

Contents

1 Basic Cancer Biology	1
1.1 Overview of Cancer	1
1.2 Hallmarks of Cancer	3
1.2.1 Sustained Proliferative Signaling.....	3
1.2.2 Evasion of Growth Suppressors.....	4
1.2.3 Resisting Cell Death	4
1.2.4 Enabling Replicative Immortality.....	4
1.2.5 Activation of Invasion and Metastasis	5
1.2.6 Induction of Angiogenesis	5
1.2.7 Evasion of Immune Destruction	5
1.2.8 Reprogramming Energy Metabolism.....	6
1.2.9 Other Considerations	6
1.3 Proto-oncogenes, Oncogenes and Tumor Suppressor Genes.....	6
1.3.1 The Rous Sarcoma Virus.....	7
1.3.2 Proto-oncogenes and Oncogenes	7
1.3.3 Conversion of Proto-oncogenes to Oncogenes	8
1.3.4 Tumor Suppressor Genes	8
1.4 Emerging Results on Cancer Genomes, Tumor Heterogeneity and Cancer Evolution.....	10
1.4.1 What Is Being Learned?	10
1.4.2 Driver and Passenger Mutations	11
1.4.3 Major Findings.....	12
1.4.4 Metastasis	12
1.4.5 Cancer Heterogeneity	12
1.5 An Early Sequential Model of Cancer Development.....	13
1.6 Epigenetics and Cancer.....	14
1.7 Cancer Cell Metabolism	15
1.7.1 Meeting the Energetic Requirement of Cells.....	15
1.7.2 Glucose Metabolism	16
1.7.3 The Warburg Effect and Other Metabolic Alterations in Cancer	20

1.8	Emerging Roles of Hypoxia, Inflammation and Reactive Oxygen Species in Cancer	25
1.9	Overcoming Apoptosis.....	28
1.10	Contributions of the Extracellular Matrix and Stroma to Cancer.....	30
1.11	Challenging Questions in Classifying and Diagnosing Cancer	33
1.12	Concluding Remarks.....	35
	References.....	35
2	<i>Omic</i> Data, Information Derivable and Computational Needs.....	41
2.1	Genomic Sequence Data	42
2.2	Epigenomic Data.....	45
2.3	Transcriptomic Data.....	47
2.3.1	Data Clustering	50
2.3.2	Bi-clustering Analysis.....	52
2.3.3	Pathway (or Gene Set) Enrichment Analysis.....	53
2.4	Metabolomic Data.....	56
2.5	Patient Data	58
2.6	A Case Study of Integrative <i>Omic</i> Data Analyses.....	59
2.7	Concluding Remarks.....	60
	References	61
3	Cancer Classification and Molecular Signature Identification.....	65
3.1	Cancer Types, Grades and Stages	66
3.2	Computational Cancer Typing, Staging and Grading Through Data Classification	68
3.2.1	Cancer Typing.....	68
3.2.2	Cancer Staging.....	72
3.2.3	Cancer Grading.....	76
3.3	Discovering (Sub)Types, (Sub)Stages and (Sub)Grades Through Data Clustering	77
3.4	Challenging Issues	81
3.4.1	Identification of Pathway-Level <i>Versus</i> Gene-Level Signatures.....	81
3.4.2	Close Collaboration Between Data Analysts and Pathologists May Be Essential.....	82
3.4.3	Capturing Complex Relationships Among Gene-Expression Patterns	82
3.5	Concluding Remarks.....	82
	Appendix	83
	References	85
4	Understanding Cancer at the Genomic Level	89
4.1	Basic Information Derived from Cancer Genomes.....	90
4.2	General Information Learned from Cancer Genome Data	92
4.2.1	Lung Cancer Genomes	92
4.2.2	Colorectal Cancer Genomes	94

4.2.3	Gastric Cancer Genomes	95
4.2.4	Leukemia Genomes	96
4.3	Driver Mutations Considered at a Pathway Level: Case Studies	97
4.3.1	Cell Differentiation	98
4.3.2	Cell Survival	98
4.3.3	Genome Maintenance	99
4.4	Information (Potentially) Derivable from Mutation Data of Cancer Genomes.....	99
4.5	Limitations of Cell Line-Based Studies: A Prelude to Microenvironments Driving Carcinogenesis	108
4.6	Concluding Remarks.....	110
	References	110
5	Elucidation of Cancer Drivers Through Comparative Omic Data Analyses	113
5.1	Two Distinct Schools of Thoughts About Cancer Drivers	114
5.1.1	Cancer as a Metabolic Disease Related to Reprogrammed Energy Metabolism.....	114
5.1.2	Cancer as a Genomic Disease	115
5.2	A Driver Model Based on APC-Gene Mutations in Colorectal Cancer	117
5.3	Warburg's Thesis: Reprogrammed Energy Metabolism as a Cancer Driver.....	119
5.4	Cell Proliferation as a Way of Survival: Our Driver Model.....	125
5.4.1	ATP Demand <i>Versus</i> Supply	126
5.4.2	A Regression Model of ATP-Consumption Reduction <i>Versus</i> Reduced Expression Levels of Relevant Genes	127
5.4.3	A Driver Model	129
5.5	Roles Played by Genetic Mutations in Tumorigenesis	132
5.5.1	Genetic Mutations Related to Hereditary Cancers	132
5.5.2	Genetic Mutations in Sporadic Cancers	135
5.6	Exogenous Factors and Cancer	136
5.6.1	Microbial Infections.....	136
5.6.2	HBV, HCV and Hepatocellular Carcinoma	137
5.6.3	Human Papilloma <i>Virus</i> (HPV) and Cervical Cancer.....	137
5.6.4	<i>H. pylori</i> and Gastric Cancer	138
5.6.5	Radiation-Induced Cancer	139
5.7	Concluding Remarks.....	139
	Appendix	140
	References	141
6	Hyaluronic Acid: A Key Facilitator of Cancer Evolution	149
6.1	Hyaluronic Acid and Its Physiological Functions.....	150
6.1.1	Hyaluronic Acid Synthesis and Its Regulation	150
6.1.2	Functions of Hyaluronic Acid.....	152
6.1.3	Hyaluronic Acid Fragments as Signaling Molecules.....	154

6.2	Hyaluronic Acid: Its Links with Cancer Initiation and Development	155
6.2.1	Inflammatory Signaling	155
6.2.2	Cell Survival Signaling	156
6.2.3	Mediating the Cell Cycle	157
6.2.4	Insensitivity to Anti-growth Signals	157
6.2.5	Cell Proliferation and Anchorage-Independent Growth	158
6.2.6	Tumor Angiogenesis	159
6.2.7	Invasiveness, EMT and Metastasis	159
6.2.8	Evasion of Immune Detection	160
6.3	A Model for Hyaluronic Acid-Facilitated Cancer Initiation and Development	161
6.3.1	Activation of Synthesis, Export and Degradation of Hyaluronic Acid	162
6.3.2	Hyaluronic Acid-Facilitated Tissue Development	164
6.3.3	General Roles of Hyaluronic Acid During Tumorigenesis	167
6.4	Bioinformatics Opportunities and Challenges	168
6.4.1	Completing the Details of the Model Based on Available Transcriptomic Data.....	169
6.4.2	Validation, Refinement and Expansion of the Model	169
6.4.3	Application of the Model	170
6.5	Concluding Remarks.....	171
	References.....	171
7	Multiple Routes for Survival: Understanding How Cancer Evades Apoptosis.....	179
7.1	The Basic Biology of Apoptosis	180
7.1.1	The Apoptosis Execution System	180
7.1.2	The Signaling and Regulatory System of Apoptosis	182
7.1.3	The P53 Network	185
7.2	Different Ways to Evade Apoptosis by Cancer	188
7.2.1	Growth and Apoptosis	188
7.2.2	Cell Cycle and Apoptosis.....	189
7.2.3	Cancer-Associated Stresses and Apoptosis.....	189
7.2.4	Survival Pathways and Apoptosis	193
7.3	Cancer Characterization Through Resolution of How They Avoid Apoptosis.....	195
7.4	Concluding Remarks.....	198
