|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>On Some Functional Equations</b> .....                                                                                              | 1   |
| Marcin Adam, Stefan Czerwik and Krzysztof Król                                                                                         |     |
| <b>Remarks on Stability of the Equation of Homomorphism for Square Symmetric Groupoids</b> .....                                       | 37  |
| Anna Bahyrycz and Janusz Brzdęk                                                                                                        |     |
| <b>On Stability of the Linear and Polynomial Functional Equations in Single Variable</b> .....                                         | 59  |
| Janusz Brzdęk and Magdalena Piszczek                                                                                                   |     |
| <b>Selections of Set-valued Maps Satisfying Some Inclusions and the Hyers–Ulam Stability</b> .....                                     | 83  |
| Janusz Brzdęk and Magdalena Piszczek                                                                                                   |     |
| <b>Generalized Ulam–Hyers Stability Results: A Fixed Point Approach</b> ....                                                           | 101 |
| Liviu Cădariu                                                                                                                          |     |
| <b>On a Weak Version of Hyers–Ulam Stability Theorem in Restricted Domains</b> .....                                                   | 113 |
| Jaeyoung Chung and Jeongwook Chang                                                                                                     |     |
| <b>On the Stability of Drygas Functional Equation on Amenable Semigroups</b> .....                                                     | 135 |
| Elhoucien Elqorachi, Youssef Manar and Themistocles M. Rassias                                                                         |     |
| <b>Stability of Quadratic and Drygas Functional Equations, with an Application for Solving an Alternative Quadratic Equation</b> ..... | 155 |
| Gian Luigi Forti                                                                                                                       |     |
| <b>A Functional Equation Having Monomials and Its Stability</b> .....                                                                  | 181 |
| M. E. Gordji, H. Khodaei and Themistocles M. Rassias                                                                                   |     |

|                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------|-----|
| <b>Some Functional Equations Related to the Characterizations of Information Measures and Their Stability</b> ..... | 199 |
| Eszter Gselmann and Gyula Maksa                                                                                     |     |
| <b>Approximate Cauchy–Jensen Type Mappings in Quasi-<math>\beta</math>-Normed Spaces</b> .....                      | 243 |
| Hark-Mahn Kim, Kil-Woung Jun and Eunyoung Son                                                                       |     |
| <b>An AQCQ-Functional Equation in Matrix Paranormed Spaces</b> .....                                                | 255 |
| Jung Rye Lee, Choonkil Park, Themistocles M. Rassias and Dong Yun Shin                                              |     |
| <b>On the Generalized Hyers–Ulam Stability of the Pexider Equation on Restricted Domains</b> .....                  | 279 |
| Youssef Manar, Elhoucien Elqorachi and Themistocles M. Rassias                                                      |     |
| <b>Hyers-Ulam Stability of Some Differential Equations and Differential Operators</b> .....                         | 301 |
| Dorian Popa and Ioan Raşa                                                                                           |     |
| <b>Results and Problems in Ulam Stability of Operatorial Equations and Inclusions</b> .....                         | 323 |
| Ioan A. Rus                                                                                                         |     |
| <b>Superstability of Generalized Module Left Higher Derivations on a Multi-Banach Module</b> .....                  | 353 |
| T. L. Shateri and Z. Afshari                                                                                        |     |
| <b>D’Alembert’s Functional Equation and Superstability Problem in Hypergroups</b> .....                             | 367 |
| D. Zeglami, A. Roukbi and Themistocles M. Rassias                                                                   |     |

Handbook of Functional Equations

Stability Theory

Rassias, T.M. (Ed.)

2014, X, 396 p., Hardcover

ISBN: 978-1-4939-1285-8
