

Contents

1	Basics	1
1.1	Basic Definitions	1
1.1.1	Complex Numbers	1
1.1.2	Key Concept: Analyticity	2
1.1.3	Contour Integrals	3
1.2	Cauchy Theorem	5
1.2.1	Formulation and Proof	5
1.2.2	Deformation of Contours	6
1.2.3	Cauchy Integral Formula	7
1.2.4	Taylor and Laurent Expansions	8
1.2.5	Liouville Theorem	12
1.2.6	Isolated Singular Points, Residues and Integrals	13
1.3	Branch Cut Integration	20
1.3.1	Multivalued Functions	20
1.3.2	Integrals of the Type $\int_0^\infty x^{a-1} Q(x) dx$	21
1.3.3	Principal Value Integrals	23
1.3.4	Integrals Around Branch Cut Segments	26
1.3.5	Branch Cut Segments: Principal Values	32
1.3.6	Analytic Continuation	35
1.4	Fourier Integral Transform	38
1.4.1	Definition, Inversion, and Dirac δ -Function	38
1.4.2	Analytic and Asymptotic Properties	46
1.4.3	Laplace Integral Transform	55
1.5	Problems	59
2	Hypergeometric Series with Applications	63
2.1	The Gamma Function	63
2.1.1	Definition and Recurrence Relation	63
2.1.2	Analytic Properties	64
2.1.3	Complement Formula	65
2.1.4	Stirling's Formula	67
2.1.5	Euler Integral of the First Kind	67

2.1.6	Duplication Formula	68
2.1.7	Infinite Product Representation	69
2.2	Mellin Integral Transform	72
2.3	Series Expansion	76
2.3.1	Hankel Contour Integral Representation	79
2.4	Hypergeometric Series: Basic Properties	81
2.4.1	Definition and Convergence	81
2.4.2	Special Cases	82
2.4.3	Pochhammer Integral and the Gauss Summation Theorem	86
2.5	Differential Equations	87
2.5.1	Hypergeometric Equation: Solutions Around $z = 0$	87
2.5.2	Solutions Around $z = 1$ and their Relation to Solutions Around $z = 0$	89
2.5.3	Barnes' Integral	90
2.6	Confluent Hypergeometric Series	92
2.6.1	Definition and Differential Equation	92
2.6.2	Integral Representation	94
2.6.3	Special Cases	95
2.7	Generalized Hypergeometric Series	98
2.8	Examples from Mathematical Physics	100
2.8.1	Momentum Distribution Function of Interacting Systems .	100
2.8.2	One-Dimensional Schrödinger Equation	102
2.8.3	Problems which can be Mapped on the Effective 1D Schrödinger Equation	106
2.9	Problems	108
3	Integral Equations	113
3.1	Introduction	113
3.1.1	Classification	113
3.1.2	Resolvent	114
3.2	Product Kernels $k(x, y) = k(xy)$	117
3.2.1	The Fourier Equation	117
3.2.2	Reduction to Integration over the Semiaxis	119
3.2.3	Fox's Equation	121
3.3	Difference Kernels: The Non-singular Case	121
3.3.1	Infinite Interval	122
3.3.2	Wiener-Hopf Technique	127
3.3.3	Exponential Kernel	153
3.4	Singular Integral Equations	164
3.5	Abel's Integral Equation	179
3.6	Problems	182

4	Orthogonal Polynomials	187
4.1	Introduction	187
4.2	Orthogonality Relations	190
4.3	Uniqueness	194
4.4	Gram-Schmidt Orthonormalisation Procedure	195
4.5	Rodrigues' Formula	197
4.6	Generating Functions	201
4.7	Recurrence Relations	207
4.8	Integral Representation of Orthogonal Polynomials	209
4.9	Relation to Homogeneous Integral Equations	212
4.10	Orthogonal Polynomials and Hypergeometric Functions	214
4.11	Problems	216
5	Solutions to the Problems	221
5.1	Chapter 1	221
5.2	Chapter 2	234
5.3	Chapter 3	247
5.4	Chapter 4	262
	Bibliography	281
	Index	283

Lectures on Complex Integration

Gogolin, A.O. - Tsitsishvili, E.G.; Komnik, A. (Eds.)

2014, IX, 285 p. 64 illus., Hardcover

ISBN: 978-3-319-00211-8
