

Contents

| | | |
|----------|--|-----------|
| 1 | Control Systems | 1 |
| 1.1 | Fundamental Assumptions and Scope | 1 |
| 1.2 | Linear Systems | 3 |
| 1.3 | Digital Control Systems | 4 |
| 1.4 | Application Examples | 7 |
| 1.4.1 | Wheeled Robot | 7 |
| 1.4.2 | Generic Airborne Platform | 9 |
| 2 | Review of Signals and Systems | 13 |
| 2.1 | Signals | 13 |
| 2.2 | Systems | 15 |
| 2.3 | Operators in the Discrete-time Domain | 16 |
| 2.3.1 | Shift Operator | 16 |
| 2.3.2 | Delta Operator | 17 |
| 2.4 | Transforms | 18 |
| 2.4.1 | Z Transform and Transfer Function in z | 18 |
| 2.4.2 | Z Transform and q Operator | 19 |
| 2.4.3 | Γ Transform and Transfer Function in γ | 20 |
| 2.4.4 | Γ Transform and Delta Operator | 20 |
| 2.4.5 | Transfer Functions in Complex Variables z and γ | 21 |
| 2.5 | Instantaneous Sampler and Holds | 21 |
| 2.5.1 | Instantaneous sampler | 21 |
| 2.5.2 | Zero-order Hold | 22 |
| 2.5.3 | Generalized Holds | 23 |
| 2.6 | Lifting | 23 |
| 2.6.1 | Continuous-time Lifting | 24 |
| 2.6.2 | Discrete-time Lifting | 24 |
| 2.7 | Dual-rate Generalized Holds and Samplers | 26 |
| 2.7.1 | Dual-rate Generalized Holds | 26 |
| 2.7.2 | Dual-rate Generalized Samplers | 28 |
| 3 | Discretization | 31 |
| 3.1 | Definitions | 31 |
| 3.2 | Numerical Integration and Differentiation | 32 |

| | | |
|----------|---|-----------|
| 3.2.1 | Numerical Integration | 32 |
| 3.2.2 | Approximation of the Derivative | 38 |
| 3.2.3 | Stability | 39 |
| 3.3 | Hold Equivalence | 40 |
| 3.4 | Matching Poles and Zeros | 44 |
| 3.5 | Hold Equivalence and Multivariable Systems | 45 |
| 3.6 | Hold Equivalence and Generalized Holds | 46 |
| 3.7 | Discretization of Nonlinear Systems | 48 |
| 3.7.1 | Incremental Model Approximation | 48 |
| 3.7.2 | Numerical Approximation | 49 |
| 3.7.3 | Discretization of Affine-in-the-input Systems | 49 |
| 4 | Models | 51 |
| 4.1 | Models for Discrete-time Control | 51 |
| 4.1.1 | Systems | 51 |
| 4.1.2 | Discretization Methods and Models | 53 |
| 4.1.3 | Limitations | 54 |
| 4.2 | Single-rate Discrete-time Models | 54 |
| 4.2.1 | Convergence in Time | 54 |
| 4.2.2 | Convergence in Transfer Function | 56 |
| 4.2.3 | Realization and Transfer Function | 56 |
| 4.2.4 | Generalized Holds and Discrete-time Models | 58 |
| 4.3 | Single-rate Sampled-data Models | 61 |
| 4.3.1 | Definitions | 61 |
| 4.3.2 | Conditions for Uniform-in-time Convergence | 62 |
| 4.4 | Dual-rate Sampled-data Models | 69 |
| 4.4.1 | Systems and Equivalences | 70 |
| 4.4.2 | Conditions for Uniform-in-time Convergence | 71 |
| 5 | Global Digital Redesign | 79 |
| 5.1 | Approaches to Control System Design | 79 |
| 5.2 | Discretization and Stability | 80 |
| 5.3 | Optimal Closed-loop Digital Redesign | 84 |
| 5.3.1 | Fast Discretization | 84 |
| 5.3.2 | Dual-rate Generalized Plant Model | 85 |
| 5.3.3 | Solution to Discrete-time H_2 Optimal Control Problem | 86 |
| 5.3.4 | Order Reduction | 88 |
| 5.4 | Plant Input Mapping | 91 |
| 5.4.1 | Basic Principle | 91 |
| 5.4.2 | Continuous-time Closed-loop Transfer Function | 92 |
| 5.4.3 | Closed-loop Discretization | 93 |
| 5.4.4 | Open-loop Discretization | 94 |
| 5.4.5 | Controllers | 94 |
| 5.4.6 | Solution to Diophantine Equation | 95 |
| 5.5 | Generalized Plant Input Mapping | 97 |
| 5.5.1 | Constrained Number of Controllers | 97 |
| 5.5.2 | Constrained Order | 98 |

| | | |
|----------|--|-----|
| 5.6 | PIM for Dual-rate, Two-loop Feedback Control | 101 |
| 6 | Flatness-based Control | 105 |
| 6.1 | FACS Design | 105 |
| 6.1.1 | Nonlinear Differentially Flat System | 105 |
| 6.1.2 | Objectives of FACS | 107 |
| 6.1.3 | Continuous-time Controller | 107 |
| 6.1.4 | Discrete-time Controller | 108 |
| 6.1.5 | State Estimator | 110 |
| 6.1.6 | Compliance with Objective 2 | 110 |
| 6.1.7 | Intersample Behavior | 113 |
| 6.1.8 | Summary of FACS Computations | 114 |
| 6.2 | Wheeled Mobile Robot Subsystems | 119 |
| 6.3 | Continuous-time Models | 121 |
| 6.3.1 | Plant Model | 121 |
| 6.3.2 | Feedback Linearization and Linear Control | 122 |
| 6.3.3 | Wheel Velocity Control | 125 |
| 6.4 | Numerical Simulations | 125 |
| 6.4.1 | Continuous-time Systems | 125 |
| 6.4.2 | Local Digital Redesign of FLLC | 126 |
| 6.4.3 | FACS | 126 |
| 6.4.4 | Reference Trajectory | 127 |
| 6.4.5 | Results | 127 |
| 6.4.6 | Analysis | 129 |
| 7 | Digital Redesign of Autopilots | 135 |
| 7.1 | Guidance and Control | 135 |
| 7.1.1 | Acceleration Autopilot | 136 |
| 7.1.2 | Gain Scheduling | 136 |
| 7.1.3 | Proportional Navigation Guidance | 137 |
| 7.2 | H-infinity Control and Plant Input Mapping | 137 |
| 7.2.1 | Assumptions | 138 |
| 7.2.2 | Continuous-time H-infinity Control | 138 |
| 7.2.3 | Conversion to a Dual-rate Feedback System with PIM | 139 |
| 7.2.4 | Plant Model | 144 |
| 7.2.5 | Controllers | 145 |
| 7.2.6 | Results | 148 |
| 7.2.7 | Analysis | 151 |
| 7.3 | Optimal Closed-loop Digital Redesign | 157 |
| 7.3.1 | Design Process | 157 |
| 7.3.2 | Plant Model | 158 |
| 7.3.3 | Controllers | 158 |
| 7.3.4 | Simulations and Analysis | 160 |

Discrete-Time Control System Design with Applications

Rabbath, C.A.; Léchevin, N.

2014, XVII, 171 p. 105 illus., 20 illus. in color.,

Hardcover

ISBN: 978-1-4614-9289-4
