

Contents

Preface	vii
1 The Four-Color Problem	1
1.1 Humble Beginnings	1
1.2 Kempe, Heawood, and the Chromatic Number	3
1.3 Heawood's Estimate Confirmed	12
1.4 Appel, Haken, and a Computer-Aided Proof	12
A Look Back	17
References and Further Reading	19
2 The Mathematics of Finance	21
2.1 Ancient Mathematics of Finance	21
2.2 Loans and Charging Interest	24
2.3 Compound Interest	26
2.4 Continuously Compounded Interest	28
2.5 Raising Capital: Stocks and Bonds	30
2.6 The Standard Model for Stock Prices	34
2.7 Parameters in the Standard Model	37
2.8 Derivatives	38
2.9 Pricing a Forward	40
2.10 Arbitrage	42
2.11 Call Options	43
2.12 Value of a Call Option at Expiry	45
2.13 Pricing a Call Option Using a Replicating Portfolio: A Single Time Step	45
2.14 Pricing a Call Option Using a Replicating Portfolio: Multiple Time Steps	52

2.15	Black–Scholes Option Pricing	53
	A Look Back	56
	References and Further Reading	57
3	Ramsey Theory	59
3.1	Introduction	59
3.2	The Pigeonhole Principle	60
3.3	The Happy End Problem	65
3.4	Relationship Tables and Ramsey’s Theorem for Pairs	69
3.5	Ramsey’s Theorem in General	73
	A Look Back	76
	References and Further Reading	78
4	Dynamical Systems	81
4.1	Introduction	81
4.2	Creation of the Mandelbrot Set	82
4.2.1	Pseudo-Code to Generate the Mandelbrot Set	86
4.3	Staircase Representation of a One-Dimensional Dynamical System	87
4.3.1	The Use of the Pocket Calculator	89
4.4	A Little Physics	91
4.4.1	Poincaré and the Three-Body Problem	94
4.4.2	Lorenz and Chaos	95
4.5	The Cantor Set as a Fractal	97
4.6	Higher-Dimensional Versions of the Cantor Set	105
4.6.1	The Sierpiński Triangle	105
	A Look Back	107
	References and Further Reading	109
5	The Plateau Problem	111
5.1	Paths That Minimize Length	111
5.2	Surfaces That Minimize Area	113
5.3	Curvature of a Plane Curve	118
5.4	Curvature of a Surface	118
5.5	Curvature of Minimal Surfaces	122
5.6	Plateau’s Observations	124
5.7	Types of Spanning Surfaces	125

5.8	The Enneper–Weierstrass Formula	127
5.8.1	Costa’s Surface	127
5.9	Solutions by Douglas and Radó	128
5.10	Surfaces Beyond Disc Type	129
5.11	Currents	131
5.12	Regularity Theory	132
5.13	Plateau’s Rules	133
	A Look Back	133
	References and Further Reading	134
6	Euclidean and Non-Euclidean Geometries	137
6.1	The Concept of Euclidean Geometry	137
6.2	A Review of the Geometry of Triangles	140
6.3	Some Essential Properties of Euclidean Geometry	145
6.4	What is Non-Euclidean Geometry?	149
6.5	Spherical Geometry	149
6.6	Neutral Geometry	152
6.7	Hyperbolic Geometry	154
6.7.1	The Question of Consistency	155
6.7.2	Models of Hyperbolic Geometry	156
	A Look Back	160
	References and Further Reading	161
7	Special Relativity	163
7.1	Introduction	163
7.2	Principles Underlying Special Relativity	163
7.3	Some Consequences of Special Relativity	164
7.4	Momentum and Energy	171
7.4.1	Vector Quantities	172
7.4.2	Vectors in Relativity	173
7.4.3	Relativistic Momentum	175
7.4.4	Rest Mass	178
	A Look Back	179
	References and Further Reading	181
8	Wavelets in Our World	183
8.1	Introductory Ideas	183
8.2	Fourier’s Ideas	184

8.3	Enter Wavelets	189
8.4	What Are Wavelets Good for?	191
8.5	Key Players in the Wavelet Saga	192
	A Look Back	194
	References and Further Reading	196
9	RSA Encryption	197
9.1	Basics and Background	197
9.2	Preparation for RSA	200
9.2.1	Background Ideas	200
9.2.2	Modular Arithmetic	200
9.2.3	Euler's Theorem	201
9.2.4	Relatively Prime Integers	203
9.3	The RSA System Enunciated	204
9.4	The RSA Encryption System Explicated	207
9.5	Zero Knowledge Proofs: How to Keep a Secret	208
	A Look Back	213
	References and Further Reading	215
10	The P/NP Problem	217
10.1	Introduction	217
10.2	Complexity Theory	219
10.3	Automata	221
10.4	Turing Machines	230
10.5	Examples of Turing Machines	233
10.6	Bigger Calculations	241
10.7	Nondeterministic Turing Machines	243
10.8	$\mathcal{P}$ and $\mathcal{NP}$	249
10.9	NP-Completeness	251
	A Look Back	252
	References and Further Reading	253
11	Primality Testing	255
11.1	Preliminary Concepts	255
11.2	Euclid's Theorem	256
11.3	The Sieve of Eratosthenes	258
11.4	Recognition of Composite Numbers	261
11.5	Speed of Algorithms	263

11.6	Pierre de Fermat	264
11.7	Fermat's Little Theorem	266
11.8	The Strong Pseudoprimality Test and Probabilistic Primality Testing	268
11.9	The AKS Primality Test	271
	A Look Back	273
	References and Further Reading	275
12	The Foundations of Mathematics	277
12.1	The Evolution of the Concept of Proof	277
12.2	Kurt Gödel and the Birth of Uncertainty	280
12.3	Origins of Kurt Gödel	281
12.4	Elements of Formal Logic	285
12.4.1	Definitions of Connectives	288
12.4.2	Logical Syllogisms	294
12.4.3	Quantifiers	296
12.5	Truth and Provability	300
12.6	Cracks in the Edifice	302
12.7	The Gödel Incompleteness Theorem	304
	A Look Back	306
	References and Further Reading	307
13	Fermat's Last Theorem	309
13.1	Introduction	309
13.2	Splitting Square Numbers	311
13.3	Pythagorean Triples: Another Construction	312
13.4	Kummer's Criterion	315
13.5	Fields	317
13.5.1	Complex Numbers	318
13.5.2	Polynomial Equations	320
13.5.3	Finite Fields	321
13.5.4	Polynomials Over Finite Fields	323
13.6	Algebraic Curves	325
13.7	Elliptic Curves	326
13.7.1	Composition	327
13.7.2	Reduction	328
13.8	The Modular Group	330
13.8.1	Inversion	330

13.8.2	Translation	331
13.8.3	Modular Transformations	332
13.8.4	The Congruence Subgroup	332
13.9	The Taniyama–Shimura–Weil Conjecture	332
13.9.1	Frey Curves	333
13.9.2	Wiles’s Proof of Fermat’s Last Theorem	334
	A Look Back	335
	References and Further Reading	337
14	Ricci Flow and the Poincaré Conjecture	339
14.1	Introduction	339
14.2	Thurston’s Geometrization Program	342
14.3	Ricci Flow	348
14.4	Perelman’s Three Papers	351
14.5	Reaction to Perelman’s Work	354
14.6	Final Remarks on the Proof	356
	A Look Back	361
	References and Further Reading	363
	Epilogue	365
	Credits for Illustrations	367
	Index	371

A Mathematical Odyssey

Journey from the Real to the Complex

Krantz, S.G.; Parks, H.R.

2014, XVI, 382 p. 199 illus., 78 illus. in color., Hardcover

ISBN: 978-1-4614-8938-2
