
Contents

- 1. Long-term Climate Change**
 - 1.1 Weather and Climate
 - 1.2 Time Scales to Characterize Climate
 - 1.3 Factors That Affect Long-Term Climate
 - 1.4 Ancient Climates and CO₂ Concentration
- 2. Temperatures During the Past Few Millennia**
 - 2.1 Use of Proxies to Estimate Historical Temperatures
 - 2.2 Proxies and Climate
 - 2.3 The Little Ice Age and the Medieval Warm Period
 - 2.4 Global and Hemispheric Average Temperatures in Recent Millennia
 - 2.5 Conclusionson Millennium Temperature History
- 3. Temperatures in the Past Century**
 - 3.1 Near-surface Land Measurements
 - 3.2 Ocean Temperature Measurements.
 - 3.3 Troposphere Temperature Measurements
 - 3.4 Measured Earth,Regional,and Local Surface Temperatures
 - 3.5 Mountain Glaciers as Climate Indicators.
 - 3.6 Antarcticand Arctic Temperatures
 - 3.7 Ocean Temperatures
 - 3.8 Utility of a Single Global Temperature.
- 4. Global Scares, Subjective Science, and Climatologists.**
 - 4.1 Global Scares
 - 4.2 Dealing with Subjective Science
 - 4.3 Hyperboleon Impacts of Global Warming
 - 4.4 Spreading the Gospel.
 - 4.5 Climatologists.
 - 4.6 The Golden Rule
 - 4.7 The Lunatic Fringe
 - 4.8 The Role of Google

5. Variability of the Sun
5.1 Solar Irradiance
5.2 Aspects of Solar Variability
5.3 The Maunder Minimum: John Eddy's Study
5.4 Historical Sunspot Levels and Recent Solar Inactivity
5.5 Solar Cycle Duration
5.6 Reconstructing TSI in the Past
5.7 Conclusionson TSI
5.8 Solar Intensity at Ground Level
6. The Earth's Heat Balance and the Greenhouse Effect
6.1 The Greenhouse Effect
6.2 The Earth's Heat Balance
6.3 Climate Variability
6.4 Global Climate Models
6.5 The Relation Between Ancient Climates and CO ₂ Concentration
7. Anthropogenic Influences on Climate Change
7.1 CO ₂ Concentration Past and Present
7.2 Projections of Future CO ₂ Concentration by Climatologists
7.3 Black Carbonas a Source Of 20th-Century Global Warming
7.4 Role of Sulfate Aerosols
7.5 Land Clearing and Surface Development
8. Impacts of Global Warming
8.1 Alarmists and Skeptics
8.2 Future Increases in Global Temperature
8.3 Sea Level Rise, the Ice Sheets, and Sea Ice
8.4 Chanes in Precipitation: Floods, Drought, and Storms
8.5 Species Extinction
8.6 Vegetation
8.7 Coral Reefs
8.8 Food Production
9. Global Climate Change and Public Policy
9.1 U.S. Government Policy Actions and Inactions
9.2 The Kyoto Protocol
9.3 Economics: Will it Cost More to do Nothing?
9.4 Economic Analyses
9.5 Renewable Energy
9.6 Pirila's Summary

10. Final Remarks
 10.1 Conclusions
 10.2 The Nine Questions.
 10.3 About Climatologyand Climatologists.
 10.4 Logical Fallacies Used in Climate Discussions
Appendix I: Review of the Film an Inconvenient Truth
 Appendix II: Warming of Oceans by Increases in Greenhouse Gas Concentrations
 in the Atmosphere.....
