

Contents

1	Basic Wave Mechanics Concepts	1
1.1	The Meaning of Science	1
1.2	Not Your Grandfather's Physics: Quantum Weirdness	2
1.3	The Job of QM	3
1.3.1	The Premises of QM	4
1.3.2	The Success of QM	5
1.3.3	The Failure of QM	5
1.4	Axioms to Grind: The Foundation of QM	6
1.5	Energy and Momentum Are Special	10
1.6	Complex Numbers	10
1.6.1	Fundamental Properties of Complex Numbers	10
1.6.2	Phasors, Rotation in the Complex Plane, and Negative Frequency	16
1.7	Probability, Density, and Amplitude	18
1.7.1	Probability of Discrete Events	18
1.7.2	Probability Density of Continuous Values	19
1.7.3	Complex (or "Probability") Amplitude	22
1.7.4	Averages vs Expectations	23
1.8	The Origin of Schrödinger's Equation	24
1.8.1	The Wave Equation	24
1.8.2	Energy, the Hamiltonian, and the Wave Equation	25
1.9	The Meaning of the Wave-Function	27
1.9.1	Where Are We, and Where Do We Go From Here?	27
1.9.2	Gross Anatomy of a Wave Function	28
1.10	Operators	31
1.10.1	Linear Operators	34
1.10.2	Operator Algebra	35
1.10.3	Operators: What is the Meaning of This?	37
1.10.4	Commutators	47
1.10.5	External Fields	49
1.11	From Schrödinger to Newton: Deriving $F=ma$	49
1.12	Measurement and Loss of Coherence	51
1.13	Why Do Measurements Produce Eigenvalues?	55
1.14	The Collapse of QM	57

2	Riding the Wave: More on Wave Mechanics.....	61
2.1	Units of Measure	61
2.1.1	Dimensions of Operators	62
2.2	The Dirac Delta Function	63
2.2.1	Units of the Delta Function	64
2.2.2	Integrals of δ -Functions of Functions	65
2.2.3	3D δ -function in Various Coordinates	66
2.3	Dirac Notation	66
2.3.1	Kets and Bras	66
2.3.2	Operators in Dirac Notation	68
2.3.3	Units Revisited	71
2.3.4	And Now, the Confusing Part	71
2.4	Covering Your Bases: Decomposition	73
2.4.1	Countably Infinite Basis Sets	73
2.4.2	Example: Finite Basis Sets	75
2.4.3	Back to Kets and Bras	77
2.4.4	Continuous (or Uncountable) Basis Sets	77
2.4.5	Mental Projection: Projection Operators and Decomposition	78
2.4.6	A Funny Operator	80
2.4.7	Countable or Uncountable Does Not Mean Much	81
2.5	Normalize, Schmormalize	82
2.5.1	Wave-Function Normalization	82
2.5.2	Delta-Function Normalization	83
2.5.3	Box Normalization	86
2.5.4	Funny Normalization of Radial Wave-Functions (and the Like)	87
2.6	Adjointes	90
2.6.1	Continuous Adjoint Operators	91
2.6.2	Evaluating Adjointes	93
2.6.3	Adjoint Summary	95
2.7	The WKB Approximation	95
2.8	Long-Distance Operators	106
2.8.1	Introduction to Generators	107
2.8.2	Parity	110
2.9	Vector Spaces and Hilbert Spaces	110
2.9.1	Vector Space Overview	111
2.9.2	Field of Scalars	112
2.9.3	Group of Vectors	113
2.9.4	Scalar Field + Vector Group + Scalar Multiplication = Vector Space	114
2.9.5	Observations on Vector Spaces	117
3	Introduction to Scattering.....	119
3.1	1D Quantum Scattering	120
3.1.1	1D Scattering: Finite Width Barrier	120

3.1.2	1D Scattering: Step Potential	122
3.2	Introduction to 3D Scattering	123
3.2.1	3D Hard-Target Classical Scattering	124
3.2.2	Soft-Target Classical Scattering	127
3.2.3	Wave Scattering: Electromagnetic and Quantum Waves	128
3.3	3D Quantum Scattering	129
3.3.1	3D Quantum Scattering Overview	129
3.3.2	3D Scattering Off a Target: Schrödinger's Equation	131
3.3.3	When is a Potential "Short Range?"	133
3.3.4	Differential Cross Section from Scattering Amplitude	135
3.3.5	The Born Approximation	136
3.4	Partial Wave Method	142
3.5	The Optical Theorem	152
3.6	Identical Particle Scattering	157
3.7	Scattering Conclusion	158
4	Matrix Mechanics	159
4.1	Finite-Dimensional Kets, Bras, and Inner Products	160
4.2	Finite-Dimensional Linear Operators	161
4.3	Getting to Second Basis: Change of Bases	168
4.3.1	Transforming Vector Components to a New Basis	169
4.3.2	The Transformation Matrix is Unitary	172
4.3.3	Transforming Operators to a New Basis	174
4.4	Density Matrices	175
4.4.1	Development of the Density Matrix	178
4.4.2	Further Properties of Density Matrices	180
4.4.3	Density Matrix Examples	184
4.4.4	Density Matrix Summary	186
5	Angular Momentum	187
5.1	Rotation Notation	187
5.2	Dissection of Orbital Angular Momentum	188
5.2.1	Orbital Angular Momentum as Fluid	188
5.2.2	Spherical Harmonics as Motion	189
5.3	Generating Station: A Different Spin on Angular Momentum	194
5.4	Spin 1/2	201
5.4.1	Spin Kets, Bras, and Inner Products	201
5.4.2	Spinors for Spin-1/2 Particles	202
5.4.3	Climbing the Ladder: Quantization and the Pauli Matrices ...	207
5.4.4	Deriving the Pauli Matrices	210
5.4.5	Matrices, Matrices, Matrices	210
5.5	Coupling Spin and Position	213
5.6	Angular Momentum for Arbitrary j	215
5.7	Addition of Angular Momentum	217

5.7.1	Two Indefinites can Make a Definite	219
5.7.2	Tensor Products	221
5.7.3	Operators on Tensor Products	223
5.7.4	Inner Products of Tensor Products	224
5.7.5	Clebsch-Gordon coefficients	224
5.8	Just a Moment: The Landé g-Factor	229
6	Multiparticle Quantum Mechanics	235
6.1	Introduction	235
6.1.1	Multiparticle Wave-Functions: Distinct Particles	235
6.1.2	Multiparticle Wave-Functions: Identical Particles	236
6.1.3	Multiparticle Schrödinger Equation	237
6.1.4	Multiparticle States with Spin	238
6.1.5	Symmetry of Multiparticle Wave-Functions: Fermions and Bosons	239
6.2	Atoms	241
6.2.1	Forget the Bohr Model	242
6.2.2	Why Spherical Harmonics are not Spherically Symmetric ...	242
6.2.3	Why are l-orbitals Called s, p, d, and f ?	243
6.3	Ground States of Small Atoms and Hund's Rules	243
6.3.1	Introduction to Atomic Electron Structure	244
6.3.2	Hund's Rules: Overview	249
6.3.3	Hund's Rules: Examples and First Principles	251
6.3.4	Why Hund's Rules?	253
6.3.5	Symmetry and Slater Determinants for Subshells	258
6.3.6	Why Does $L = M_L $?	259
6.4	Multiparticle Entanglement	260
6.4.1	Partial Measurements	261
6.4.2	The EPR Paradox (Not)	264
7	Quantum Electromagnetic Radiation	269
7.1	Quantized EM Field: A Failed Attempt at Photons	270
7.2	Photon Number States	271
7.2.1	Aside on Polarization Vectors	273
7.3	Quantized EM Field: The SHO Analogy	273
7.3.1	SHO vs. EM Wave: Similar, but Different	276
7.3.2	The A-field from State and Operator	279
7.4	Quantum Interaction of Radiation and Matter	281
7.4.1	Multiparticle Matter and Photon States	281
7.4.2	\hat{A} in Action	282
7.4.3	Bigger and Better QFTs	285
7.5	Photons Have All Phases, Semiclassical Approximation	285
7.6	Realistic Photons: Multimode Single Photon States	286
7.7	Photons in Other Bases	288
7.8	The Wave-Function of a Photon?	289
7.9	Quasiclassical States	291

7.10	Classical EM Superposition vs. Quantum Superposition: Interference of Distinct Photons?	293
7.11	Don't Be Dense	295
7.12	Perturb Unto Others: FGR	301
8	Desultory Topics in Quantum Mechanics	305
8.1	Short Topics	305
8.1.1	Parity	305
8.1.2	Massive Particle Frequency	305
8.1.3	Uncertainty is not From Measurement Clumsiness	306
8.1.4	Generalized Uncertainty	307
8.1.5	Is ∇^2 the Square or Composition of Anything?	309
8.1.6	The Only Stationary States are Eigenstates of Energy	310
8.1.7	g Whiz	310
8.1.8	Why Are Photons Said to be Massless?	311
8.1.9	The Terrible Electromagnetic Hamiltonian	312
8.2	Current Events: Probability Current and Electric Current	313
8.2.1	General Continuity	313
8.2.2	Failure of the "Standard" Formula	316
8.2.3	The Meaning of Currents	318
8.2.4	Summary of Currents	322
8.3	Simple Harmonic Oscillator	322
8.3.1	Harmonic Oscillator Position PDF: Classical and Quantum	322
8.3.2	Quantum Harmonic Oscillator Zero Point	323
8.3.3	Raising and Lowering: How Did Dirac Do It?	324
8.4	Make No Mistake with a Quantum Eraser	327
8.4.1	Reminder About Two-Particle States	328
8.4.2	The classical and Single-Photon Mach-Zehnder Interferometer	329
8.4.3	The Parametric Down-Converter	330
8.4.4	The Hong-Ou-Mandel Interferometer	331
8.4.5	Preventing ("Erasing") the Interference Pattern	332
8.4.6	More Variations of the Quantum Eraser	334
8.4.7	"Duality" Is Misleading: Mysticism Is not Needed	335
8.4.8	What Is not a Quantum Eraser?	336
	Appendices	337
	Glossary	347
	References	355
	Index	357

Quirky Quantum Concepts

Physical, Conceptual, Geometric, and Pictorial Physics
that Didn't Fit in Your Textbook

Michelsen, E.L.

2014, XIX, 361 p. 72 illus., Softcover

ISBN: 978-1-4614-9304-4
