

Contents

1	Perceptions of the Solar System in History	1
1.1	Evolving Perceptions	1
1.2	Striking Facts About the Solar System	6
1.3	The Methods and Goals of Solar System Astrophysics	9
	Challenges	10
	References	10
2	Basic Tools and Concepts	13
2.1	Circular Arcs and Spherical Astronomy	13
2.1.1	The Law of Cosines for a Spherical Triangle	15
2.1.2	Law of Sines for a Spherical Triangle	19
2.1.3	Other Laws	19
2.1.4	Applications	20
2.2	Properties of Ellipses	25
	Challenges	31
	References	32
3	Celestial Mechanics	33
3.1	The Two-Body Problem	33
3.2	Orbital Elements	38
3.3	The Restricted Three-Body System	40
3.4	Computation of Ephemerides	41
3.5	Kepler's Equation	43
3.6	Uses and Limitations of Two-, Three- and n -Body Solutions	48
3.7	Spin–Orbit Coupling	50
3.7.1	Effect of Tidal Friction on Rotation	50
3.7.2	Effect of Tidal Friction on Orbits	51
3.7.3	Resonances and Commensurabilities	52

3.8	Perturbations	54
3.8.1	Causes and Effects	54
3.8.2	Deriving the Variation in the Orbital Elements	55
	Challenges	61
	References	62
4	The Core of the Solar System: The Sun	65
4.1	The Solar Context	65
4.2	The Sun as a Star in the Milky Way Galaxy	66
4.3	Observable Properties of the Quiet Sun	69
4.4	The Sun's Radiation	70
4.4.1	Luminosity and Surface Brightness	70
4.4.2	Flux and Intensity	74
4.4.3	Black Body Radiation	74
4.4.4	Observed Radiative Properties of the Sun	77
4.5	The Photosphere	78
4.5.1	Opacity and Optical Depth	79
4.5.2	Center-to-Limb Variation	82
4.5.3	Granulation and the Convection Zone	84
4.5.4	Other Photospheric Features	85
4.6	The Chromosphere	86
4.7	The Corona	89
4.8	The Sunspot Cycle and Solar Magnetic Cycle	90
4.9	Line Absorption and Emission	94
4.10	Helioseismology	95
	Challenges	100
	References	101
5	General Properties of the Terrestrial Planets	105
5.1	Overview of Terrestrial Planets	105
5.2	Bulk Properties	106
5.3	Gravitational Potential Fields	108
5.4	Structure of the Earth	114
5.4.1	Seismic Studies	114
5.4.2	The Adams–Williamson Equation	119
5.4.3	Moments of Inertia	124
5.4.4	Models of the Interior	125
5.5	Planetary Surfaces	136
5.5.1	Impacts	136
5.5.2	Observing Planetary Surfaces	140
5.6	Addendum: Properties of Legendre Polynomials and Associated Legendre Functions	142
	Challenges	143
	References	143

6 Planetary Heat Flow and Temperatures	145
6.1 Heat Flow	146
6.1.1 Sources of Internal Heat	146
6.1.2 Methods of Energy Transport	151
6.1.3 Heat Conduction	156
6.1.4 Energy Generation	157
6.1.5 Equilibrium	157
6.1.6 Central Temperature of the Earth	159
6.2 Geotherms	160
6.3 Solar Heating	160
Challenges	166
References	166
7 Rocks and Minerals	169
7.1 Rocks	169
7.1.1 Igneous Rocks	169
7.1.2 Sedimentary Rocks	170
7.1.3 Metamorphic Rocks	170
7.1.4 The Geochemical Cycle	171
7.2 Minerals	171
7.2.1 Crystal Structure	171
7.2.2 Crystal Density	175
7.2.3 Interstitial Holes	175
7.2.4 The Silicate Tetrahedron	177
7.2.5 Mineral Names	177
7.2.6 Composition of the Earth's Crust	178
7.2.7 Oxygen-to-Silicon Ratio in Chemical Symbols	179
7.2.8 Oxygen-to-Metal Ratio and the Classification of Silicate Minerals	179
7.3 Mineral Content of Igneous Rocks	182
7.3.1 Classification of Rocks by Mineral Content	183
7.4 Phase Transitions	183
7.4.1 Phase Transitions of Pyroxene, MgSiO_3	184
7.4.2 Phase Transitions of Olivine, Mg_2SiO_4	189
7.5 Densities of Minerals	190
7.6 Seismic Discontinuities in the Earth's Mantle	190
7.7 Relationship of Phase Diagrams to Seismic Discontinuities	191
7.8 The Effect of Phase Boundaries on Mantle Convection	192
7.9 The Core–Mantle Boundary and the D'' Layer	194
References	196
8 The Moon's Surface, Structure, and Evolution	197
8.1 Surface Composition	197
8.1.1 Lunar Orbiting Spacecraft Detections	198
8.1.2 Landers (1969–1973)	199

8.2	Lunar Surface Characteristics	200
8.2.1	Regolith	202
8.2.2	Breccias	202
8.2.3	Impact Melts	202
8.2.4	Transient Lunar Phenomena (TLPs)	203
8.2.5	Terrae (Highlands)	203
8.2.6	Maria	205
8.2.7	KREEP	207
8.3	Lunar Terranes	208
8.4	Water on the Moon	210
8.5	Internal Structure	212
8.5.1	The Crust	214
8.5.2	The Mantle	215
8.5.3	The Core	217
8.6	Geochemical Evolution	220
8.7	Dynamical History of the Moon	222
	Challenges	228
	References	228
9	Surface Science of the Terrestrial Planets	231
9.1	Mercury	233
9.1.1	Visibility	233
9.1.2	Mercury's Orbit	234
9.1.3	Mercury's Physical Properties	235
9.1.4	Interior Structure	251
9.1.5	Mercury's Origin	254
9.2	Venus	256
9.2.1	Visibility and General Properties	256
9.2.2	Types of Surface	259
9.2.3	Major Geologic Features of Venus	262
9.2.4	Crust	275
9.2.5	Surface Information from the Soviet Landers	275
9.2.6	Pathways for Heat Loss Through Planetary Lithospheres	277
9.2.7	Interior Heat Budget of Venus	278
9.2.8	Heat Loss Through the Lithosphere of Venus	279
9.2.9	Evidence for Current Volcanism on Venus	280
9.3	Mars	281
9.3.1	Visibility and General Properties	281
9.3.2	Martian Geologic Epochs	283
9.3.3	Principal Types of Surface Features	283
9.3.4	The Global Dichotomy: Structure and Origin	296

9.3.5 Evidence of Climate Change on the Martian Surface	299
9.3.6 Mars’ Formation and Interior Structure	306
9.3.7 The Search for Life on Mars	310
Challenges	315
References	315
Index	323

Solar System Astrophysics

Background Science and the Inner Solar System

Milone, E.F.; Wilson, W.J.F.

2014, XVII, 335 p. 180 illus., 21 illus. in color.,

Hardcover

ISBN: 978-1-4614-8847-7
