Part I DATA EXPLORATION, ESTIMATION AND SIMULATION	1
1 UNIVARIATE DATA DISTRIBUTIONS	3
1.1 Probability Distributions and Their Parameters	3
1.1.1 Standard Probability Distribution Families	3
1.1.2 Estimation from Empirical Data	18
1.1.3 Quantiles and Q-Q Plots	22
1.2 Observations and Nonparametric Density Estimation	31
1.2.1 Sample Data	31
1.2.2 Nonparametric Estimation	35
1.2.3 Histograms	39
1.2.4 Kernel Density Estimation	41
1.2.5 Empirical Q-Q Plots	48
1.3 Monte Carlo Computations	49
1.3.1 Generating Random Samples in R	49
1.3.2 Limit Theorems and Monte Carlo Computations	51
1.3.3 Home Grown Random Samples	60
Problems	62
Notes & Complements	67
2 HEAVY TAIL DISTRIBUTIONS	69
2.1 A Primer on Extreme Value Theory	69
2.1.1 Empirical Evidence of Extreme Events	69
2.1.2 Pareto Distributions	71
2.1.3 Tidbits of Extreme Value Theory	75
2.2 GEV & GPD Parameter Estimation	83
2.2.1 The Method of L-Moments	83
2.2.2 Maximum Likelihood Estimation	90

2.2.3	An Example Chosen for Pedagogical Reasons	93
2.2.4	Implementation of the Block-Maxima Method	95
2.3	Semi Parametric Estimation	97
2.3.1	Threshold Exceedances	97
2.3.2	Semi Parametric Estimation	100
2.3.3	The Example of the PCS Index Revisited	102
2.3.4	The Example of the Weekly S&P Returns	106
	Appendix: Risk Measures: Why and What For?	109
	Problems	114
	Notes & Complements	118
3	DEPENDENCE & MULTIVARIATE DATA EXPLORATION	121
3.1	Multivariate Data and First Measure of Dependence	121
3.1.1	Density Estimation	123
3.1.2	The Correlation Coefficient	126
3.2	The Multivariate Normal Distribution	128
3.2.1	Important Remark about Independence	130
3.2.2	Simulation of Random Samples	130
3.2.3	The Bivariate Case	131
3.2.4	A Simulation Example	132
3.2.5	Let's Have Some Coffee	133
3.2.6	Is the Joint Distribution Normal?	134
3.3	Marginals and More Measures of Dependence	135
3.3.1	Estimation of the Coffee Log-Return Distributions	136
3.3.2	More Measures of Dependence	142
3.4	Copulas	144
3.4.1	Definitions and First Properties	145
3.4.2	Examples of Copula Families	146
3.4.3	Copulas and General Bivariate Distributions	148
3.4.4	Fitting Copulas	151
3.4.5	Monte Carlo Simulations with Copulas	152
3.4.6	A Risk Management Example	154
3.4.7	A First Example from the Credit Markets	157
3.4.8	Higher Dimensional Copulas	158
3.4.9	Multi Name Credit Derivatives and CDOs	164
3.5	Principal Component Analysis	171
3.5.1	Identification of the Principal Components of a Data Set	172
3.5.2	PCA with R	175
3.5.3	Effective Dimension of the Space of Yield Curves	175
3.5.4	Swap Rate Curves	178
	Appendix 1: Calculus with Random Vectors and Matrices	180
	Appendix 2: Families of Copulas	183
	Problems	186
	Notes & Complements	195

Part II REGRESSION 197

4	PARAMETRIC REGRESSION	199
4.1	Simple Linear Regression	199
4.1.1	Getting the Data	200
4.1.2	First Plots	201
4.1.3	Regression Set-up	202
4.1.4	Simple Linear Regression	205
4.1.5	Cost Minimizations	208
4.1.6	Regression as a Minimization Problem	209
4.2	Regression for Prediction & Sensitivities	211
4.2.1	Prediction	211
4.2.2	Introductory Discussion of Sensitivity and Robustness	213
4.2.3	Comparing L2 and L1 Regressions	214
4.2.4	Taking Another Look at the Coffee Data	216
4.3	Smoothing Versus Distribution Theory	217
4.3.1	Regression and Conditional Expectation	218
4.3.2	Maximum Likelihood Approach	219
4.4	Multiple Regression	224
4.4.1	Notation	224
4.4.2	The R Function <code>lm</code>	225
4.4.3	R^2 as a Regression Diagnostic	226
4.5	Matrix Formulation and Linear Models	228
4.5.1	Linear Models	228
4.5.2	Least Squares (Linear) Regression Revisited	229
4.5.3	Confidence and Prediction Intervals	235
4.5.4	First Extensions	236
4.5.5	Testing the CAPM	239
4.6	Polynomial Regression	243
4.6.1	Polynomial Regression as a Linear Model	243
4.6.2	Example of R Commands	243
4.6.3	Important Remark	244
4.6.4	Prediction with Polynomial Regression	245
4.6.5	Choice of the Degree p	248
4.7	Nonlinear Regression	249
4.7.1	A First Model	249
4.7.2	Transformation of the Variables	251
4.7.3	A Second Model	252
4.8	Term Structure of Interest Rates: A Crash Course	252
4.8.1	Zero Coupon Bonds	253
4.8.2	Coupon Bearing Bonds	254
4.8.3	Constructing the Term Structure by Linear Regression?	255
4.8.4	Clean Prices & Duration	256
4.8.5	The Three Different Forms of Term Structure	257

4.9	Parametric Yield Curve Estimation	258
4.9.1	Estimation Procedures	259
4.9.2	Practical Implementation	260
4.9.3	R Experiments	261
4.9.4	Concluding Remarks	263
	Appendix: Cautionary Notes on Some R Idiosyncracies	264
	Problems	268
	Notes & Complements	276
5	LOCAL AND NONPARAMETRIC REGRESSION	277
5.1	Review of the Regression Setup	277
5.2	Basis Expansion Regression	279
5.2.1	Natural Splines as Local Smoothers	279
5.2.2	Feature Function Expansions	280
5.3	Nonparametric Scatterplot Smoothers	283
5.3.1	Smoothing Splines	283
5.3.2	Locally Weighted Regression	285
5.3.3	A Robust Smoother	286
5.3.4	The Super Smoother	287
5.3.5	The Kernel Smoother	287
5.4	More Yield Curve Estimation	291
5.4.1	A First Estimation Method	291
5.4.2	A Direct Application of Smoothing Splines	292
5.4.3	US and Japanese Instantaneous Forward Rates	292
5.5	Multivariate Kernel Regression	293
5.5.1	Running the Kernel in R	296
5.5.2	An Example Involving the June 1998 S&P Futures Contract	297
5.6	Projection Pursuit Regression	303
5.6.1	The R Function <code>ppr</code>	304
5.6.2	<code>ppr</code> Prediction of the S&P Afternoon Indicators	306
5.6.3	More on the Comparison of the Two Methods	310
5.7	Nonparametric Option Pricing	311
5.7.1	Nonparametric Pricing Alternatives	311
5.7.2	Description of the Data	312
5.7.3	The Actual Experiment	313
5.7.4	Numerical Results	319
	Appendix: Kernel Density Estimation & Kernel Regression	322
	Problems	324
	Notes & Complements	338

Part III TIME SERIES & STATE SPACE MODELS 343

6 TIME SERIES MODELS: AR, MA, ARMA, & ALL THAT 345

6.1	Notation and First Definitions	345
6.1.1	Notation	346
6.1.2	Regular Time Series and Signals	346
6.1.3	Calendar and Irregular Time Series	348
6.1.4	Creating and Plotting <code>timeSeries</code> Objects in R	349
6.1.5	High Frequency Data	349
6.1.6	<code>TimeDate</code> Manipulations	353
6.2	Time Dependent Statistics and Stationarity	355
6.2.1	Statistical Moments	356
6.2.2	The Notion of Stationarity	356
6.2.3	The Search for Stationarity	361
6.2.4	The Example of the CO_2 Concentrations	363
6.3	First Examples of Models	367
6.3.1	White Noise	367
6.3.2	Random Walk	371
6.3.3	Auto Regressive Time Series	372
6.3.4	Moving Average Time Series	376
6.3.5	Using the Backward Shift Operator B	379
6.3.6	Linear Processes	380
6.3.7	Causality, Stationarity and Invertibility	381
6.3.8	ARMA Time Series	385
6.3.9	ARIMA Models	386
6.4	Fitting Models to Data	386
6.4.1	Practical Steps	387
6.4.2	R Implementation	388
6.5	Putting a Price on Temperature	398
6.5.1	Generalities on Degree Days	398
6.5.2	Temperature Options	399
6.5.3	Statistical Analysis of Temperature Historical Data	402
	Problems	415
	Notes & Complements	420

7 MULTIVARIATE TIME SERIES, LINEAR SYSTEMS AND KALMAN FILTERING 423

7.1	Multivariate Time Series	423
7.1.1	Stationarity and Auto-Covariance Functions	424
7.1.2	Multivariate White Noise	424
7.1.3	Multivariate AR Models	425
7.1.4	Back to Temperature Options	429
7.1.5	Multivariate MA & ARIMA Models	432
7.1.6	Cointegration	433
7.2	State Space Models: Mathematical Set Up	435

7.3	Factor Models as Hidden Markov Processes	437
7.3.1	Factor Models	437
7.3.2	Assumptions of the Model	438
7.3.3	Dynamics of the Factors	439
7.4	Kalman Filtering of Linear Systems	439
7.4.1	One-Step-Ahead Prediction	440
7.4.2	Derivation of the Recursive Filtering Equations	440
7.4.3	Filtering	444
7.4.4	More Predictions	445
7.4.5	Estimation of the Parameters	447
7.5	Applications to Linear Models	448
7.5.1	State Space Representation of Linear Models	448
7.5.2	Linear Models with Time Varying Coefficients	449
7.5.3	CAPM with Time Varying β 's	450
7.6	State Space Representation of Time Series	453
7.6.1	The Case of AR Series	453
7.6.2	The General Case of ARMA Series	455
7.6.3	Fitting ARMA Models by Maximum Likelihood	456
7.7	Example: Prediction of Quarterly Earnings	457
	Problems	461
	Notes & Complements	471
8	NONLINEAR TIME SERIES: MODELS AND SIMULATION	473
8.1	First Nonlinear Time Series Models	473
8.1.1	Fractional Time Series	474
8.1.2	Nonlinear Auto-Regressive Series	475
8.1.3	Statistical Estimation	476
8.2	More Nonlinear Models: ARCH, GARCH & All That	478
8.2.1	Motivation	478
8.2.2	ARCH Models	479
8.2.3	GARCH Models	481
8.2.4	Summary	481
8.2.5	R Commands	482
8.2.6	Fitting a GARCH Model to Real Data	483
8.2.7	Generalizations	493
8.3	Stochastic Volatility Models	495
8.3.1	Information Structure	495
8.3.2	State Space Formulation	496
8.3.3	Excess Kurtosis	496
8.3.4	Leverage Effect	497
8.3.5	Comparison with ARCH and GARCH Models	498
8.3.6	The Smile Effect	499

8.4	Discretization of Stochastic Differential Equations	500
8.4.1	Discretization Schemes	501
8.4.2	Monte Carlo Simulations: A First Example	503
8.5	Random Simulation and Scenario Generation	505
8.5.1	A Simple Model for the S&P 500 Index	505
8.5.2	Modeling the Short Interest Rate	508
8.5.3	Modeling the Spread	509
8.5.4	Putting Everything Together	511
8.6	Filtering of Nonlinear Systems	513
8.6.1	Hidden Markov Models	513
8.6.2	General Filtering Approach	514
8.6.3	Particle Filter Approximations	515
8.6.4	Filtering in Finance? Statistical Issues	519
8.6.5	Application: Tracking Volatility	520
	Problems	526
	Notes & Complements	531

Part IV BACKGROUND MATERIAL 535

9 APPENDICES 537

9.1	Appendix A: A Quick Introduction to R	537
9.1.1	Starting R Under Mac OS, Windows and Under UNIX	537
9.1.2	Creating R Objects	538
9.1.3	Random Generation and White Noise	540
9.1.4	More Functions and for Loops	542
9.1.5	Importing Data	544
9.1.6	Programming in R: A First Function	549
9.2	Appendix B: A Crash Course on Black-Scholes Option Pricing	551
9.2.1	Generalities on Option Pricing	551
	Notes & Complements	558
