

Contents

1	Introduction	1
1.1	Why Phylogenetics and Functional Traits in Ecology?	1
1.2	Why R?	2
1.3	Structure and How to Use This Book?	3
1.4	Setting Working Directories and Package Installation	5
2	Phylogenetic Data in R	9
2.1	Objectives	9
2.2	Loading Phylogenies into R and the Structure of the “Phylo” Class	9
2.3	Plotting Phylogenetic Trees in R	12
2.4	Manipulating and Calculating Additional Information from Phylogenetic Trees in R	15
2.5	Simulating Phylogenies in R	22
2.6	Conclusions	25
2.7	Exercises	25
3	Phylogenetic Diversity	27
3.1	Objectives	27
3.2	Background	27
3.3	“Community” Datasets	29
3.4	Tree-Based Measures of Phylogenetic Diversity	32
3.5	Distance-Based Measures of Phylogenetic Diversity	41
3.5.1	Pairwise Measures	41
3.5.2	Nearest Neighbor Measures	48
3.6	Comparing Metrics	52
3.7	Conclusions	54
3.8	Exercises	55
4	Functional Diversity	57
4.1	Objectives	57
4.2	Background	57

4.3	Quantifying the Functional Composition of Communities Using the Moments of Trait Distributions	58
4.4	Dendrogram-Based Versus Euclidean Distance-Based Measures of Functional Diversity	64
4.4.1	Generating Trait Distance Matrices	65
4.4.2	Generating Trait Dendrograms	68
4.4.3	Pairwise and Nearest Neighbor Measures	70
4.4.4	Ranges and Convex Hulls	76
4.4.5	Other Measures	80
4.5	Comparing Metrics of Functional Diversity	80
4.6	Conclusions	81
4.7	Exercises	83
5	Phylogenetic and Functional Beta Diversity	85
5.1	Objectives	85
5.2	Background	85
5.3	Tree-Based Measures of Phylogenetic Beta Diversity	87
5.3.1	UniFrac	87
5.3.2	Phylogenetic Sorenson's Index	94
5.4	Distance-Based Measures of Phylogenetic and Functional Beta Diversity	95
5.4.1	Pairwise Measures	95
5.4.2	Nearest Neighbor Measures	100
5.5	Other Metrics	104
5.6	Comparing Metrics	105
5.7	Conclusions	108
5.8	Exercises	108
6	Null Models	109
6.1	Objectives	109
6.2	Background	109
6.2.1	Why Use Null Models for Phylogenetic and Functional Analyses?	110
6.2.2	Calculating Standardized Effect Sizes, Quantiles, and <i>P</i> -Values	114
6.3	Classes of Null Models in Phylogenetic and Functional Analyses of Species Assemblages?	116
6.4	Randomizing Community Data Matrices in R	116
6.4.1	Unconstrained Randomizations	117
6.4.2	Constrained Randomizations	118
6.5	Randomizing Phylogenetic Data	120
6.5.1	Unconstrained Randomizations	120
6.5.2	Constrained Randomizations	128
6.6	Randomizing Functional Trait Data	132
6.6.1	Unconstrained Randomizations	133
6.6.2	Constrained Randomizations	134

6.7	Null Models for Phylogenetic and Functional Alpha Diversity	136
6.8	Null Models for Phylogenetic and Functional Beta Diversity	141
6.9	Conclusions.....	145
6.10	Exercises	146
7	Comparative Methods and Phylogenetic Signal	147
7.1	Objectives	147
7.2	Trait Correlations.....	147
7.2.1	Independent Contrasts.....	148
7.2.2	Phylogenetic Generalized Least Squares	150
7.2.3	Phylogenetic Eigenvector Regression.....	151
7.3	Quantifying Phylogenetic Signal.....	154
7.3.1	Mantel Test.....	155
7.3.2	Blomberg's K and Significance Tests	156
7.3.3	Pagel's Lambda	159
7.3.4	Standardized Contrast Variance, Unstandardized Contrast Means, and Randomization Tests	162
7.3.5	Phylogenetic Eigenvectors	165
7.4	Quantifying the Timing and Magnitude of Trait Divergences.....	165
7.5	Conclusions.....	171
7.6	Exercises	171
8	Partitioning the Phylogenetic, Functional, Environmental, and Spatial Components of Community Diversity	173
8.1	Objectives	173
8.2	Background.....	173
8.3	Partitioning Variation in Community Functional Alpha Diversity by the Environment, Space, and the Community Phylogenetic Alpha Diversity	174
8.3.1	Partitioning FD Using Multiple Regression on Distance Matrices.....	175
8.3.2	Partitioning FD Using Principal Coordinates of Neighbor Matrices (PCNM) and Forward Selection	178
8.4	Variance Partitioning of Phylogenetic or Functional Beta Diversity Along Environmental and Spatial Gradients	179
8.4.1	Beta Diversity and Multiple Regression on Distance Matrices.....	180
8.4.2	Partitioning Beta Diversity Using Principal Coordinates of Neighbor Matrices (PCNM) and Forward Selection	181
8.5	Integrating Phylogenetic, Trait, Environmental and Spatial Information to Quantify the Role of Abiotic Filtering During Community Assembly	182
8.6	Conclusions.....	185
8.7	Exercises	187

9 Integrating R with Other Phylogenetic and Functional Trait Analytical Software	189
9.1 Objectives.....	189
9.2 Background: The Development of Eco-Informatics Tools for Phylogenetic- and Functional Trait-Based Ecology.....	189
9.3 Phylocom	190
9.3.1 Quantifying Phylogenetic and Functional Diversity and Dispersion in Phylocom.....	191
9.3.2 Comparative Analyses in Phylocom.....	197
9.3.3 Interfacing R and Phylocom for Null Modeling.....	197
9.4 Conclusions.....	200
9.5 Exercises	201
References	203
Index.....	211
