Preface	xi
1 Introduction and statement of the main results	1
1.1 Piecewise linear differential systems	3
1.1.1 Examples	6
1.2 Main results	10
2 Basic elements of the qualitative theory of ODEs	19
2.1 Differential equations and solutions	19
2.1.1 Existence and uniqueness of solutions	19
2.1.2 Prolongability of solutions	21
2.1.3 Dependence on initial conditions and parameters	22
2.1.4 Other properties	23
2.2 Orbits	24
2.3 The flow of a differential equation	25
2.4 Basic ideas in qualitative theory	27
2.5 Linear systems	29
2.5.1 Non-homogeneous linear systems	31
2.5.2 Planar linear systems	32
2.5.3 Planar phase portraits	34
2.6 Classification of flows	36
2.6.1 Classification criteria	37
2.6.2 Classification of linear flows	39
2.6.3 Topological equivalence of non-linear flows	40
2.7 Non-linear systems	42
2.7.1 Local phase portraits of singular points	42
2.7.2 Periodic orbits: Poincaré map	46
2.8 α - and ω -limit sets in the plane	48
2.9 Compactified flows	50
2.9.1 Poincaré compactification	50
2.9.2 The behaviour of a flow at infinity	53

2.10	Local bifurcations	55
2.10.1	Bifurcations from a singular point	56
2.10.2	Bifurcations from orbits	58
3	Fundamental Systems	61
3.1	Definition of fundamental systems	61
3.2	Normal forms	62
3.3	Existence and uniqueness of solutions	62
3.4	Symmetric orbits	64
3.5	Piecewise linear form	64
3.6	Fundamental matrices	65
3.7	Fundamental parameters	67
3.8	Linear conjugacy	68
3.9	Finite singular points	70
3.10	Compactification of the flow	76
3.11	Singular points at infinity	80
3.12	Periodic orbits	111
3.13	Asymptotic behaviour	115
4	Return maps	119
4.1	Poincaré maps for fundamental systems	120
4.2	Transversality of a linear flow	122
4.3	Poincaré maps of homogeneous linear systems	128
4.3.1	Poincaré maps π_{jk}	133
4.3.2	Existence of the Poincaré maps	137
4.3.3	Implicit equations of the Poincaré maps π_{jk}	137
4.4	Qualitative behaviour of the maps π_{jk}	138
4.4.1	Diagonal node: $d > 0$ and $t^2 - 4d > 0$	139
4.4.2	Non-diagonal node: $d > 0$ and $t^2 - 4d = 0$	145
4.4.3	Center and focus: $t^2 - 4d < 0$	150
4.4.4	Saddle: $d < 0$	155
4.4.5	Degenerate node: $d = 0$	161
4.5	Poincaré maps of non-homogeneous linear systems	162
4.5.1	Non-homogeneous linear systems with $A \in GL(\mathbb{R}^2)$	163
4.5.2	Non-homogeneous linear systems with $A \notin GL(\mathbb{R}^2)$	165
4.5.3	Qualitative behaviour of the Poincaré map $\tilde{\pi}_{++}$	168
4.6	Return maps of fundamental systems	174
4.7	Fundamental parameter space	180
5	Phase portraits	189
5.1	Introduction	189
5.2	The case $D > 0$ and $T < 0$	191
5.2.1	Proper fundamental systems	191
5.2.2	Singular points	192

- 5.2.3 Behaviour at infinity 192
 - 5.2.4 Periodic orbits 193
 - 5.2.5 Phase portraits 206
 - 5.2.6 The bifurcation set 216
- 5.3 The case $D > 0$ and $T = 0$ 217
 - 5.3.1 Singular points 217
 - 5.3.2 Behaviour at infinity 219
 - 5.3.3 Annular region of periodic orbits 219
 - 5.3.4 Heteroclinic cycles 222
 - 5.3.5 Phase portraits 223
 - 5.3.6 The bifurcation set 229
- 5.4 The case $D > 0$ and $T > 0$ 231
 - 5.4.1 The bifurcation set 232
- 5.5 The case $D < 0$ and $T < 0$ 232
 - 5.5.1 Proper fundamental systems 234
 - 5.5.2 Singular points 234
 - 5.5.3 Behaviour at infinity 235
 - 5.5.4 Periodic orbits 236
 - 5.5.5 Phase portraits 254
 - 5.5.6 The bifurcation set 271
- 5.6 The case $D < 0$ and $T = 0$ 272
 - 5.6.1 Proper fundamental systems 272
 - 5.6.2 Finite singular points and singular points at infinity 272
 - 5.6.3 Periodic orbits 272
 - 5.6.4 Phase portraits 276
 - 5.6.5 The bifurcation set 277
- 5.7 The case $D < 0$ and $T > 0$ 277
 - 5.7.1 The bifurcation set 280

Bibliography **283**

Index **287**

Introduction to the Qualitative Theory of Differential
Systems

Planar, Symmetric and Continuous Piecewise Linear
Systems

Llibre, J.; Teruel, A.E.

2014, XIII, 289 p. 84 illus., 1 illus. in color., Hardcover
