1	Background, Basics, and Some IEC Experiments	1
1.1	Introduction	1
1.1.1	Comments About Current Studies	2
1.2	Gridded IEC Devices	3
1.3	IEC Fusion Reactor Issues	5
1.4	IEC History	7
1.4.1	Prior Virtual Electrode Studies	8
1.5	Recent IEC Studies	9
1.6	Some IEC Basics	10
1.6.1	Thorson’s Triple Grid IEC Device	16
1.6.2	Murali’s Triple Grid RF-Based IEC Device	17
1.6.3	The Ring-Shaped Magnetron Ion Source (RS-MIS)-Based IEC Device	19
1.6.4	Miley’s “Ion-Injected” Device	20
1.6.5	Nebel–Barnes POPS Device	21
1.6.6	Murali’s High-Pressure IEC Concept	22
1.6.7	Bussard HEPS (or Polywell) Concept	24
1.6.8	Barnes–Nebel Penning Trap	25
1.7	Summary	26
	References	26
2	Theory of Well Potential Traps in the IEC	31
2.1	Introduction	31
2.2	Ion Velocity Distribution	40
2.3	Conditions for Maximum Thermonuclear Power	41
2.3.1	The Farnsworth “Fusor”	45
2.3.2	Farnsworth’s “Modulation” Concept	48
2.4	The Polywell: A Spherically Convergent Ion Focus Concept	57
2.5	Summary	64
	References	65

3	Gas Discharges in Gridded IECs	67
3.1	Introduction	67
3.2	Types of Gas Discharges	67
3.3	Direct Current Glow Discharge Mechanism	69
3.4	DC Discharges in Linear Two Electrode Geometries at Low Pressure	71
3.4.1	Discharge Characteristics in the IEC	73
3.5	Discharges in the Spherical Geometry Used in an IEC Device	73
3.5.1	Spherical Geometry Studies	74
3.5.2	Breakdown Voltage Characteristics	75
3.5.3	Voltage Versus (pd) Measurements in an IEC	75
3.5.4	Scaling Laws	80
3.6	Cylindrical IECs	80
3.7	Summary	81
	References	82
4	High-Voltage Stalk Design for IECs	83
4.1	Introduction	83
4.2	Various Stalk Designs and Design Considerations	83
4.2.1	Institute of Advanced Energy, Kyoto University, Japan Design	85
4.2.2	Idaho National Environmental Laboratory (INEL) Design	87
4.2.3	University of Illinois at Urbana–Champaign (UIUC) Designs	87
4.2.4	University of Wisconsin (UW), Madison Designs	88
4.3	A Stalk Design Using “Lessons Learned” from Prior Ones	90
4.3.1	Various Types of Damage Caused to High-Voltage Stalks	91
4.3.2	Surface Breakdown	92
4.3.3	Flashover Across Solid Insulators	92
4.3.4	Prebreakdown Conduction Mechanism	92
4.3.5	Characteristics of Gap Prebreakdown Currents	93
4.3.6	Review of Breakdown Basics	95
4.4	High-Voltage Bushing Design	97
4.5	Use of Bushing for Stalk Design	98
4.5.1	Non-condenser Bushing	98
4.5.2	Condenser Bushings	99
4.6	Stress Control in Stalks	99
4.6.1	Dielectric Materials	99
4.7	Mixed Dielectrics	101
4.7.1	Polarization	102
4.7.2	E-Field Profiles	103
4.7.3	Coaxial Cylindrical Fields	104

4.8	Computation of the Optimum Radius Ratio for Cylindrical Geometry	105
4.8.1	Spherical Electric Fields	105
4.9	Mechanical Stress Due to Electrostatic Charge	107
4.9.1	Multistage Stalk Design	108
4.9.2	Hollow Stalk Design	108
4.9.3	Nonconductive Isolated Stalk Design	111
4.10	Summary	112
	References	113
5	IEC Grid Materials and Construction	115
5.1	Introduction	115
5.2	Grid Material Selection	115
5.3	Effect of Thermionic Electrons on the Performance of the IEC Device	117
5.4	Chordwire Diagnostic for Electron Current Studies	118
5.4.1	Studies of Thermionic Emission Effects on the Neutron Production Rate	119
5.5	Study of Effects of Asymmetric Heating of the Cathode Grid	121
5.5.1	Treatment of Uneven Temperature in Emission Equations	125
5.6	Grid Wire Material Selection	126
5.7	Construction of Grids	128
5.7.1	Rapid Prototyping for Grid Construction	129
5.7.2	Using Carbon Nanotubes to Construct Grids	129
5.7.3	Multi-grid Design and Fabrication	132
5.8	Summary	136
	References	137
6	Effect of Grid Geometry on IEC Performance	139
6.1	Introduction	139
6.2	Transformation of Line Source into a Volume Source	143
6.3	Proton/Neutron (P/N) Ratio	144
6.4	Fusion Regimes Inside an IEC Device	146
6.4.1	Grid Rotation Experiments for Potential Well Studies	150
6.4.2	Grid Rotation Experimental Setup	152
6.5	Calculation of Fusion Rate Using a Single Loop Grid	155
6.5.1	Extension of Study to Entire Grid and Microchannel Effects	159
6.5.2	Detector Calibration Factors for Various Source Regimes	164
6.5.3	Calibration Factor for a Converged Core Created by Microchannel Intersection	165
6.5.4	Calibration Factor for Embedded Source	165

6.5.5	Calibration Factor for a Volume Source Dominated by Microchannels	166
6.5.6	Total Calibration Factor	168
6.6	Grid Geometry for Jet Mode Operation	169
6.6.1	Characteristics of the Jet Mode Regime	170
6.6.2	Jet Mode Discharge Characteristics	170
6.6.3	Size Scaling for IEC Jet Mode	172
6.7	Development of a Compact IEC Device	173
6.8	Summary	176
	References	177
7	Space Charge-Limited Flow	181
7.1	Introduction	181
7.2	Space Charge-Limited Flow in a Parallel Plate Vacuum Diode	182
7.3	Child–Langmuir Law for Space Charge-Limited Emission	183
7.3.1	Geometry of a Parallel Infinite Plate Vacuum Diode	183
7.3.2	Derivation of the Child–Langmuir Law	184
7.3.3	Limitations of the Child–Langmuir Derivation	185
7.4	Langmuir Spherical Geometry Problem	186
7.4.1	Langmuir’s Numerical Solution	188
7.4.2	Effect of Grid Radius	189
7.4.3	Analytical Solution of Space Charge-Limited Current	190
7.4.4	Cylindrical System	193
7.4.5	Spherical System	193
7.5	Experimental Observations of Space Charge-Limited Flow in Current IECs	195
7.6	Experimental Observations of Some Effects of Space Charge-Limited Flow	199
7.6.1	Converged Core Condition with Space Charge-Limited Flow	202
7.6.2	Flow Convergence Measurement	203
7.6.3	Core Density Measurements	205
7.7	Summary	206
	References	208
8	Ion and Electron Current Scaling Issues	209
8.1	Introduction	209
8.2	Reaction Regime Issues	210
8.2.1	Multi-grid IEC Concept	212
8.2.2	Low-Pressure Experiments	217
8.2.3	Studies of Energy Loss Mechanisms	219
8.2.4	Secondary Electron Emission	224
8.2.5	Molecular Effects on the Secondary Electron Emission	226

8.3	Impurity Effects on SEE	228
8.3.1	Photoemission Electrons	229
8.3.2	Field Emission	233
8.3.3	Tests of Grid Materials	234
8.4	Summary	235
	References	236
9	Cylindrical and Other IEC Geometries	239
9.1	Introduction	239
9.2	Cylindrical IECs	239
9.3	Electrically Driven IEC Jet Thruster	244
9.4	The Dipole-Assisted IEC (DaIEC)	245
9.4.1	DaIEC Experiments	246
9.5	Microchannel Type IEC Thruster	248
9.6	A Counter-Streaming Beam Linear IEC	249
9.7	Multiple Ambipolar Recirculating Beam Line Experiment (MARBLE)	250
9.7.1	Ion Confinement in MARBLE	250
9.7.2	Potential Applications for MARBLE	255
9.8	Shaban's Magnetic-Assisted IEC	255
9.9	Summary	258
	References	259
10	Various Other IEC Concepts and Experiments	261
10.1	Introduction	261
10.2	Hirsch Ion Gun Injected Experiment	261
10.3	SIGFE Six-Gun Experiment at University of Wisconsin	264
10.4	"Star" Mode with Vane-Type Grids and with Pulsed Operation	267
10.5	Pulsed Operation	268
10.6	Getter Pumping of an IEC Device	271
10.7	Compact IEC Neutron Source for Landmine Detection at Kyoto University	271
10.8	Helicon-Injected IEC for ^3He Experiments at University of Wisconsin	273
10.8.1	University of Wisconsin Helicon Source	274
10.9	The University of Illinois Helicon-IEC Thruster, HIIPER	275
10.9.1	Numerical Simulations for HIIPER	278
10.10	Electron-Injected IEC Concepts	279
10.10.1	Experimental Observation of POPS Oscillations	280
10.10.2	Particle Simulation of POPS Plasma Compression	281
10.10.3	Penning Trap Concept	283
10.11	Summary	286
	References	286

11 IEC Diagnostics	289
11.1 Introduction	289
11.2 Neutron Detectors	289
11.2.1 Polyethylene-Moderated ^3He Gas Filled Neutron Detectors	290
11.2.2 BF_3 Neutron Detectors	290
11.2.3 Typical Detector Electronic Arrangement	290
11.2.4 Operational Regions	291
11.2.5 Comparison of Gas Filled Detectors	292
11.2.6 Example of a ^3He Detector in an IEC Experiment	293
11.2.7 Calibration of Neutron Detectors	293
11.2.8 Comments About Nonlinearity in Detection Rates	294
11.3 Bubble Detectors	296
11.4 Silver Activation Detectors	297
11.5 Solid-State Detectors	297
11.5.1 Energy Required for the Creation of Electron–Hole Pair	299
11.5.2 Energy Calibration of the Proton Spectrum	299
11.5.3 Understanding the Proton Energy Spectrum Recorded with Si Detectors	300
11.5.4 Comments About D– ^3He Fueled IEC Reactions	305
11.6 Noise Levels in Silicon Detectors	308
11.7 Natural Diamond Detectors	308
11.7.1 Electron Noise	309
11.7.2 Calculation of the Proton Deflection Inside the Detector Port	310
11.7.3 Fusion Ion Doppler (FIDO) Diagnostic	311
11.8 Scintillation Detectors	313
11.8.1 Negative Ions in Gridded IEC Devices	314
11.8.2 Magnetic Deflection–Energy Analyzer	315
11.9 Laser-Induced Fluorescence of Well Profiles	318
11.10 Spectroscopic/Langmuir Probe Measurements of Ion Energies	321
11.10.1 Langmuir Probe Measurements	321
11.10.2 Ion Energy Measurements	322
11.11 Diagnostics for an IEC Plasma Jet	325
11.11.1 Gridded Energy Analyzer	326
11.11.2 Faraday Cup Diagnostics	327
11.11.3 Plasma Force Sensor	330
11.12 Summary	331
References	332

12 Potential Applications	335
12.1 Introduction	335
12.2 Neutron/Proton/X-ray Sources	335
12.3 Production of Medical Isotopes	336
12.3.1 Chemical Explosives Detection Using an IEC Device	339
12.3.2 Detection of Highly Enriched Uranium (HEU)	340
12.4 Integrated Interrogation System	343
12.4.1 Design of a Total Integrated Interrogation System for Luggage Inspection	344
12.5 Integrated System Detection Methods	345
12.5.1 Pulsed Power Supply for a Pulsed IEC Neutron Source	346
12.5.2 Detector Array for the Integrated System	348
12.5.3 Fuzzy Logic Analysis System	348
12.5.4 Adaptation to Container Ships	349
12.6 IEC Fusion Space Propulsion Design Studies	349
12.7 Magnetically Channeled Spherical IEC Array (MCSA) Concept	352
12.7.1 Recirculation of Radial Belt Cone Losses	353
12.7.2 Retrapping of Axial-Loss Particles	354
12.8 IEC Electrically Driven Space Thruster, HIIPER	356
12.8.1 Comments About Scale-Up to p-B ¹¹ IEC Space Power Unit/Thruster	358
12.9 IEC-Driven Fusion-Fission Hybrids	358
12.9.1 Possible Initial Use in Low-Power Research Reactors	360
12.9.2 IEC Configuration for the Subcritical Reactor Design	361
12.10 Summary	362
References	363
13 Reactor Confinement Theory and IEC Reactor Visions	367
13.1 Introduction	367
