

Contents

1	Introduction	1
2	A Short Tutorial on Game Theory	5
2.1	Strategic Games	5
2.1.1	Definition of Strategic Game	5
2.1.2	Nash Equilibrium	6
2.1.3	Dominant Strategy	6
2.2	Mechanism Design	7
3	State of Art on Channel Allocation	9
3.1	Cooperative Channel Allocation	9
3.2	Channel Allocation with Selfish Participants	9
4	Game-Theoretic Channel Allocation in Clique	11
4.1	Optimal Allocation of Fixed Channels	11
4.1.1	Strategic Game Model	12
4.1.2	Achieving Global Optimality	13
4.1.3	Computing Globally Optimal Channel Allocation	15
4.1.4	Evaluation Results	16
4.2	Optimal Allocation of Adjustable Channels	20
4.2.1	Strategic Game Model	20
4.2.2	Existence of Nash Equilibrium	23
4.2.3	Achieving Global Optimality	26
4.2.4	Computing Globally Optimal Channel Allocation	31
4.2.5	Evaluation Results	32
5	Game-Theoretic Channel Allocation in Multi-Hop Wireless Networks	39
5.1	Auction Model	40
5.2	Auction Mechanism for Homogenous Channel Allocation	41
5.2.1	Auction Design with Single-Channel Bids	41
5.2.2	Extension to Multi-Channel Bids	45
5.2.3	Evaluation Results	46

5.3	Auction Mechanism for Adjustable Channel Allocation.....	49
5.3.1	Auction Design	50
5.3.2	Evaluation Results	62
5.4	Auction Mechanism for Heterogeneous Channel Allocation	64
5.4.1	Model of Multi-Unit Combinatorial Channel Auction.....	66
5.4.2	Auction Design	70
5.4.3	Evaluation Results	75
5.5	Privacy Preserving Channel Auction	78
5.5.1	A Generic Strategy-Proof Channel Auction	79
5.5.2	Cryptographic Tools	80
5.5.3	Auction Design	81
5.5.4	Extension to Multi-Channel Bids	88
5.5.5	Evaluation Results	93
6	Summary and Open Problems	97
	References.....	99

Game Theoretic Approaches for Spectrum
Redistribution

Wu, F.

2014, VIII, 103 p. 31 illus., 9 illus. in color., Softcover

ISBN: 978-1-4939-0499-0
