

# Contents

<b>1</b>	<b>Introduction .....</b>	<b>1</b>
<b>2</b>	<b>Definitions .....</b>	<b>9</b>
2.1	Local Thermodynamic Equilibrium (LTE).....	9
2.2	The Equation of Radiative Transfer .....	10
2.3	The Planck or Emission Mean Opacity .....	17
2.4	The Rosseland Mean Opacity.....	20
2.5	Other Mean Opacities .....	22
2.6	Differences Between the Various Mean Opacities .....	22
2.7	Summary.....	27
<b>3</b>	<b>Atomic and Molecular Structure .....</b>	<b>29</b>
3.1	Structure of Atoms and Ions .....	30
3.1.1	The Hartree–Fock Model.....	31
3.1.2	Approximations to the Hartree–Fock Model .....	34
3.1.3	The Thomas–Fermi Model .....	37
3.1.4	The Hartree–Fock–Slater Method .....	38
3.1.5	Parametric Potentials .....	38
3.1.6	The Hartree–Plus–Statistical–Exchange Method .....	40
3.1.7	The Multi-configuration Approximation .....	40
3.1.8	The Close-Coupling Approximation .....	41
3.1.9	Isoelectronic Sequences .....	43
3.1.10	The Screening Constant Method.....	43
3.1.11	The Quantum Defect Method .....	49
3.1.12	Multiple Scattering $X\alpha$ Method .....	51
3.2	Structure of Molecules and Molecular Ions .....	52
3.2.1	Diatomic Molecules .....	53
	Internuclear Potential Function	
	and Vibrational Motion .....	55
	Electronic States and Angular Momentum Coupling..	59

3.2.2	Polyatomic Molecules .....	62
	Vibrations .....	62
	Rotation and Rotation–Vibration Interaction .....	64
	Symmetric Top Molecules .....	64
	Asymmetric Top Molecules .....	65
	Ab Initio Calculations of Rotation–Vibration Wave Functions and Energies .....	66
	Electronic States .....	68
	Ab Initio Calculation of Wave Functions and Potential Surfaces .....	69
3.3	Summary .....	78
<b>4</b>	<b>Equation of State (EOS) .....</b>	<b>81</b>
4.1	Atomic Processes .....	83
4.1.1	The Model of the Mean Ion with Unfolded Term Splitting (MIUTS) .....	84
	The Screening Constant Method .....	85
	Continuum Lowering, $E_0$ .....	89
	The Thomas–Fermi Model .....	91
	Zink’s Parameterized T–F Model .....	93
	The Thomas–Fermi Shell Model .....	95
	The Relativistic Hartree–Fock–Slater Model .....	97
	The “Muffin-Tin” Model .....	98
	Unfolding the Mean Ion Model .....	98
4.1.2	The Method of Detailed Configuration Accounting with Explicit Term Splitting (DCAETS) .....	99
4.2	Molecular Processes .....	103
4.2.1	Homogeneous Chemical Equilibrium in the Gas Phase ..	104
4.2.2	Disequilibrium Abundances .....	114
4.2.3	Heterogeneous Chemical Equilibrium Between Gas and Condensed Phases .....	115
4.3	Summary .....	120
<b>5</b>	<b>Radiative Cross Sections .....</b>	<b>123</b>
5.1	Basic Concepts .....	123
5.1.1	Classical Description .....	124
5.1.2	Quantum Mechanical Description .....	131
5.2	Absorption in the Single-Electron Dipole Approximation .....	133
5.2.1	Atomic Cross Sections .....	133
	Bound–Bound Processes .....	133
	Bound–Free Processes .....	145
	Free–Free Processes .....	149
5.2.2	Molecular Cross Sections .....	152
	Physics of Molecular Transitions .....	152
	Rotational Transitions .....	153
	Vibration–Rotation Band Strengths .....	155

	Diatomic Molecules .....	155
	Polyatomic Molecules .....	158
	Electronic Transitions .....	160
	Diatomic Molecules .....	160
	Polyatomic Molecules .....	163
	Photoionization .....	172
	Photodissociation .....	174
	Methods for Determining Molecular Band Strengths, Oscillator Strengths, and Cross Sections .....	178
	Experimental Methods .....	178
	Theoretical Calculations of Molecular Transition Probabilities .....	181
	H-F, LCAO-MO, and MCA Methods .....	181
	Photoionization .....	193
	Photodissociation .....	201
5.3	Collective Effects .....	208
5.3.1	Atomic Auger Transitions .....	209
5.3.2	Molecular Autoionization and Predissociation .....	212
5.3.3	Collective Response of the Atom or Molecule as a Whole .....	213
	The Polarization Propagator Method .....	218
5.3.4	Interaction of Radiation with the Plasma .....	225
5.4	Scattering .....	227
5.4.1	Nonrelativistic Scattering .....	227
5.4.2	Form Factors .....	229
5.4.3	Molecular Scattering .....	230
5.4.4	Calculation of the Scattering Cross Section from the Absorption Cross Section .....	233
5.5	Relativity, Multipole, and Other Effects .....	235
5.5.1	Bound-Free Processes .....	235
5.5.2	Bound-Bound Processes .....	241
5.5.3	Free-Free Processes .....	242
	Electron-Ion Interaction .....	242
	Electron-Electron Interaction .....	243
5.6	Extinction by Grains and Droplets .....	244
5.6.1	Basic Relationships .....	245
5.6.2	Spherical Particles .....	246
	Uniform Particles .....	246
	Homogeneously Layered Core-Mantle Particles .....	252
5.6.3	Nonspherical Particles .....	254
	Symmetric Nonspherical Particles .....	254
	Randomly Shaped Particles .....	255
5.6.4	Refractive Indices and Particle Size Distributions .....	259
5.7	Summary .....	260

<b>6</b>	<b>Continuum Transitions</b> .....	263
6.1	Bound–Free Absorption.....	263
6.1.1	Photoionization .....	263
6.1.2	Photodissociation .....	265
6.2	Free–Free Absorption .....	268
6.2.1	Free–Free Absorption by Ions .....	268
6.2.2	Free–Free Absorption by Neutrals.....	273
6.3	Compton Scattering by Free Electrons .....	277
6.4	Extinction by Grains and Droplets .....	283
6.5	Summary.....	285
<b>7</b>	<b>Bound–Bound (Line) Transitions</b> .....	287
7.1	Line Transitions of Thermally Excited States.....	287
7.1.1	Atomic Line Transitions.....	287
7.1.2	Molecular Vibration–Rotation Line Transitions .....	288
7.1.3	Vibronic Transitions .....	291
7.2	Line Broadening.....	291
7.2.1	Doppler Broadening .....	294
7.2.2	Broadening by Electron Impacts .....	296
	The Impact Approximation .....	296
	Nonhydrogenic Neutral Atoms .....	296
	Nonhydrogenic Ions .....	299
	Hydrogen .....	308
	Hydrogenic Ions .....	309
7.2.3	Broadening by Ion Impacts .....	309
	The Quasi-Static Approximation .....	309
7.2.4	Broadening by Neutral Impacts .....	311
	Resonance Broadening.....	311
	Van der Waals Broadening.....	312
	Pressure Broadening of Vibration–Rotation Lines ....	312
	Infrared and Microwave ‘Continuum’	
	Absorption.....	318
7.2.5	The Total Line Shape for Absorption Lines .....	320
7.2.6	Auto-Ionization, Auger Transition,	
	Dielectronic Recombination .....	320
7.3	Line Splitting and Line Smearing .....	321
7.3.1	Multiplet Splitting .....	321
7.3.2	Statistical Configuration Splitting .....	323
	Unresolved Transition Arrays	
	and Supertransition Arrays .....	328
7.3.3	Molecular Band Models.....	334
	Just-Overlapping Lines Models and Smeared-Line	
	Models .....	334
	Diatomics.....	334
	Polyatomics .....	340

	Other Band Models .....	341
	Regular Models .....	341
	Regular Models for Collision-Broadened Lines (Elsasser Model) .....	341
	Regular Models for Doppler-Broadened Lines.....	342
	Regular Models for Voigt Profile Lines .....	342
	Random Line Models .....	342
	Random Doppler Models.....	344
	Random Mixed Lorentz – Doppler Models .....	345
	Hybrid Models .....	345
	Other Methods for Molecular Bands .....	348
	Time-Correlation Function Method for Absorption	348
	Time-Correlation Method for Vibronic	
	Spectral Functions .....	350
	The Method of Moments .....	354
7.3.4	Opacity Distribution Function (ODF) and Statistical Opacity Sampling (SOS) Techniques .....	356
	The Opacity Distribution Function (ODF) .....	357
	Statistical Opacity Sampling (SOS) Techniques .....	361
7.3.5	Isotope Effects .....	363
7.4	Resonance Scattering .....	363
7.5	Summary.....	365
<b>8</b>	<b>Collision-Induced Absorption (CIA) .....</b>	<b>369</b>
8.1	Pure Rotational and Translational (i.e., $\Delta J = 0$ ) Transitions (Far Infrared) .....	371
8.1.1	Collision-Induced Absorption in a One-Component Gas .....	373
8.1.2	Rare Gas Mixtures.....	375
8.2	Transitions in the Fundamental Vibrational Band (Near Infrared).....	375
8.2.1	Diatomic Gas Pairs (e.g., $H_2-H_2$ ).....	375
8.2.2	Rare Gas Atom – Nonpolar Diatomic Pairs .....	379
8.3	Collision-Induced Absorption in Mixtures of Nonpolar Gases .....	380
8.4	Summary.....	381
<b>9</b>	<b>Electron Conduction and Electron Opacity .....</b>	<b>383</b>
9.1	Conduction by Nondegenerate Nonrelativistic Electrons .....	384
9.2	Conduction by Degenerate Nonrelativistic Electrons .....	386
9.2.1	Conduction in a Partially Degenerate Magnetoplasma ...	392
9.3	Conduction by Degenerate Relativistic Electrons .....	392
9.4	Summary.....	404

<b>10</b>	<b>Equations of State and Opacities for Mixtures</b> .....	405
10.1	The Opacity for Atomic Mixtures .....	405
10.2	Molecular Mixtures .....	408
10.3	Summary .....	410
<b>11</b>	<b>Limits, Approximations, Scaling, and Interpolations</b> .....	411
11.1	Opacity Limits .....	411
11.2	Approximations .....	414
11.2.1	Atomic Ions .....	414
11.2.2	Rectangular ‘Box’ Approximation Molecular Band Model .....	416
11.3	Opacity Scaling .....	418
11.4	Interpolation of Opacities .....	418
11.5	Summary .....	419
<b>12</b>	<b>Uncertainties in Models, Methods, and Calculations</b> .....	421
12.1	Physical Processes .....	421
12.2	Chemical Abundances .....	424
12.3	Mathematical Procedures .....	424
12.4	Summary .....	424
<b>13</b>	<b>Comparisons with Experiments</b> .....	425
13.1	Model and Code Comparisons .....	425
13.1.1	Pure Elements .....	425
13.1.2	Astrophysical Mixtures .....	426
13.2	Experimental Situation .....	427
13.2.1	Molecules .....	427
13.2.2	High-Temperature Plasmas .....	434
13.2.3	Collision-Induced Absorption .....	440
13.3	Summary .....	442
<b>14</b>	<b>Special Cases</b> .....	443
14.1	Opacity Trenches .....	443
14.2	Opacity of Light Element Mixtures Simulating a Heavier Element Opacity .....	444
14.3	Non-LTE Opacity .....	444
14.3.1	Two-Temperature Opacity .....	445
14.3.2	General Non-LTE Opacity .....	446
14.4	Summary .....	455
<b>Appendix A: List of Symbols</b> .....		457
<b>Appendix B: Glossary and Abbreviations</b> .....		469

<b>Appendix C: Some Mathematical Functions</b> .....	479
C.1 Bessel Functions .....	479
C.1.1 Bessel Functions of the First, Second, and Third Kind.....	479
Bessel Functions of the First Kind .....	479
Bessel Functions of the Second Kind (Also Called Weber or Neumann Functions) .....	480
Bessel Functions of the Third Kind (Also Called Hankel Functions) .....	481
C.1.2 Modified Bessel Functions (Also Called Basset Functions) of the First and Second Kind .....	482
Modified Bessel Functions of the First Kind .....	482
Modified Bessel Functions of the Second Kind .....	483
C.1.3 Spherical Bessel Functions .....	484
Spherical Bessel Function of the First Kind .....	484
Spherical Bessel Function of the Second Kind .....	484
Spherical Bessel Functions of the Third Kind (Spherical Hankel Functions) .....	485
C.2 Binomial Function (Hypergeometric Distribution).....	485
C.2.1 Binomial Distribution .....	486
C.3 Fermi Integrals .....	486
C.3.1 Non-relativistic Fermi Integrals .....	486
Approximations .....	487
C.3.2 Relativistic Fermi Integrals .....	488
C.4 Hermite Polynomials .....	488
C.5 Generalized Laguerre Polynomials .....	489
C.6 Legendre Polynomials .....	489
C.6.1 Unassociated Legendre Polynomials .....	489
C.6.2 Associated Legendre Polynomials .....	490
C.7 Coulomb Corrections to Pressure and Entropy of an Ideal Gas of Ions .....	492
C.8 Spherical Harmonics.....	492
C.8.1 Scalar Spherical Harmonics .....	492
C.8.2 Vector Spherical Harmonics .....	493

<b>Appendix D: Units, Conversion Factors, and Fundamental Physical Constants for Opacities .....</b>	<b>495</b>
<b>Appendix E: Some Relevant Websites .....</b>	<b>501</b>
<b>References .....</b>	<b>503</b>
<b>Subject Index .....</b>	<b>563</b>

Opacity

Huebner, W.F.; Barfield, W.D.

2014, XVIII, 572 p. 98 illus., 1 illus. in color., Hardcover

ISBN: 978-1-4614-8796-8
