1	Introduction	1
	References	5
2	Electromagnetic Theory	9
2.1	Electrostatics	9
2.1.1	Preliminary Remarks	9
2.1.2	The Electric Field	10
2.1.3	The Lorentz Law of Force.....	10
2.1.4	Coulomb's Law	11
2.1.5	Charge Conservation	12
2.1.6	Units.....	14
2.1.7	The Field of a Static Charge Distribution	14
2.1.8	Gauss's Theorem	16
2.1.9	The Field of a Dipole	18
2.1.10	The Force and Couple on a Dipole in an Electric Field...	20
2.2	Magnetostatics.....	21
2.2.1	Preliminary Remarks	21
2.2.2	The Biot–Savart Law and the Vector Potential	23
2.2.3	Scalar Magnetic Potential	24
2.2.4	Ampère's Circuital Law	27
2.2.5	Force and Couple on a Dipole in a Magnetic Field	28
2.3	Faraday's Law of Induction	30
2.3.1	Preliminary Remarks	30
2.3.2	Electromotive Force	31
2.3.3	Flux of a Magnetic Field Through a Moving Circuit	31
2.3.4	Faraday's Law	34
2.4	Maxwell's Equations	36
2.4.1	The Full Set of Maxwell's Equations	36
2.4.2	Polarization and Magnetization in Materials	39

2.5	Boundary Conditions.....	43
2.5.1	Boundary Conditions for \mathbf{E} and \mathbf{D}	43
2.5.2	Boundary Conditions for \mathbf{B} and \mathbf{H}	45
	References	46
3	Nonlinear Elasticity Background	47
3.1	Continuum Kinematics.....	47
3.1.1	Deformation of a Solid Continuum	47
3.1.2	Spatial Derivatives of Field Variables	49
3.1.3	The Deformation Gradient	50
3.1.4	Motion of a Continuum	55
3.1.5	Integral Theorems	58
3.1.6	Transport Formulas	60
3.2	Mechanical Balance Equations	61
3.2.1	Mass Conservation	61
3.2.2	Forces and Momenta	61
3.2.3	Euler's Laws of Motion	62
3.2.4	Energy Balance	65
3.3	Constitutive Equations for Hyperelastic Solids	67
3.3.1	Hyperelasticity	67
3.3.2	Objectivity	68
3.3.3	Material Symmetry	70
3.3.4	Incompressible Materials.....	76
3.4	Boundary-Value Problems	81
3.4.1	Extension and Inflation of a Thick-Walled Tube	83
3.4.2	The Azimuthal Shear Problem	86
3.4.3	The Axial Shear Problem	89
	References	90
4	Nonlinear Electroelastic Interactions	91
4.1	Preliminaries.....	91
4.2	Equilibrium and Stress	92
4.3	Energy Balance and Constitutive Laws	96
4.4	Lagrangian Formulations	99
4.4.1	Electrostatic Equations and Boundary Conditions	99
4.4.2	Equilibrium Equation and Traction Boundary Condition.....	101
4.4.3	Constitutive Equations	101
4.4.4	Incompressible Materials.....	104
4.4.5	Material Symmetry Considerations.....	105
4.5	Specialization to Linear Elasticity	108
4.5.1	Relation to Linear Piezoelectricity.....	109
4.5.2	General Linear Theory	111
	References	112

5	Electroelastic Boundary-Value Problems	113
5.1	Governing Equations	113
5.2	Homogeneous Deformations	115
5.2.1	Pure Homogeneous Strain	116
5.2.2	Simple Shear	118
5.3	Non-homogeneous Deformations	120
5.3.1	Extension and Inflation of a Tube	120
5.3.2	Helical Shear of a Circular Cylinder	128
5.3.3	Inflation of a Spherical Shell	132
	References	136
6	Nonlinear Magnetoelastic Interactions	137
6.1	Preliminaries	137
6.2	Equilibrium and Stress	138
6.2.1	Magnetic Forces and Couples	138
6.2.2	Mechanical Equilibrium	142
6.3	Constitutive Equations	144
6.3.1	Eulerian Formulations	144
6.4	Lagrangian Formulations	148
6.4.1	Magnetostatic Equations and Boundary Conditions	148
6.4.2	Equilibrium Equation and Traction Boundary Condition	149
6.4.3	Constitutive Equations	149
6.4.4	Incompressible Materials	152
6.4.5	Material Symmetry Considerations	152
6.5	Linear Magnetoelasticity and Piezomagnetism	154
	References	155
7	Magnetoelastic Boundary-Value Problems	157
7.1	Preliminaries	157
7.2	Governing Equations	158
7.3	Homogeneous Deformations	160
7.3.1	Pure Homogeneous Strain	160
7.3.2	Illustration	162
7.3.3	Simple Shear	164
7.4	Application to Circular Cylindrical Geometry	167
7.4.1	Extension and Inflation of a Tube	168
7.4.2	Helical Shear of a Tube	173
	References	179
8	Variational Formulations in Electroelasticity and Magnetoelasticity	181
8.1	Variational Formulations in Electroelasticity	181
8.1.1	Formulation in Terms of the Electrostatic Scalar Potential	182
8.1.2	Formulation in Terms of the Electrostatic Vector Potential	186

8.2	Variational Formulations in Magnetoelasticity	190
8.2.1	Formulation in Terms of the Magnetostatic Scalar Potential	191
8.2.2	Formulation in Terms of the Magnetostatic Vector Potential	194
	References	196
9	Incremental Equations	199
9.1	Continuum Electrodynamics	199
9.1.1	Maxwell's Equations	200
9.1.2	Equations of Motion	202
9.2	Incremental Equations	203
9.3	Incremental Deformations	206
9.3.1	Incremental Electroelasticity	206
9.3.2	Incremental Magnetoelasticity	217
9.3.3	Incremental Boundary Conditions	218
9.3.4	Constitutive Relations	220
	References	229
10	Electroelastic Stability	231
10.1	Preliminary Remarks	231
10.2	Governing Equations	232
10.2.1	Incremental Formulation Based on Ω	233
10.2.2	Incremental Formulation Based on Ω^*	234
10.3	The Electroelastic Half-Space	234
10.3.1	Exterior Electric Field	236
10.3.2	Incremental Fields and Equations	237
10.3.3	Exterior Equations	240
10.3.4	Boundary Conditions	240
10.3.5	Solution	241
10.3.6	An Electroelastic Neo-Hookean Solid	242
10.4	An Electroelastic Plate	245
10.4.1	Solution	247
10.4.2	Application to the Neo-Hookean Electroelastic Solid	249
10.5	An Electroelastic Plate with Electrodes	251
10.5.1	Incremental Equations	253
10.5.2	Incremental Traction Boundary Conditions	254
10.5.3	Incremental Electric Boundary Conditions	254
	References	258
11	Magnetoelastic Wave Propagation	261
11.1	Preliminaries	261
11.2	The Quasimagnetostatic Approximation	262
11.3	Incremental Homogeneous Plane Waves	264
11.3.1	Isotropic Magnetoelasticity	265

11.3.2	Example: A Prototype Magnetoelastic Solid	266
11.3.3	Two-Dimensional Specialization	267
11.4	Surface Waves	271
11.4.1	The Case $B_1 = 0$	272
11.4.2	The Case $B_2 = 0$	279
11.4.3	Love-Type Surface Waves	282
	References	297
