## Part I Introduction

<b>1</b>	<b>Linear <math>\mathcal{H}_\infty</math> Control of Autonomous Systems</b>	<b>5</b>
1.1	Transfer Functions and Their State-Space Realizations	5
1.2	Hardy Space and $\mathcal{H}_\infty$ Norm	7
1.2.1	Computing the $\mathcal{H}_\infty$ Norm of Proper Transfer Function Matrices	9
1.2.2	Computing the $\mathcal{H}_\infty$ Norm of Strictly Proper Transfer Function Matrices	10
1.3	Optimal and Suboptimal Synthesis	10
1.3.1	Plant Description and Basic Assumptions	11
1.3.2	Problem Statement	12
1.3.3	Problem Solution	13
1.3.4	LMI-Based Solution	15
<b>2</b>	<b>The LMI Approach in an Infinite-Dimensional Setting</b>	<b>23</b>
2.1	Historical Remarks and Notation	23
2.2	The Lyapunov–Krasovskii Method	25
2.3	Exponential Stability in a Hilbert Space	27
2.4	Exponential Stability of a Delay Heat Equation	31
2.5	Exponential Stability of a Delay Wave Equation	36
<b>3</b>	<b>Linear <math>\mathcal{H}_\infty</math> Control of Time-Varying Systems</b>	<b>43</b>
3.1	Preliminaries	43
3.1.1	Strict Bounded Real Lemma in Time-Varying and Periodic Settings	44
3.2	Synthesis of Time-Varying Systems	49
3.3	Synthesis of Periodic Systems	52
<b>4</b>	<b>Nonlinear <math>\mathcal{H}_\infty</math> Control</b>	<b>55</b>
4.1	The $\mathcal{L}_2$ Gain and $\mathcal{H}_\infty$ Gain of a Nonlinear System	55

4.2	Control Objective.....	58
4.3	Isaacs' Equation and State-Space Solution .....	59

## Part II Nonsmooth $\mathcal{H}_\infty$ Control

<b>5</b>	<b>Elements of Nonsmooth Analysis .....</b>	<b>67</b>
5.1	Semicontinuous Functions and Their Proximal Sub- and Superdifferentials .....	67
5.1.1	Proximal Sub- and Supergradients in a Time-Varying Setting .....	68
5.2	Viscosity Solutions of First-Order PDEs .....	69
5.3	Nonsmooth $\mathcal{L}_2$ -Gain Analysis .....	71
5.3.1	Basic Assumptions and Definitions.....	71
5.3.2	Instrumental Lemmas .....	72
5.3.3	Hamilton–Jacobi Inequality and Its Proximal Solutions .....	74
5.3.4	Global Analysis .....	75
5.3.5	Local Analysis .....	76
5.3.6	Periodic and Autonomous Cases.....	79
<b>6</b>	<b>Synthesis of Nonsmooth Systems .....</b>	<b>81</b>
6.1	Synthesis of Time-Varying Systems over Continuous-Time Measurements .....	81
6.1.1	Basic Assumptions and Problem Statement.....	82
6.1.2	Dynamic Nonsmooth Hamilton–Jacobi–Isaacs Inequalities .....	83
6.1.3	Global State-Feedback Design .....	84
6.1.4	Global Output-Feedback Design .....	86
6.1.5	Local State-Space Solution.....	88
6.2	Local Output-Feedback Synthesis of Periodic and Autonomous Systems .....	94
6.2.1	$\mathcal{H}_\infty$ -Design Procedure in Periodic and Time-Invariant Settings .....	96
6.3	Local Output-Feedback Synthesis over Sampled-Data Measurements .....	96
6.3.1	Main Result .....	97
6.3.2	Time Substitution-Based Transformation into the $\mathcal{H}_\infty$ -Control Synthesis via Continuous Measurements.....	98
6.3.3	Proof of the Main Result .....	102
6.3.4	$\mathcal{H}_\infty$ -Design Procedure over Sampled-Data Measurements.....	104

<b>7</b>	<b>LMI-Based <math>\mathcal{H}_\infty</math>-Boundary Control of Nonsmooth Parabolic and Hyperbolic Systems</b>	105
7.1	Boundary Stabilization of a Semilinear Parabolic System	105
7.1.1	Exponential Stability	107
7.1.2	$\mathcal{H}_\infty$ -Boundary Control	109
7.2	Boundary Stabilization of a Semilinear Hyperbolic Equation	112
7.2.1	Exponential Stability	114
7.2.2	$\mathcal{H}_\infty$ -Boundary Control	117

### Part III Benchmark Applications

<b>8</b>	<b>Advanced <math>\mathcal{H}_\infty</math> Synthesis of Fully Actuated Robot Manipulators with Frictional Joints</b>	123
8.1	Scalar Friction Models	124
8.1.1	Static Models	124
8.1.2	Dynamic Models	125
8.2	Problem Statement	126
8.3	Nonsmooth Synthesis via Dynamic Friction Compensation	128
8.4	Discontinuous Synthesis via Static Friction Compensation	132
8.5	Experimental Study	136
8.5.1	Experimental Setup	136
8.5.2	Three-DOF Manipulator Model	138
8.5.3	Experimental Results	139
8.6	Synthesis over Nonlinear Sampled-Data Measurements: A Case Study	144
8.7	Concluding Remarks	147
<b>9</b>	<b>Nonsmooth <math>\mathcal{H}_\infty</math> Synthesis in the Presence of Backlash</b>	151
9.1	Output Regulation of a Servomechanism with Backlash	151
9.1.1	Dead Zone–Based Model of Backlash Phenomenon	152
9.1.2	Problem Statement and Control Synthesis	153
9.1.3	Experimental Study	156
9.2	Output Regulation of a Coal-Fired Boiler/Turbine Unit with Actuator Deadzone	159
9.2.1	Identified Model of a Coal-Fired Boiler/Turbine Unit	159
9.2.2	Problem Statement	161
9.2.3	Nonsmooth $\mathcal{H}_\infty$ Synthesis	164
9.2.4	Simulation Results	165
<b>10</b>	<b><math>\mathcal{H}_\infty</math> Generation of Periodic Motion of Mechanical Systems of One Degree of Underactuation</b>	169
10.1	Virtual Constraint Approach	170
10.1.1	Reparametrization of a Motion	171
10.1.2	Coordinate Transformation	174

10.1.3	Coordinate-Feedback Transformation .....	175
10.1.4	Moving Poincaré Section, Transverse Coordinates, and Transverse Linearization .....	177
10.2	Orbital Synthesis Procedure via $\mathcal{H}_\infty$ -Position Feedback .....	178
10.3	Case Study: A 3-DOF Underactuated Helicopter .....	179
10.3.1	Dynamic Model .....	180
10.3.2	The Motion Planning .....	182
10.3.3	$\mathcal{H}_\infty$ Orbitally Stabilizing Synthesis .....	183
10.3.4	Simulation Results .....	186
<b>11</b>	<b>LMI-Based <math>\mathcal{H}_\infty</math> Synthesis of the Current Profile in Tokamak Plasmas .....</b>	<b>191</b>
11.1	Modeling and Problem Statement .....	191
11.2	Proportional State-Feedback Synthesis .....	195
11.2.1	Disturbance-Free Stabilization .....	196
11.2.2	Disturbance Attenuation .....	199
11.3	Proportional-Integral State-Feedback Synthesis .....	201
11.3.1	Stabilization Under Time-Invariant Disturbances .....	201
11.3.2	$\mathcal{H}_\infty$ Design .....	204
11.4	Simulation Results .....	206
	<b>References .....</b>	<b>211</b>
	<b>Index .....</b>	<b>217</b>

Advanced  $H_\infty$  Control

Towards Nonsmooth Theory and Applications

Orlov, Y.V.; Aguilar, L.T.

2014, XI, 218 p. 43 illus., 12 illus. in color., Hardcover
