

Contents

- 1 Introduction** 1
 - 1.1 Background to the Book..... 1
 - 1.2 Book Website 4
 - 1.3 Related Books..... 4
 - 1.4 Roadmap to the Book 5

- 2 Matrix Models as Building Blocks for Population Dynamics**..... 7
 - 2.1 Using Matrices to Represent Processes Within a Single Population..... 8
 - 2.1.1 Survival 9
 - 2.1.2 Age Incrementation 10
 - 2.1.3 Growth 11
 - 2.1.4 Birth..... 12
 - 2.1.5 Sex Assignment 14
 - 2.2 Models Within Models 15
 - 2.2.1 Modelling Processes Through Covariates..... 15
 - 2.2.2 Processes as Random Effects 16
 - 2.3 Leslie Matrices and Lefkovitch Matrices..... 17
 - 2.4 Using Matrices to Represent Processes of Multiple Populations.... 21
 - 2.4.1 Modelling Genotypes 22
 - 2.4.2 Modelling Metapopulations..... 24
 - 2.4.3 Multi-Species Models 27
 - 2.5 Beyond Matrix Models 28
 - 2.6 Observation Matrices 29
 - 2.7 Defining a Population Dynamics Model..... 31
 - 2.7.1 Coho Salmon 31
 - 2.7.2 A Deer Metapopulation 34

- 3 State-Space Models** 39
 - 3.1 State-Space Models..... 43
 - 3.2 Examples of State-Space Models 45
 - 3.2.1 Simplified Salmon Example 45

3.2.2	BRS Model	46
3.2.3	Coho Salmon	48
3.2.4	Deer Metapopulation	49
4	Fitting State-Space Models	51
4.1	Introduction	51
4.2	An Ecological Perspective on Inference for SSMs.....	52
4.2.1	Knowing the Past and Present States	52
4.2.2	Explaining the Past and Present, and Predicting the Future	53
4.2.3	Remarks.....	54
4.3	A Statistical Perspective on Inference for SSMs	55
4.3.1	Inference as Integration	55
4.3.2	Bayesian Versus Classical Inference for SSMs	57
4.4	Classical Statistical Procedures for Fitting SSMs	63
4.4.1	The Kalman Filter	63
4.4.2	Extensions to NDLMs and the Kalman Filter.....	66
4.4.3	Numerical Procedures.....	67
4.5	Monte Carlo Simulation Procedures.....	68
4.5.1	Markov Chain Monte Carlo.....	68
4.5.2	BUGS Project Software.....	71
4.5.3	Fitting the Simplified Coho Salmon SSM with WinBUGS.....	74
4.5.4	Fitting the BRS SSM with WinBUGS	76
4.5.5	Sequential Importance Sampling	77
4.6	Selecting a Fitting Procedure.....	80
5	Model Formulation and Evaluation	83
5.1	Model Formulation	83
5.2	Model Formulation: Parameter Redundancy	86
5.2.1	Concepts	87
5.2.2	Derivative Matrix and Symbolic Rank	88
5.2.3	General Results	91
5.2.4	Missing Data, Exhaustive Summaries and Reparameterization	92
5.2.5	Numerical Methods and Near-Redundancy	93
5.2.6	Bayesian Methods	94
5.3	Parameter Redundancy in State-Space Models	95
5.3.1	Example 3: BRS Matrix Model Example	95
5.3.2	Using the Exhaustive Summary	96
5.3.3	Example 3 Revisited	96
5.3.4	Example 4: BAMS Matrix Model Example.....	97
5.3.5	Variance Components, Non-linear Terms and Reparameterization	98

5.4	Model Evaluation: Model Selection	98
5.4.1	Classical Methods	99
5.4.2	Bayesian Methods	103
5.5	Model Evaluation: Model Averaging	110
5.5.1	Classical Approach	111
5.5.2	Bayesian Approach	111
5.5.3	Important Comments	112
5.6	Model Evaluation: Diagnostics	113
5.6.1	Diagnostics in a Simple Linear Model Setting	114
5.6.2	Unique Aspects of SSMs	117
5.6.3	Innovations and P Scores	118
5.6.4	Bayesian p -Values	119
5.6.5	Cross-Validation	121
6	Modelling Population Dynamics Using Closed-Population Abundance Estimates	123
6.1	Introduction	123
6.1.1	Linking Closed-Population Methods in a State-Space Model Framework	124
6.1.2	A Brief Overview of Closed-Population Methods	125
6.2	Observation Models	127
6.2.1	Plot Sampling	127
6.2.2	Distance Sampling	128
6.2.3	Removal Method	130
6.2.4	Mark-Recapture Method	130
6.2.5	Summary	131
6.3	State Process Models	132
6.3.1	Empirical Smoothing	132
6.3.2	Population Dynamics Models	133
6.4	Population Dynamics Model Examples	134
6.4.1	Wildebeest	134
6.4.2	Gray Whales	138
6.5	Discussion	144
7	Estimating Survival Probabilities from Mark-Re-Encounter Data	147
7.1	Modelling Survival	148
7.1.1	Ring-Recovery Data	148
7.1.2	Capture-Recapture Data	149
7.1.3	Models for Life-History Data	151
7.2	Formulation as State-Space Models	153
7.2.1	Capture-Recapture Data	154
7.2.2	Multi-State Capture-Recapture Models	155
7.2.3	Ring-Recovery Data	156
7.2.4	Extensions	157
7.3	Discussion and Additional Work	157

8	Estimating Abundance from Mark-Recapture Data	159
8.1	Conventional Mark-Recapture Models for Open Populations	160
8.1.1	A Likelihood Formulation	160
8.1.2	Modelling Births	161
8.2	State-Space Formulations	162
8.2.1	The Unconditional Approach	163
8.2.2	The Conditional Approach	165
8.3	A Simple Example	165
8.4	Discussion	168
9	Integrated Population Modelling	169
9.1	Introduction	169
9.2	Integrated Modelling within an SSM Framework	171
9.3	Integrated Modelling with Connected Likelihoods	173
9.3.1	Data, Models and Integrated Modelling	173
9.3.2	Results for Lapwing Example	180
9.4	Facilitating Connected Likelihood Modelling	184
9.4.1	Normal Approximation	184
9.4.2	Results	185
9.5	Technical Issues for Classical Analysis	187
9.5.1	Kalman Filter Initialization	187
9.5.2	Lack of Independence	188
9.5.3	Heterogeneity in the State-Space Model	189
9.6	From Modelling an Index to Multi-Sites: Additional Complexity	189
9.6.1	Accounting for Different Habitats	189
9.6.2	Modelling Individual Site Data	190
9.6.3	Multi-Site and Multi-State Modelling	191
9.7	Additional Aspects of IPM	191
9.7.1	Conditional Gaussian Modelling	191
9.7.2	Goodness of Fit	192
9.7.3	Bayesian Methods	193
9.7.4	Model Selection	194
9.7.5	Integrated Modelling in Fisheries Research	194
10	Concluding Remarks	197
	References	201
	Index	213

Modelling Population Dynamics

Model Formulation, Fitting and Assessment using
State-Space Methods

Newman, K.; Buckland, S.T.; Morgan, B.; King, R.;
Borchers, D.L.; Cole, D.; Besbeas, P.; Gimenez, O.;
Thomas, L.

2014, XII, 215 p. 38 illus., 21 illus. in color., Hardcover

ISBN: 978-1-4939-0976-6
