Part I Wind-Induced Three-Dimensional Currents: Numerical Models and Applications

23 Barotropic Wind-Induced Motions in a Shallow Lake 5
23.1 Introduction 6
23.2 Mathematical Prerequisites 8
23.2.1 Boundary Value Problem of the One-Layer Model for the Water Transport and the Free Surface Displacements 8
23.2.2 The Barotropic Multi-Layer Model 11
23.3 The Water Transport in the Homogeneous Lake Zurich: Results of the 8-Layer Model 15
23.3.1 West-Wind 16
23.3.2 Wind From East, South, North and South-East 18
23.3.3 Delineation of the Validity of One-Layer Models 24
23.4 Concluding Discussion 32
References 33

24 Response of a Stratified Alpine Lake to External Wind Fields: Numerical Prediction and Comparison with Field Observations 35
24.1 The Problem Setting 37
24.2 Governing Equations 40
24.2.1 Field Equations for a Boussinesq Fluid 40
24.2.2 The Hydrostatic Approximation of the Boussinesq-Type Field Equations 42
24.2.3 Turbulent Closure Conditions 43
24.2.4 Boundary Conditions 44
24.3 Approximate Treatments of the Model Equations 45
24.3.1 Discretization Procedure 45
24.3.2 The Baroclinic Multi-Layer Model 47

24.4 An Almanac of Tests 52
24.4.1 Selection of the Standard Test Conditions 52
24.4.2 Inferences From Tests 1 to 4 53
24.4.3 The Role of the Horizontal Momentum Exchange 59
24.4.4 Influence of the Horizontal Grid Size 65
24.4.5 Influence of the Vertical Momentum Exchange 70
24.4.6 Effects of Coriolis Force, Momentum Advection and Stratification 74
24.5 Comparison of Model Output with Field Observations of 1978 Lake Zurich Campaign 76
24.6 Discussions and Conclusion 88
References 89

25 Comparing Numerical Methods for Convectively-Dominated Problems 91
25.1 Preview and Attempt of a Judicious Evaluation of Numerical Methods in Lake Dynamics 92
25.2 A Series of Numerical Methods 94
25.2.1 Central Difference Scheme 96
25.2.2 Upstream Difference Scheme 99
25.2.3 Lax-Friedrichs Scheme 101
25.2.4 Second-Order Upstream Scheme (2UDS) and Fromm's Method 101
25.2.5 QUICK Scheme 103
25.2.6 Lax-Wendroff and Beam-Warming Schemes 105
25.2.7 Flux Corrected Transport 105
25.2.8 Total Variation Diminishing 107
25.3 Comparison of Some Numerical Results 111
25.3.1 A Linear Convection Problem: Travelling Shock Wave 111
25.3.2 A Convection-Diffusion Problem 115
25.3.3 A Non-Linear Convection Problem 119
25.3.4 Deformation of Temperature Profile Caused by Vertical Convection in Stratified Lakes 122
25.4 Concluding Remarks 124
References 125

26 Comparing Different Numerical Treatments of Advection Terms for Wind-Induced Circulations in Lakes 129
26.1 Computation in Environmental Fluid Mechanics: Finding the Needle in a Haystack 130
26.2 Basic Equations and Model Descriptions 134

26.3 Numerical Methods. 138
26.3.1 Diffusion Terms: A Central Difference Treatment . . . 141
26.3.2 Advection Terms: Three Kinds of Difference Schemes 142
26.4 Numerical Results of Wind-Induced Circulations in a Rectangular Basin with Constant Depth 146
26.4.1 Homogeneous Water. 147
26.4.2 Stratified Water 150
26.5 Numerical Results of Wind-Induced Circulations in Lake Constance 158
26.5.1 Homogeneous Water. 159
26.5.2 Stratified Water 161
26.6 Concluding Remarks. 168

27 Subgrid-Scale Parameterization in Numerical Simulations of Lake Circulation 173
27.1 Turbulent Parameterization: A Journey Past Scylla and Charybdis 174
27.2 A Subgrid-Scale Parameterization. 176
27.2.1 Horizontal Turbulence Closure Mixing 176
27.2.2 Vertical Turbulence Closure for Mixing 178
27.3 Numerical Results and Discussions. 180
27.3.1 Results for a Rectangular Basin 181
27.3.2 Results for Lake Constance 187
27.4 Internal Seiches: An Eigenvalue Problem of the Two-Layer Model 197
27.5 Review and Outlook 202
References 203

Part II Observation, Measurements and Laboratory Experiments

28 Instruments and Sensors. 213
28.1 Measurement of Water Currents. 214
28.1.1 Current Meters. 215
28.1.2 Buoys, Floats, Tracers, Profilers. 226
28.2 Measurement of Water Temperature, Electrical Conductivity and Density 231
28.2.1 Main Principles of Operation of Temperature Sensors. 235
28.2.2 Salinity Measurements 237
28.2.3 Density Measurements and Calculations 240

28.3 Water Level and Water Depth Measurement 245
28.3.1 Water Level Elevation 245
28.3.2 Measurement of the Water Depth 251
28.4 Optical Measurements 252
28.4.1 The Optical Properties of Natural Water and the Distribution of the Field of Light 253
28.4.2 Instruments for Optical Measurements 261
28.5 Measurement of Turbulence 267
28.5.1 Turbulence in Lakes 267
28.5.2 Instruments 274
References 280

29 Measuring Methods and Techniques 285
29.1 Stationary Instruments 287
29.1.1 Anchored Buoy Stations: Moorings 287
29.1.2 Lake Diagnostic Systems 291
29.1.3 Bottom Gradient Stations 292
29.2 On-Board Methods: Towing, Profiling, Sounding 293
29.3 Drifter-Based Measurements 298
29.4 Sampling Method 301
29.4.1 Concluding Remarks 305
References 306

30 Dimensional Analysis, Similitude and Model Experiments 307
30.1 Introductory Motivation 311
30.1.1 Dimensional Analysis 311
30.1.2 Similitude and Model Experiments 313
30.1.3 Systems of Physical Entities 315
30.2 Theory of Dimensional Equations 317
30.2.1 Dimensional Homogeneity 317
30.2.2 Buckingham's Theorem 320
30.2.3 Two Hydraulic Examples 326
30.3 Application to Hydrodynamic Problems 329
30.3.1 Instability of Stratified Shear Flows 329
30.3.2 Wave Theory in Stratified Shear Flows 335
30.3.3 Self-Similar Structures in Turbulent Boundary Layers at Large Reynolds Numbers 345
30.3.4 Dispersion of an Oil Spill on a 'Still' Water Surface 349
30.4 Theory of Physical Models 350
30.4.1 Analysis of the Downscaling of Physical Processes 351
30.4.2 Applications 357

30.5 Model Theory and Differential Equations 360
30.5.1 Navier-Stokes-Fourier-Fick Equations 360
30.5.2 Non-Dimensionalization of the NSFF Equations. 366
30.6 Physical Hydrodynamic Models 370
30.6.1 Background 370
30.6.2 Physical Conditions for Tidal Models 371
30.6.3 Rotating Laboratory Study of Lake Constance 375
30.7 Discussion and Conclusion 392
References 394

Part III Detritus and Particle Laden Transport in Lakes

31 Prograding and Retrograding Hypo- and Hyper-Pycnal Deltaic Formations into Quiescent Ambients 401
31.1 Introduction: Estuarine Development Due to Riverine Sediment Inflow 404
31.1.1 Fluvio-Deltaic Sedimentation in Lakes From Rivers 404
31.1.2 Morpho-Dynamics of Hypo-, Homo- and Hyper-Pycnal Flows 406
31.2 Sediment Transport in the River. 408
31.3 Similarity Solution for the Homogeneous Diffusion Equation 413
31.3.1 Bedrock-Alluvial Transition. 416
31.3.2 Overtopping Failure of a Dam 420
31.4 Hypopycnal (Gilbert-Type) Deltas 421
31.4.1 The Classical Stefan Problem. 425
31.4.2 Prograding Deltas. 428
31.4.3 Fluvial ‘Grade’ in River-Lake Systems 429
31.4.4 Experimental Verification 437
31.5 Hyper-Pycnal Deltas 440
31.5.1 Foreset Diffusion Model 442
31.5.2 Combined Topset-Foreset Diffusion Process for Hyper-Pycnal Deltas 444
31.6 Laboratory Experiments 454
31.6.1 Progradation of Hyper-Pycnal Deltas 455
31.6.2 Reservoir Infill by Hypo- and Hyperpycnal Deltas Over Bedrock. 459
31.7 Formation and Evolution of Tributary Dammed Lakes 464
31.7.1 Introduction 464
31.7.2 Theory 467
31.7.3 Experiments. 472

31.8 Discussion and Conclusions 476
References 482

32 Sediment Transport in Alluvial Systems 487
32.1 Description of the Sediment Transport Model 494
32.2 Governing Equations in Lake Domain I 498
32.2.1 Laminar Flow 499
32.2.2 Turbulent Motion 503
32.2.3 Boussinesq and Shallow Water Approximations in Model 2. 516
32.2.4 Boussinesq and Hydrostatic Pressure Assumption in Model 2. 524
32.3 A Primer on Boundary and Transition Conditions 527
32.3.1 Kinematic Surface Condition 531
32.3.2 Dynamic Surface Jump Conditions 532
32.3.3 Surface Balance Laws. 534
32.4 Boundary Conditions: A Simple Model of Detritus Layer 539
32.4.1 Boundary Conditions at the Free Surface. 539
32.4.2 Boundary Conditions at the Rigid Bed 542
32.5 Transformation of the Surface Mass Distribution into a Detritus Layer Thickness 558
32.6 Discussion and Conclusion 560
