

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Background of Univariate and Bivariate Cross-Sectional Multinomial Models	1
1.2	Background of Univariate and Bivariate Longitudinal Multinomial Models	3
	References	6
<b>2</b>	<b>Overview of Regression Models for Cross-Sectional Univariate Categorical Data</b>	<b>7</b>
2.1	Covariate Free Basic Univariate Multinomial Fixed Effect Models	7
2.1.1	Basic Properties of the Multinomial Distribution (2.4)	9
2.1.2	Inference for Proportion $\pi_j (j = 1, \dots, J - 1)$	12
2.1.3	Inference for Category Effects $\beta_{j0}, j = 1, \dots, J - 1$ , with $\beta_{J0} = 0$	15
2.1.4	Likelihood Inference for Categorical Effects $\beta_{j0}, j = 1, \dots, J - 1$ with $\beta_{J0} = -\sum_{j=1}^{J-1} \beta_{j0}$ Using Regression Form	19
2.2	Univariate Multinomial Regression Model	20
2.2.1	Individual History Based Fixed Regression Effects Model	20
2.2.2	Multinomial Likelihood Models Involving One Covariate with $L = p + 1$ Nominal Levels	25
2.2.3	Multinomial Likelihood Models with $L = (p+1)(q+1)$ Nominal Levels for Two Covariates with Interactions	53
2.3	Cumulative Logits Model for Univariate Ordinal Categorical Data	63
2.3.1	Cumulative Logits Model Involving One Covariate with $L = p + 1$ Levels	64
	References	87

<b>3</b>	<b>Regression Models For Univariate Longitudinal Stationary Categorical Data</b>	89
3.1	Model Background	89
3.1.1	Non-stationary Multinomial Models	90
3.1.2	Stationary Multinomial Models	91
3.1.3	More Simpler Stationary Multinomial Models: Covariates Free (Non-regression) Case	92
3.2	Covariate Free Basic Univariate Longitudinal Binary Models	93
3.2.1	Auto-correlation Class Based Stationary Binary Model and Estimation of Parameters	93
3.2.2	Stationary Binary AR(1) Type Model and Estimation of Parameters	100
3.2.3	Stationary Binary EQC Model and Estimation of Parameters	107
3.2.4	Binary Dynamic Logit Model and Estimation of Parameters	114
3.3	Univariate Longitudinal Stationary Binary Fixed Effect Regression Models	120
3.3.1	LDCP Model Involving Covariates and Estimation of Parameters	122
3.3.2	BDL Regression Model and Estimation of Parameters	137
3.4	Covariate Free Basic Univariate Longitudinal Multinomial Models	144
3.4.1	Linear Dynamic Conditional Multinomial Probability Models	145
3.4.2	MDL Model	167
3.5	Univariate Longitudinal Stationary Multinomial Fixed Effect Regression Models	179
3.5.1	Covariates Based Linear Dynamic Conditional Multinomial Probability Models	180
3.5.2	Covariates Based Multinomial Dynamic Logit Models	193
3.6	Cumulative Logits Model for Univariate Ordinal Longitudinal Data With One Covariate	209
3.6.1	LDCP Model with Cut Points $g$ at Time $t - 1$ and $j$ at Time $t$	213
3.6.2	MDL Model with Cut Points $g$ at Time $t - 1$ and $j$ at Time $t$	232
