

# Contents

|          |   |           |
|----------|---|-----------|
| <b>1</b> | <b>The Origins and the Making of Nanotechnologies . . . . .</b>   | <b>1</b>  |
| 1.1      | A Few Words About the Roots of Nanotechnology in Human Consciousness . . . . .                                      | 1         |
| 1.1.1    | A Little Detail: Systems of Microparticles and Their “Emerging” Properties . . . . .                                | 2         |
| 1.1.2    | A Little Detail: Just One Example from Chemistry . . . . .  | 3         |
| 1.2      | Nanotechnology, Created in the Pages of Science Fiction, Becomes the Basis of a New Industrial Revolution . . . . . | 4         |
| 1.2.1    | More Details: Before Building Something at the Nano-level, One Must Learn to See What One Does . . . . .            | 9         |
| 1.3      | Nanotechnology at the State Level . . . . .   | 17        |
| 1.4      | Nanotechnology Today: Basic Principles and Their Unexpected Incarnations . . . . .                                  | 21        |
| <b>2</b> | <b>Computer Engineering and Nanotechnology . . . . .</b>  | <b>27</b> |
| 2.1      | A Brief History of Computing . . . . .  | 27        |
| 2.1.1    | A Little Detail: The Mechanical Calculators . . . . .   | 28        |
| 2.1.2    | Some Details: von Neumann Paradigm and Its Implementation . . . . .   | 32        |
| 2.2      | Semiconductor Devices: A Revolution in Electronics . . . . .  | 34        |
| 2.3      | Planar Semiconductor Technology: Universal Acceptance and Limitations . . . . .                                     | 42        |
| <b>3</b> | <b>Molecular Elements of Computers . . . . .</b>  | <b>49</b> |
| 3.1      | Preliminary Remarks . . . . .   | 49        |
| 3.1.1    | Some Details: Molecular Structure—Electronic Levels of Atoms and Molecules . . . . .                                | 51        |
| 3.2      | Pioneering Ideas of Molecular Electronics . . . . .   | 58        |
| 3.2.1    | More Details: Molecular Structure—Spatial Configuration of Molecular Nuclei . . . . .                               | 67        |
| 3.3      | Molecular Memory Based on the Protein Bacteriorhodopsin . . . . .   | 81        |

|          |  |            |
|----------|--|------------|
| 3.4      | Storage Devices Based on the Effect of “Hole Burning” in the Absorption Spectra . . . . .              | 85         |
| 3.5      | Molecular Memory: Developer Dream or Reality? . . . . .  | 88         |
| 3.6      | One More Attempt: Chiropticene . . . . .   | 96         |
| <b>4</b> | <b>Seemingly Incompatible: Chemical Reaction–Diffusion Media and Artificial Intelligence . . . . .</b> | <b>99</b>  |
| 4.1      | Information Requirements of the Postindustrial Society and the von Neumann Paradigm . . . . .          | 99         |
| 4.1.1    | Some Details: Structural, Behavioral, and Computational Complexity . . . . .                           | 101        |
| 4.2      | Computer Engineering and the Problem of Artificial Intelligence . . . . .                              | 104        |
| 4.3      | Biologically Inspired Information Processing Devices: Neural Networks and Neurocomputers . . . . .     | 106        |
| 4.4      | The Future of Neurocomputing: The Dubious Legacy of Digital Computers . . . . .                        | 111        |
| 4.5      | Reaction–Diffusion Information Processing Devices . . . . .  | 113        |
| 4.6      | Media of the Belousov–Zhabotinsky Type: A Neural Network Architecture . . . . .                        | 116        |
| 4.6.1    | Some Details . . . . .   | 117        |
| 4.7      | “Emerging” Information Mechanisms . . . . .  | 124        |
| 4.8      | Principles of Information Processing by Reaction–Diffusion Devices . . . . .                           | 125        |
| <b>5</b> | <b>Reaction–Diffusion Processor: Possibilities and Limitations . . . . .</b>                           | <b>127</b> |
| 5.1      | Reaction–Diffusion Processor: Basic Principles . . . . .   | 127        |
| 5.1.1    | Input of Information . . . . .   | 128        |
| 5.1.2    | Information Processing . . . . .   | 130        |
| 5.1.3    | Visualizing (Deriving) the Results of the Problem Solution . . . . .                                   | 131        |
| 5.1.4    | Control and Energy Supply of the Processor . . . . .   | 131        |
| 5.2      | Image Processing by Belousov–Zhabotinsky Media . . . . .   | 136        |
| 5.2.1    | What Is Image Processing . . . . .   | 136        |
| 5.2.2    | Image Processing: Reaction–Diffusion Media and Mathematical Morphology . . . . .                       | 139        |
| 5.2.3    | Images, Optical Illusions, and Reaction–Diffusion Media . . . . .                                      | 149        |
| 5.3      | Reaction–Diffusion Processors: Defining the Shortest Path in a Maze . . . . .                          | 153        |
| 5.3.1    | Characteristics of the Problem of Finding the Shortest Path in the Maze . . . . .                      | 153        |
| 5.3.2    | Basic Solution Principles of the Problem of Finding the Shortest Path in the Maze . . . . .            | 153        |

|          |   |            |
|----------|---|------------|
| 5.3.3    | The Procedure for Finding the Shortest Path in the Maze . . . . .   | 157        |
| 5.3.4    | Effectiveness of the Method . . . . .   | 160        |
| 5.4      | A System of Interconnected Reaction–Diffusion Reactors: Pattern Recognition Devices . . . . .                         | 161        |
| <b>6</b> | <b>Self-Organization: A Common Principle of Information Processing by Distributed Dynamic Systems . . . . .</b>       | <b>167</b> |
| 6.1      | Self-Organization and Its Features in Various Dynamic Systems . . . . .   | 167        |
| 6.2      | Self-Organization Processes and Their Properties . . . . .  | 168        |
| 6.3      | Synergetic Principles of Self-Organization . . . . .  | 174        |
| 6.3.1    | Some Details: The Nonlinearity of the Surrounding World . . . . .   | 177        |
| 6.3.2    | Some Details: Self-Organization, Dissipative and Conservative, Self-Assembly, Stigmergy, etc. . . . .                 | 181        |
| 6.4      | Reaction–Diffusion Processor: A Self-Organizing Dynamic System . . . . .  | 182        |
| <b>7</b> | <b>New Ideas . . . New Opportunities? . . . . .</b>   | <b>185</b> |
| 7.1      | Development of the Biological Principles of Information Processing: Amorphous Computing . . . . .                     | 185        |
| 7.1.1    | Some Details . . . . .  | 189        |
| 7.2      | Semiconductor Reaction–Diffusion Devices: The First Attempts . . . . .  | 192        |
| 7.3      | DNA Computing: A Sophisticated Combination of Principles and “Tools” of Information Processing . . . . .              | 195        |
| 7.3.1    | Some Details . . . . .  | 196        |
| <b>8</b> | <b>What’s Next? . . . . .</b>   | <b>203</b> |
| 8.1      | Do the Developers of Digital Computers with von Neumann Architecture Need Molecular Components? . . . . .             | 203        |
| 8.1.1    | Some Details: Quantum Dots and Cellular Automata . . . . .  | 205        |
| 8.2      | Biological Principles of Information Processing and Their Role in the Development of Information Technology . . . . . | 209        |
| 8.2.1    | Some Operational Requirements for a Reaction–Diffusion Processor . . . . .  | 209        |
| 8.2.2    | Technological Characteristics of Manufacturing Reaction–Diffusion Devices . . . . .                                   | 212        |
| 8.2.3    | Closer to Nature: An Offensive of Polymeric Materials . . . . .   | 212        |
| 8.2.4    | The Brain and the Reaction–Diffusion Computer . . . . .   | 214        |

Molecular Computing

Origins and Promises

Rambidi, N.G.

2014, XIII, 217 p. 143 illus., 34 illus. in color., Hardcover

ISBN: 978-3-211-99698-0
