

Contents

1	Fluorescence and Labelling: How to Choose and What to Do	1
	Natalia Fili and Christopher P. Toseland	
2	Fluorescent Biosensors: Design and Application to Motor Proteins	25
	Simone Kunzelmann, Claudia Solscheid, and Martin R. Webb	
3	Rapid Reaction Kinetic Techniques	49
	Christopher P. Toseland and Michael A. Geeves	
4	Fluorescence to Study the ATPase Mechanism of Motor Proteins . . .	67
	Christopher P. Toseland	
5	Use of Pyrene-Labelled Actin to Probe Actin–Myosin Interactions: Kinetic and Equilibrium Studies	87
	Nancy Adamek and Michael A. Geeves	
6	Fluorescent Methods to Study Transcription Initiation and Transition into Elongation	105
	Aishwarya P. Deshpande, Shemaila Sultana, and Smita S. Patel	
7	Single-Molecule and Single-Particle Imaging of Molecular Motors In Vitro and In Vivo	131
	Natalia Fili	
8	Fluorescence Methods in the Investigation of the DEAD-Box Helicase Mechanism	161
	Alexandra Z. Andreou and Dagmar Klostermeier	
9	Use of Fluorescent Techniques to Study the In Vitro Movement of Myosins	193
	Christopher Toepfer and James R. Sellers	
10	Fluorescence Tracking of Motor Proteins In Vitro	211
	Mark DeWitt, Thomas Schenkel, and Ahmet Yildiz	

11	Measuring Transport of Motor Cargos	235
	Leslie Conway and Jennifer L. Ross	
12	Measuring Two at the Same Time: Combining Magnetic Tweezers with Single-Molecule FRET	253
	Marko Swoboda, Maj Svea Grieb, Steffen Hahn, and Michael Schlierf	
13	Using Fluorescence to Study Actomyosin in Yeasts	277
	Daniel P. Mulvihill	

Fluorescent Methods for Molecular Motors

Toseland, C.P.; Fili, N. (Eds.)

2014, X, 298 p. 88 illus., 49 illus. in color., Hardcover

ISBN: 978-3-0348-0855-2
