

Acknowledgements

I am especially grateful to the series editor, Dr. Joseph N. Pelton, for his support, encouragement, and trust during the process of writing this book. His comments and enthusiasm were invaluable to improving the quality of the final manuscript. I would also like to express my gratitude to the publisher, Springer, for accepting this book as part of the series “SpringerBriefs in Space Development.” In particular I would like to thank Maury Solomon and Nora Rawn for their editorial and production guidance.

My appreciation goes to my friends and colleagues at the Department of Geography and Environmental Management at the University of Waterloo. Thanks are due to Andre Roy, Peter Deadman, Jean Andrey, Paul Parker, and Ian McKenzie for their support. I would like to especially acknowledge Dongrong Li, who worked as my Research Assistant, as well as my graduate students at the Applied Geomatics Research Laboratory (AGRL).

I would like to thank the International Space University (ISU), which made it possible to write this book. As one of the most unique educational institutions in the world that promotes 3 “I”s (interdisciplinary, international, and intercultural) learning, I am grateful to be part of this visionary and innovative organization. Special thanks are due in particular to Angie Bukley, Walter Peeters, and the ISU Academic Council.

Finally, I would like to thank my mother and father, Wai-Koon and Geok Yong Tan, who have given me much encouragement and support over the years. This book is dedicated to Tomohisa Oki, my husband and ‘best friend,’ for his kindness, love, and dedication. I am deeply indebted to his unyielding support, especially when it mattered most.

This Springer book is published in collaboration with the International Space University. At its central campus in Strasbourg, France, and at various locations around the world, the ISU provides graduate-level training to the future leaders of the global space community. The university offers a two-month Space Studies Program, a five-week Southern Hemisphere Program, a one-year Executive MBA and a one-year Masters program related to space science, space engineering, systems engineering, space policy and law, business and management, and space and society.

These programs give international graduate students and young space professionals the opportunity to learn while solving complex problems in an intercultural environment. Since its founding in 1987, the International Space University has graduated more than 3,000 students from 100 countries, creating an international network of professionals and leaders. ISU faculty and lecturers from around the world have published hundreds of books and articles on space exploration, applications, science and development.
