1	Nonaqueous Electrolytes: Advances in Lithium Salts	1
	Wesley A. Henderson	
1.1	Introduction.....	1
1.2	Electrolyte Salt Properties.....	5
1.3	Established Salts	7
1.4	Electrolyte Characterization Tools.....	9
1.5	Advanced Salts—Fluoroborates and -Phosphates	19
1.6	Advanced Salts—Perfluoroalkylacetates, -Sulfonates, and -Phosphates	26
1.7	Advanced Salts—Imides, Methides, and Phosphorylimides.....	29
1.8	Advanced Salts—Organoborates, -Phosphates, and -Aluminates.....	36
1.9	Advanced Salts—Other Anions	47
1.10	Adoption Criterion for New Salts	55
1.11	Summary	57
	References.....	58
2	Nonaqueous Electrolytes with Advances in Solvents	93
	Makoto Ue, Yukio Sasaki, Yasutaka Tanaka, and Masayuki Morita	
2.1	General Remarks (Makoto Ue).....	94
2.2	Fluorine-Containing Organic Solvents (Yukio Sasaki).....	100
2.2.1	Introduction.....	100
2.2.2	Fluorinated Lactones.....	100
2.2.3	Fluorinated Linear Carboxylates.....	103
2.2.4	Fluorinated Cyclic Carbonates.....	105
2.2.5	Fluorinated Linear Carbonates.....	108
2.2.6	Fluorinated Monoethers	116
2.2.7	Fluorinated Diethers.....	117

2.2.8	Other Fluorinated Solvents	119
2.2.9	Summary	121
2.3	Boron-Containing Organic Solvents (Yasutaka Tanaka).....	122
2.3.1	Introduction.....	122
2.3.2	Nature of Boron Compounds	123
2.3.3	Boric Esters.....	124
2.3.4	Cyclic Boric Esters	126
2.3.5	Other Boron Compounds	127
2.3.6	Summary	128
2.4	Phosphorous-Containing Organic Solvents (Masayuki Morita)	128
2.4.1	Introduction.....	128
2.4.2	Alkylphosphates and Related Compounds as Flame-Retardant Additives/Co-solvents.....	130
2.4.3	Polymeric Gel Electrolytes Containing Alkylphosphates.....	139
2.4.4	Summary	146
2.5	Sulfur-Containing Organic Solvents (Makoto Ue)	146
2.5.1	Introduction.....	146
2.5.2	Properties of Organo-Sulfur Compounds	146
2.5.3	Electrolyte Formulation and Cell Performance	149
2.5.4	Summary	155
	References.....	156
3	Nonaqueous Electrolytes and Advances in Additives	167
	Koji Abe	
3.1	General Theory	167
3.1.1	Background of This Chapter.....	167
3.1.2	Introduction.....	168
3.1.3	Functional Electrolytes	168
3.1.4	Highly Purified Electrolytes.....	169
3.1.5	Classification of Additives	170
3.2	Additives for Anodes	172
3.2.1	Compounds Containing Unsaturated Carbon–Carbon Bond	172
3.2.2	Carboxylic Acid Anhydrides	175
3.2.3	Oxalates.....	175
3.2.4	Sulfur-Containing Compounds	176
3.2.5	Halogen-Containing Compounds.....	180
3.2.6	Phosphorus-Containing Compounds	181
3.2.7	Nitrogen-Containing Compounds.....	182
3.3	Additives for Cathodes.....	183
3.3.1	Sulfur-Containing Compounds with Active Site Poisoning Function	183

3.3.2	Aromatic Compounds Forming an Electro-Conducting Membrane	185
3.4	Additives for Safety Improvement.....	186
3.4.1	Additives for Overcharge Prevention.....	186
3.4.2	Nonflammable Solvents and Additives	194
3.4.3	Others	194
3.5	Miscellaneous	195
3.5.1	Additives for Wettability Improvement	195
3.5.2	Additives for Corrosion Inhibition.....	196
3.5.3	Lithium Salts.....	197
3.6	Future Prospects.....	199
	References.....	200
4	Recent Advances in Ionic Liquids for Lithium Secondary Batteries	209
	Hajime Matsumoto	
4.1	Introduction.....	209
4.2	Research and Development of Ionic Liquids for Battery Electrolytes During the Past Decade	210
4.2.1	Conventional Ionic Liquids Composed of $[\text{Tf}_2\text{N}]^-$ and $[\text{BF}_4]^-$	210
4.2.2	New Ionic Liquids Composed of New Anions Developed During the Past Decade.....	213
4.3	Application of ILs in Lithium Battery Systems During the Past Decade.....	217
4.3.1	Conventional ILs Composed of $[\text{Tf}_2\text{N}]^-$ and $[\text{BF}_4]^-$	217
4.3.2	New ILs Composed of New Anions	218
4.4	Thermal Stability of ILs.....	219
4.5	Summary	220
	References.....	220
5	Interphases Between Electrolytes and Anodes in Li-Ion Battery	227
	Mengqing Xu, Lidan Xing, and Weishan Li	
5.1	Background.....	227
5.1.1	Introduction: Significance in Understanding of Interphases and Challenges	227
5.1.2	Significance of Interphase in Li-Ion Batteries	228
5.1.3	Symbolic Significance: PC–EC Disparity	229
5.2	State of the History (Before 2005).....	231
5.2.1	2-D vs. 3-D Formation Mechanism	231
5.2.2	Extension from Li Metal	233
5.2.3	Chemical Ingredients	234
5.3	New Insights Achieved Since 2005	238
5.3.1	Chemistry	238
5.3.2	Formation Mechanism	242

5.3.3	Properties of Interphases.....	258
5.3.4	Tailoring a Desired Interphase.....	263
5.3.5	Other Anodes: New Challenges from Alloy Anodes (Si, Sn).....	273
5.4	Summary.....	276
	References.....	277
6	On the Surface Chemistry of Cathode Materials in Li-Ion Batteries.....	283
	Susai Francis Amalraj, Ronit Sharabi, Hadar Sclar, and Doron Aurbach	
6.1	Introduction.....	283
6.2	On the Type of Cathode Reactions and the General Effect of the Nature of Cathode Material on Its Surface Chemistry.....	286
6.3	On the Anodic Stability of the Electrolyte Solutions, the Contribution of the Current Collectors and Carbon Black.....	287
6.4	How to Measure Surface Reactions of Cathode Materials and Relevant Composite Electrodes.....	289
6.4.1	FTIR Spectroscopy.....	289
6.4.2	Raman Spectroscopy.....	289
6.4.3	X-Ray Photoelectron Spectroscopy.....	289
6.4.4	ICP.....	289
6.4.5	Electron Microscopy.....	290
6.4.6	Solid-State NMR Spectroscopy.....	290
6.4.7	Electrochemical Impedance Spectroscopy.....	290
6.5	A General Presentation of Various Surface Chemical Aspects and Their Demonstration.....	291
6.5.1	The Effect of Nano-Size.....	291
6.5.2	On the Surface Chemistry of Li_xMO_y , Lithiated Transition Metal Oxide Electrodes, and LiMPO_4 Olivine Cathodes; Some Examples and Introductory Remarks.....	294
6.6	On the Surface Chemistry of Li_xMO_y -Type Cathodes.....	299
6.6.1	SEI-Like Surface Film Formation on Transition Metal Oxide Spinel Materials.....	299
6.6.2	SEI-Like Surface Film Formation on Transition Metal Oxide Layered Materials.....	302
6.6.3	On Surface Structural Changes (Phase Transformation) in the Course of the First Delithiation of Lithiated Transition Metal Cathodes (First Charging Processes).....	304
6.6.4	The Effect of Additives on the Surface Chemistry of Li_xMO_y Cathode Materials.....	306
6.6.5	Coating the Surface of Li–Ni–Co–Mn–O Cathodes in Order to Improve Electrochemical Performance and Stability.....	307
6.7	On the Surface Chemistry of LiMPO_4 -Type Cathodes.....	308

6.8	On the Surface Chemical Aspects of O ₂ Cathodes	313
6.9	Summary	315
	References	315
7	Tools and Methodologies for the Characterization of Electrode–Electrolyte Interfaces	323
	Jordi Cabana	
7.1	Introduction	323
7.2	Electrical Characterization	324
7.3	Electrochemical Quartz Crystal Microbalance	324
7.4	Techniques of Compositional Analysis	326
	7.4.1 Thermal Extraction	327
	7.4.2 Dissolution	328
	7.4.3 Physical Extraction	328
	7.4.4 Dynamic Analyses	330
7.5	Vibrational Spectroscopy	331
	7.5.1 Infrared (IR) Spectroscopy	331
	7.5.2 Raman Spectroscopy	334
7.6	UV–Visible Techniques	336
	7.6.1 UV–Vis Spectroscopy	336
	7.6.2 Ellipsometry	337
7.7	X-Ray-Based Techniques	339
	7.7.1 X-Ray Photoelectron Spectroscopy	339
	7.7.2 X-Ray Absorption Spectroscopy (XAS)	341
	7.7.3 Grazing Incidence/Exit Spectroscopy and Diffraction	343
	7.7.4 Reflectometry (or Reflectivity)	343
7.8	Neutron-Based Techniques	345
7.9	Nuclear Magnetic Resonance	347
7.10	Microscopy	349
	7.10.1 Scanning Probe Microscopy	349
	7.10.2 Electron Microscopy	351
	7.10.3 Spectromicroscopy	353
7.11	Outlook	354
	References	355
8	Molecular Modeling of Electrolytes	371
	Oleg Borodin	
8.1	Introduction to Molecular Modeling Methodologies	371
8.2	Quantum Chemistry Studies of Electrolyte Oxidation Redox Stability and Reactions	373
	8.2.1 Absolute and Electrochemical Scales of Electrolyte Redox Stability	373
	8.2.2 Calculations of the Electrolyte Oxidation Stability	375
	8.2.3 Oxidation Decomposition Products	379
8.3	Molecular Dynamics Simulations of Bulk Electrolytes	380

8.3.1	Organic Liquid Electrolytes	380
8.3.2	Modeling of Ionic Liquid Electrolytes.....	384
8.3.3	Modeling of SEI Components	386
8.4	MD Simulations of the Electrode–Electrolyte Interfaces	388
8.5	Modeling the SEI–Electrolyte Interface	391
	References.....	395
9	Prediction of Electrolyte and Additive Electrochemical Stabilities....	403
	Johan Scheers and Patrik Johansson	
9.1	Introduction.....	403
9.2	Aim and Approaches	404
9.2.1	The Computational Aim	404
9.2.2	Experimental Data and Verification	405
9.2.3	Computational Approaches.....	407
9.3	Prediction Put in Practice.....	413
9.3.1	Solvents.....	413
9.3.2	Salts.....	426
9.3.3	Additives	430
9.4	Summary and Outlook.....	436
	References.....	439
10	Aprotic Electrolytes in Li–Air Batteries	445
	Kah Chun Lau, Rajeev S. Assary, and Larry A. Curtiss	
10.1	Introduction.....	446
10.2	The Li–O ₂ Couple in Aprotic Electrolytes.....	447
10.3	Overview of Theoretical Methods for Electrolytes.....	449
10.4	Organic Carbonate Solvents: Lessons Learned	450
10.5	Ether-Based Solvents	453
10.6	Conclusions and Future Outlook	461
	References.....	463
	Index.....	467
