT .....	379
13.1.1	Multiresolution Analysis, Orthonormal Wavelet Bases.....	380
13.1.2	Connection with Filters and the Subband Coding Scheme .....	382
13.1.3	Generalizations .....	384
13.1.4	Applications.....	385
13.2	Towards a Fast CWT: Continuous Wavelet Packets .....	385
13.3	Algebraic Wavelets .....	387
13.4	A Group-Theoretical Approach to Discrete Wavelet Transforms ..	390
13.4.1	Wavelets on the Finite Field $\mathbb{Z}_p$ .....	390
13.4.2	Wavelets on $\mathbb{Z}_p$ : Pseudodilations and Group Structure ...	392
13.5	Wavelets on a Discrete Abelian Group .....	394
13.5.1	Compatible Filters: The General Case.....	395
13.5.2	Compatible Filters in the Case $G = \mathbb{R}, \mathcal{A} \subset \mathbb{Z}_+$ .....	400
13.5.3	Cohomological Interpretation .....	402
13.5.4	Compatible Filters and Discretized Wavelet Transform ..	404
<b>14</b>	<b>Multidimensional Wavelets and Generalizations .....</b>	<b>411</b>
14.1	Going to Higher Dimensions .....	411
14.2	Mathematical Analysis .....	412
14.2.1	The CWT in $n$ Dimensions .....	412
14.2.2	The CWT of Radial Functions .....	421
14.3	The Two-Dimensional CWT.....	423
14.3.1	Minimality Properties .....	423
14.3.2	Interpretation, Visualization Problems, Calibration.....	426
14.3.3	Practical Applications of the CWT in Two Dimensions ..	429
14.4	The Discrete WT in Higher Dimensions .....	434
14.4.1	Applications of the 2-D DWT.....	436
14.4.2	The DWT of Radial Functions .....	437
14.5	Generalizations of 2-D Wavelets .....	438
14.5.1	Continuous Wavelet Packets in Two Dimensions .....	439
14.5.2	General Directional Wavelets .....	440
14.5.3	Multiselective Wavelets .....	440
14.5.4	Ridgelets .....	445

14.5.5	Curvelets and Contourlets .....	447
14.5.6	Shearlets .....	450
14.5.7	Geometrical “Wavelets”: Dictionaries, Molecules .....	455
<b>15</b>	<b>Wavelets on Manifolds</b> .....	457
15.1	Wavelets on the Two-Sphere .....	457
15.1.1	Stereographic Wavelets on the Two-Sphere .....	458
15.1.2	Poisson Wavelets on the Sphere .....	470
15.1.3	Discrete Spherical Wavelets .....	471
15.2	Wavelets on Other Manifolds .....	477
15.2.1	Wavelets on Conic Sections .....	477
15.2.2	Wavelets on the $n$ -Sphere and the Two-Torus .....	479
15.2.3	Wavelets on Surfaces of Revolution .....	482
15.2.4	Local Wavelets .....	488
15.3	Wavelets on Graphs .....	491
<b>16</b>	<b>Wavelets Related to Affine Groups</b> .....	495
16.1	The Affine Weyl–Heisenberg Group .....	495
16.2	The Affine or Similitude Groups of Spacetime .....	499
16.2.1	Kinematical Wavelets, Motion Analysis .....	499
16.2.2	The Affine Galilei Group .....	502
16.2.3	The (Restricted) Galilei–Schrödinger Group .....	506
16.2.4	The Affine Poincaré Group and the Conformal Group ...	509
16.3	Some Generalizations: Wavelets on Riemannian Symmetric Spaces .....	510
<b>17</b>	<b>The Discretization Problem: Frames, Sampling, and All That</b> .....	515
17.1	The Weyl–Heisenberg Group or Canonical CS .....	516
17.2	Wavelet Frames .....	519
17.2.1	Alternative Approaches to the “ $ax + b$ ” Group .....	520
17.3	Frames for Affine Semidirect Products .....	521
17.3.1	The Affine Weyl–Heisenberg Group .....	521
17.3.2	The Affine Poincaré Groups .....	521
17.3.3	Discrete Frames for General Semidirect Products .....	524
17.4	Groups Without Dilations: The Poincaré Groups .....	526
17.4.1	The Poincaré Group $\mathcal{P}_+^\uparrow(1, 1)$ .....	527
17.4.2	The Poincaré Group $\mathcal{P}_+^\uparrow(1, 3)$ .....	532
17.5	Generalities on Sampling .....	536
<b>18</b>	<b>Conclusion and Outlook</b> .....	537
18.1	Present Status of CS and Wavelet Research .....	537
18.2	What Is the Future from Our Point of View? .....	539
	<b>References</b> .....	541
	<b>Index</b> .....	573

Coherent States, Wavelets, and Their Generalizations

Ali, S.T.; Antoine, J.-P.; Gazeau, J.

2014, XVIII, 577 p. 31 illus., 8 illus. in color., Hardcover

ISBN: 978-1-4614-8534-6
