

Contents

1	Background	1
1.1	Some Preliminary Definitions	1
1.1.1	Manifolds	2
1.1.2	Cell Complexes	3
1.1.3	Regular Grids and Simplicial Complexes	4
1.1.4	Primal and Dual Complex	6
1.2	Models for Scalar Fields	7
1.3	Morse Theory and Morse Complexes	9
1.4	Watershed Transform in the Smooth Case	13
1.5	Piecewise-Linear Morse Theory	14
1.5.1	Critical Points in a Piecewise-Linear Model	14
1.5.2	Quasi-Morse-Smale Complexes	16
1.6	Forman Theory	17
1.7	Summary	21
	References	22
2	Morphology Computation Algorithms: Generalities	25
2.1	Classification of Morphology Computation Algorithms	26
2.1.1	Input Dimension, Format and Properties	26
2.1.2	Output Information and Its Format	26
2.1.3	Algorithmic Approach	27
2.2	Detection of Critical Points	29
2.2.1	Detecting Critical Points in a Simplicial Model	29
2.2.2	Detecting Critical Points in a Regular Grid	32
2.3	Handling the Domain Boundary	33
2.4	Presence of Plateaus	33
	References	35
3	Boundary-Based and Region-Growing Algorithms	37
3.1	Boundary-Based Algorithms	38
3.1.1	Boundary-Based Methods on Simplicial Models	38
3.1.2	Analysis and Comparisons	45

3.1.3	Boundary-Based Methods on Regular Grids	48
3.2	Region-Growing Algorithms	50
3.2.1	The Two Algorithms by Danovaro et al.	51
3.2.2	The Algorithm by Magillo et al.	53
3.2.3	The Algorithm by Gyulassy et al.	55
3.2.4	Analysis and Comparisons	56
References	57
4	Watershed Algorithms	59
4.1	Watershed by Simulated Immersion	60
4.2	Watershed by Topographic Distance	62
4.3	Watershed by Rain Falling Simulation	64
4.4	Summary and Comparisons	66
References	67
5	A Combinatorial Approach Based on Forman Theory	69
5.1	Representing Morse Complexes in the Discrete Case	70
5.1.1	Representing Discrete Ascending and Descending Morse Complexes	70
5.1.2	Representing the Discrete Morse-Smale Complex	72
5.2	Encoding the Forman Gradient	73
5.2.1	Encoding Triangle and Tetrahedral Meshes	73
5.2.2	Compact Gradient Encoding	74
5.3	Computing the Forman Gradient	75
5.3.1	Forman Approach Based on Connolly's Function	76
5.3.2	A Forman-Based Approach for Tetrahedral Meshes	77
5.3.3	The Algorithm by Gyulassy et al.	78
5.3.4	The Algorithm by Robins et al.	80
5.4	Computing Discrete Morse and Morse-Smale Complexes	81
5.4.1	Descending Morse Complex	82
5.4.2	Ascending Morse Complex	82
5.4.3	Morse-Smale Complex	84
5.4.4	Morse Incidence Graph	84
5.5	Summary and Comparisons	85
References	87
6	Simplification and Multi-Resolution Representations	89
6.1	Simplification Operators	89
6.1.1	<i>cancellation</i> Operator	90
6.1.2	<i>remove</i> Operator	92
6.1.3	Comparison of <i>cancellation</i> and <i>remove</i> Operators	93
6.2	Multi-Resolution Models	94
6.2.1	Models for 2D Scalar Fields	95
6.2.2	A Multi-Resolution Morphological Model for Arbitrary Scalar Fields	96

6.2.3	A Combined Morphological and Geometrical Multi-Resolution Model for Triangulated Terrains	99
6.3	Summary	102
	References	103
7	Experimental Analysis and Comparisons	105
7.1	Different Output Formats	105
7.2	Metrics for Comparison.....	107
7.3	Comparing Watershed and Forman-Based Approaches	108
7.4	Comparing All Approaches in 2D.....	110
7.4.1	Comparison on Models Without Flat Edges.....	110
7.4.2	Handling Flat Edges	110
7.5	Summary	112
	References	115

Morphological Modeling of Terrains and Volume Data

Čomić, L.; De Floriani, L.; Magillo, P.; Iuricich, F.

2014, XI, 116 p. 58 illus., Softcover

ISBN: 978-1-4939-2148-5
