

Preface

Integration of Functional Oxides with Semiconductors describes the basic physical principles of oxide/semiconductor heteroepitaxy and offers a view of the current state of the field. It shows how this technology enables large-scale integration of oxide electronic and photonic devices and describes possible hybrid semiconductor/oxide systems. The book incorporates both theoretical and experimental advances to explore the epitaxial integration of tuned functional oxides and semiconductors; to identify materials, device, and characterization challenges; and to present the incredible potential in the realization of multifunctional devices and monolithic integration of materials and devices. Intended for a multi-disciplined audience, *Integration of Functional Oxides with Semiconductors* describes processing techniques that enable atomic level control of stoichiometry and structure, and reviews characterization techniques for films, interfaces, and material performance parameters. Fundamental challenges involved in combining covalent and ionic systems, chemical interactions at interfaces, and multi-element materials that are sensitive to atomic level compositional and structural changes are discussed in the context of the latest literature. Magnetic, ferroelectric, and piezoelectric materials and the coupling between them will also be discussed. GaN, SiC, Si, GaAs, and Ge semiconductors are covered within the context of optimizing next-generation device performance for monolithic device processing.

This book would not have been possible without the support and assistance of many people. We would like to thank Kate Ziemer for her help and inspiration in the early stages of the book; Richard Hatch, Hosung Seo, and Chungwei Lin for their help with editing; Hosung Seo, Andy O'Hara, Kurt Fredrickson, and Kristy Kormondy for the artwork; and Jamal Ramdani for a critical reading of Chap. 2.
