

Contents

Preface	vii
Acknowledgements	ix
Notations and Basic Definitions	xiii
1 Liouville's Theorem	1
2 Hermite's Theorem	7
3 Lindemann's Theorem	11
4 The Lindemann–Weierstrass Theorem	15
5 The Maximum Modulus Principle and Its Applications	19
6 Siegel's Lemma	23
7 The Six Exponentials Theorem	27
8 Estimates for Derivatives	31
9 The Schneider–Lang Theorem	35
10 Elliptic Functions	39
11 Transcendental Values of Elliptic Functions	49
12 Periods and Quasiperiods	55
13 Transcendental Values of Some Elliptic Integrals	59
14 The Modular Invariant	65
15 Transcendental Values of the j -Function	75

16 More Elliptic Integrals	79
17 Transcendental Values of Eisenstein Series	83
18 Elliptic Integrals and Hypergeometric Series	89
19 Baker's Theorem	95
20 Some Applications of Baker's Theorem	101
21 Schanuel's Conjecture	111
22 Transcendental Values of Some Dirichlet Series	123
23 The Baker–Birch–Wirsing Theorem	131
24 Transcendence of Some Infinite Series	137
25 Linear Independence of Values of Dirichlet L -Functions	153
26 Transcendence of Values of Class Group L -Functions	159
27 Transcendence of Values of Modular Forms	179
28 Periods, Multiple Zeta Functions and $\zeta(3)$	185
Bibliography	205
Index	215
