

Contents

1	Introduction to Relativistic Heavy Ion Collisions	1
1.1	Introduction	1
1.2	Variables of a Heavy-Ion Collision	2
1.2.1	Initial State Variables	2
1.2.2	Variables in the Final State	3
1.3	Multiplicity Distribution	6
1.3.1	Centrality Classes	6
1.3.2	Initial Conditions: Glauber Theory	7
1.4	Energy and Entropy Densities	10
1.5	Hanbury-Brown-Twiss Interferometry	11
1.6	Particle Thermal Spectra	14
1.6.1	Radial Flow and Freeze-Out Temperature	16
1.7	Collective Flow and Viscosities	17
1.7.1	Flow Coefficients	18
1.7.2	Experimental Measurement	19
1.7.3	Viscous Hydrodynamic Simulations	24
1.7.4	Extraction of η/s	26
1.7.5	Bulk Viscosity Effects	28
	References	29
2	Boltzmann-Uehling-Uhlenbeck Equation	33
2.1	n -Particle Distribution Functions and Bogoliubov-Born-Green-Kyrkwood-Yvon Hierarchy	33
2.1.1	Classical Description	33
2.2	Kinetic Equation	35
2.2.1	Wigner Function	36
2.3	Chapman-Enskog Expansion	37
2.3.1	Left-Hand Side of the BUU Equation	41
2.4	Conditions of Fit	43
	References	45

3	Shear Viscosity and KSS Coefficient	47
3.1	Shear Viscosity	47
3.1.1	Integration Measure	49
3.2	KSS Coefficient	54
3.2.1	η/s in QGP and Deconfined Phase Transition	59
	References	61
4	Bulk Viscosity	63
4.1	Irrelevance of Inelastic Pion Scattering	64
4.2	Kinetic Theory Calculation of ζ	65
4.2.1	Zero Modes and Fredholm's Alternative	68
4.2.2	Bulk Viscosity and Conditions of Fit	69
4.3	ζ/s in Perturbative QGP	72
	References	73
5	Thermal and Electrical Conductivities	75
5.1	Thermal Conductivity	75
5.1.1	Heat Flow and Fourier's Law	76
5.1.2	Integration Measure	79
5.2	Electrical Conductivity	84
	References	89
6	Bhatnagar-Gross-Krook or Relaxation Time Approximation	91
6.1	Energy-Independent RTA	92
6.2	Quadratic <i>Ansatz</i>	95
	References	97
7	Strangeness Diffusion	99
7.1	Mixed Hadron Gas with Pions and Kaons	99
7.2	Diffusion Equation	100
7.3	Scattering Amplitude from $SU(3)$ IAM	105
7.4	Diffusion Coefficient	105
	References	107
8	Charm Diffusion	109
8.1	D-meson Spectrum	110
8.2	Fokker-Planck Equation	111
8.3	Effective Lagrangian with ChPT and HQET	115
8.3.1	$D - \pi$ Tree-Level Scattering Amplitudes	117
8.3.2	On-shell Unitarization	119
8.4	Results	122
8.4.1	Low-energy Constants and Cross Sections	122
8.4.2	Diffusion and Drag Coefficients	126
	References	132

9	Linear Sigma Model and Phase Transitions.	135
9.1	$L\sigma M$ Lagrangian and Effective Potential	
	at Finite Temperature	135
9.1.1	Spontaneous Symmetry Breaking at $T = 0$	136
9.1.2	Auxiliary Field Method.	139
9.2	Effective Potential at $T \neq 0$	141
9.3	Scattering Amplitude	147
9.4	Shear Viscosity Over Entropy Density	149
9.4.1	Validity of Transport Equation.	150
9.5	Bulk Viscosity Over Entropy Density	151
	References	151
10	Measurement of the Bulk Viscosity	153
10.1	Fluctuations and Correlations of the Stress-Energy Tensor.	153
10.1.1	Local Rest Frame	154
10.1.2	Boosted Fluid Element	158
10.2	Kinematic Cuts	161
	References	164
11	Conclusions	167
	Appendix A: Relativistic Hydrodynamics	171
	Appendix B: Unitarized Chiral Perturbation Theory	179
	Appendix C: Moments of the Distribution Function	191
	Appendix D: Second-Order Relativistic Fluid Dynamics	195
	Appendix E: Langevin Equation for Charm Diffusion	199
	Appendix F: Numerical Evaluation of the Collision Integral	207
	Curriculum Vitae and Publication List.	211
	Index	213

Hadronic Transport Coefficients from Effective Field
Theories

Torres-Rincon, J.M.

2014, XIX, 215 p. 68 illus., 20 illus. in color., Hardcover

ISBN: 978-3-319-00424-2
