

Contents

- 1 Introduction to Microwave Imaging 1**
 - 1.1 Electromagnetic Imaging 1
 - 1.2 Microwave Imaging Methods 2
 - 1.2.1 Radar Approach..... 2
 - 1.2.2 Microwave Tomography 4
 - 1.3 Qualitative Linear Inversion 6
 - 1.4 Quantitative Nonlinear Inversion..... 6
 - 1.4.1 Forward Solver..... 7
 - 1.4.2 Iterative Approaches Without Using Forward Solver 8
 - 1.4.3 Iterative Approaches Using Forward Solver..... 9
 - 1.5 Deterministic Approaches Based on Local Optimization 9
 - 1.6 Stochastic Approaches Based on Global Optimization 10
 - 1.7 Hybrid Approaches 11
 - 1.8 Summary 11
 - 1.9 Conclusion 13
 - References 14
- 2 Sequential Forward Solver..... 21**
 - 2.1 Maxwell’s Equations..... 21
 - 2.1.1 Ill-Posedness of the Inverse Problem 22
 - 2.1.2 Nonlinearity of the Inverse Scattering Problem 23
 - 2.1.3 Inverse Scattering Problem from Theoretical Point
of View 24
 - 2.2 Iterative Technique 24
 - 2.3 Time Domain Algorithm..... 25
 - 2.3.1 Time Domain Forward Scattering Problem 26
 - 2.4 Debye Model 26
 - 2.5 Fundamentals of FDTD Method (Yee Algorithm) 27
 - 2.6 Frequency-Dependent FDTD..... 32
 - References 36

3	Global Optimization: Differential Evolution, Genetic Algorithms, Particle Swarm, and Hybrid Methods	39
3.1	Global Optimization Methods	39
3.2	Differential Evolution	40
3.2.1	Hybrid Differential Evolution	44
3.2.2	Summary	44
3.3	Genetic Algorithms	44
3.3.1	Hybrid Genetic Algorithms	44
3.3.2	Summary	46
3.4	Particle Swarm Optimization	46
3.4.1	Hybrid Particle Swarm Optimization	51
3.4.2	Example of Microwave Tomography Using PSO and DE	53
3.4.3	Summary	57
	References	58
4	Sequential Optimization: Genetic Algorithm	63
4.1	Genetic Algorithm (GA)	63
4.1.1	Advantage of GA	63
4.1.2	GA Parameters for the Proposed MWT	64
4.1.3	Selection, Crossover, and Mutation	64
4.1.4	Population and Generation Sizes and Rates	65
4.1.5	Real-Coded GA	66
4.1.6	Binary-Coded GA	67
4.1.7	BGA with Knowledge About the Number of Scatterers	69
4.2	Fitness Function	70
4.2.1	Multi-view/Multi-illumination	71
4.2.2	Multifrequency	71
4.3	Dependent Regularization	72
4.4	GA-Based Inverse Solver	73
4.4.1	The GA Inversion Procedure	74
4.4.2	Step I. Define Parameters	75
4.4.3	Step II: Representation Scheme	75
4.4.4	Step III. Initialization	75
4.4.5	Step IV. Calculating the Fitness Function	75
4.4.6	Step V. Saving the Fitness Values and Chromosomes	75
4.4.7	Step VI. Selection, Evolution, and Mutation	76
4.4.8	Step VII. Repeat the Procedure	76
4.4.9	Example of GA Process	76
4.5	Preliminary Validation	77
4.5.1	I. Reconstruction Algorithm Using BGA	77
4.5.2	Single Scatterer	78
4.5.3	Multiple Scatterers	80
4.5.4	Dispersive Separated Scatterers	80
4.5.5	Dispersive Multiple Adjacent Scatterers	82
